¹Unadjusted associations (β estimates and 95% CI) of infant, maternal, sociodemographic, or environmental factors with mother's milk fatty acid composition standard deviation scores. A negative sign indicates a negative association for continuous variables (gestational age, lactation stage, and maternal age) or lower than the listed reference value for categorical variables (all others). Sample size is 100 mothers, 472 human milk samples. Associations were analyzed using PROC MIXED accounting for repeated measures using an autoregressive correlation structure. Estimates in **bold** type represent associations that remain significant after adjusting for multiple testing ($p<0.007$) while those in red are associated with p -values <0.05 .

Alpha linolenic acid (ALA), Arachidonic acid (ARA), Docosahexaenoic acid (DHA), Docosapentaenoic acid (DPA), Eicosapentaenoic acid (EPA), Female (F), Dihomo gamma linolenic acid (DGLA), Gamma linolenic acid (GLA), Linoleic acid (LA), Monounsaturated fatty acid (MUFA), Polyunsaturated fatty acid (PUFA), Saturated Fatty Acids (SFA), Standard deviation scores (SDS).

¹Adjusted associations (β estimates) of infant, maternal, sociodemographic, or environmental factors with mother's milk fatty acid composition standard deviation scores. Associations were analyzed using PROC MIXED accounting for repeated measures using an autoregressive correlation structure, adjusting for maternal pre-pregnancy BMI (underweight [$<18.5 \text{ kg/m}^2$], normal weight [18.6-24.9], overweight [25.0-29.9] or obese [≥ 30]), maternal education (post-secondary vs none), maternal ethnicity (East or Southeast Asian, South or West Asian European, African or Caribbean, or Other), family income above or below the family size-adjusted Ontario poverty line (y/n), smoking (y/n), and timing of sample collection (weeks). A negative sign indicates a negative association for continuous variables (gestational age, lactation stage, and maternal age) or lower than the listed reference value for categorical variables (all others). Sample size is 99 mothers, 469 human milk samples (one subject not included from the unadjusted due to

Hopperton *et al.* Determinants of fatty acid content and composition of human milk fed to infants born <1250g - Online

¹Unadjusted means (categorical variables) and β estimates + intercepts (continuous variables) of infant, maternal, sociodemographic, or environmental factors with mother's milk fatty acid composition standard deviation scores. A negative sign indicates a negative association. Values in **bold** indicate a statistically significant association for continuous variables or significant difference from the top

Hopperton *et al.* Determinants of fatty acid content and composition of human milk fed to infants born <1250g - Online

Supplementary Material

(reference) category for categorical variables ($p<0.05$). Sample size is 100 mothers, 472 human milk samples. Associations were analyzed using PROC MIXED accounting for repeated measures using an autoregressive correlation structure.

Alpha linolenic acid (ALA), Arachidonic acid (ARA), Docosahexaenoic acid (DHA), Docosapentaenoic acid (DPA), Eicosapentaenoic acid (EPA), Female (F), Dihomo gamma linolenic acid (DGLA), Gamma linolenic acid (GLA), Linoleic acid (LA), Monounsaturated fatty acid (MUFA), Polyunsaturated fatty acid (PUFA), Saturated Fatty Acids (SFA), Standard deviation scores (SDS).

¹Simulated diet based on mean fat and fatty acid contents (g/dl) of pooled donor human milk batches fed during the OptiMoM study (n=53) and mother's own milk (n=100 mothers) fed at full enteral feeding volumes (160 ml/kg/day). Colostrum was collected on post-partum days 1-4, transitional milk (days 8-14), early-mature milk (days 15-40), later-mature milk (>40 days).

Alpha linolenic acid (ALA), Arachidonic acid (ARA), Docosahexaenoic acid (DHA), Docosapentaenoic acid (DPA), Eicosapentaenoic acid (EPA), Dihomo gamma linolenic acid (DGLA), Gamma linolenic acid (GLA), Linoleic acid (LA), Mother's own Milk (MoM), Monounsaturated fatty acid (MUFA), Polyunsaturated fatty acid (PUFA), Saturated fatty acids (SFA).

¹Difference in intakes calculated for a subset of infants in the OptiMoM study at weeks 1 and 2 of life (n=13, days 1-14) and week 4 (n=31, days 22-28) not receiving parenteral nutrition, and in the bovine milk-based fortifier group between those receiving >50% donor milk and 100% mother's milk. Associations were analyzed using PROC MIXED accounting for repeated measures using an autoregressive correlation structure. Bold values indicated statistically significant differences in β estimates (p<0.05).

²Estimates adjusted only for repeated measurements within subjects.

Alpha linolenic acid (ALA), Arachidonic acid (ARA), Docosahexaenoic acid (DHA), Donor milk (DM) Docosapentaenoic acid (DPA), Eicosapentaenoic acid (EPA), Dihomo gamma linolenic acid (DGLA), Gamma linolenic acid (GLA), Linoleic acid (LA), Mother's own Milk (MoM), Monounsaturated fatty acid (MUFA), Polyunsaturated fatty acid (PUFA), Saturated fatty acids (SFA).
