

SUPPLEMENTARY FIGURES

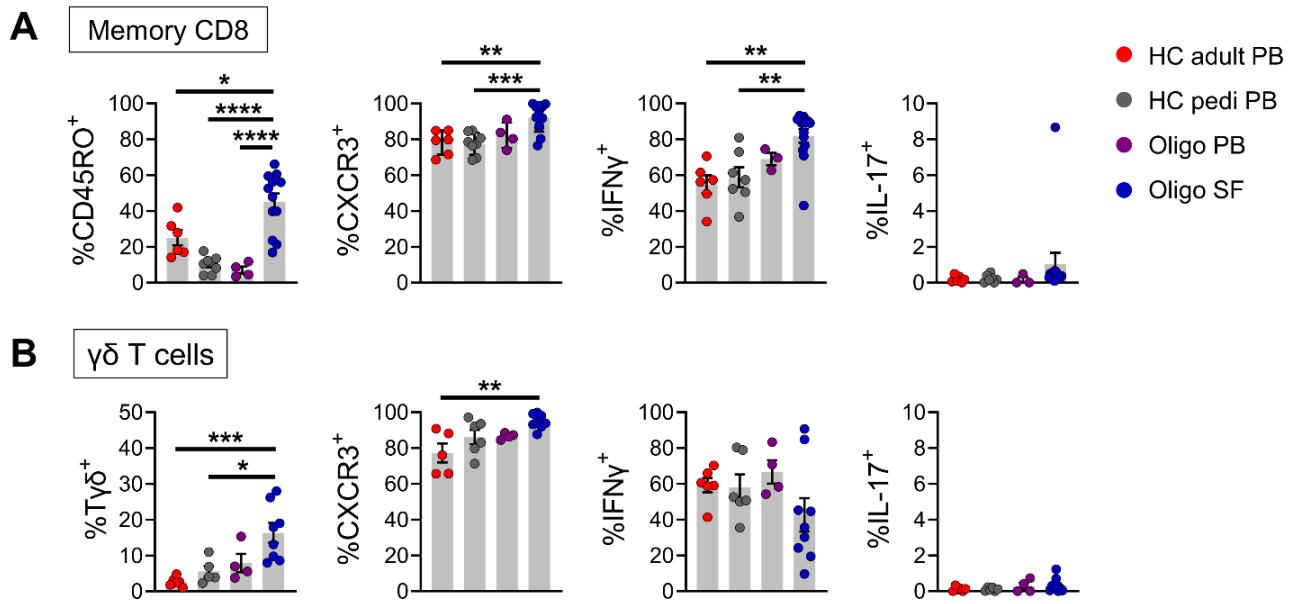

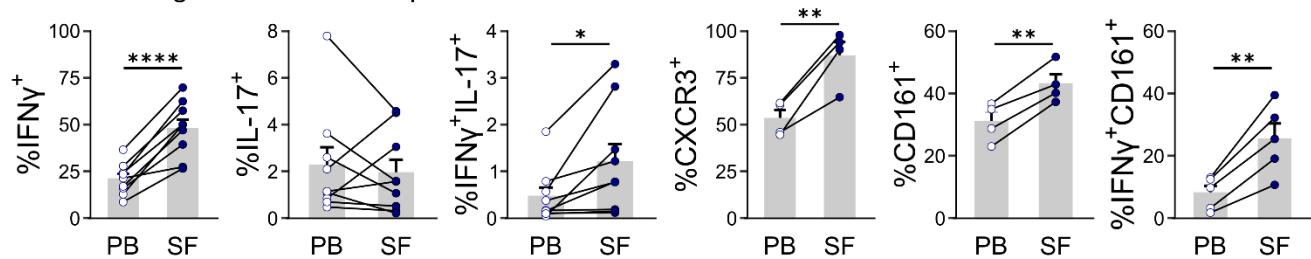

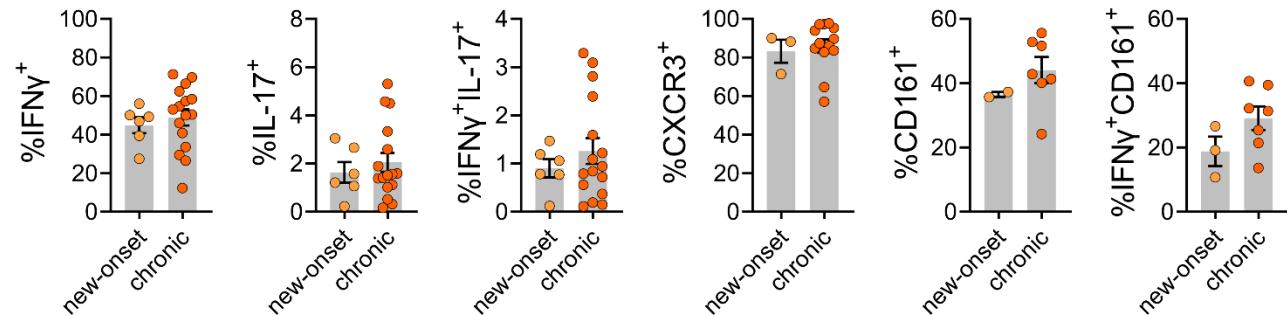

Figure S1: CD8 memory T cells and γδ T cells are enriched in the SF of oligo JIA patients, and upregulate Th1 markers.

A) Percent of total CD8⁺ T memory (Tmem, CD3⁺CD8⁺CD45RO⁺) cells among total CD8⁺ T cells and of CD8⁺ Tmem expressing different cytokines and chemokines in the SF of oligo JIA patients (n=12-13) and in the PB of patients (n=3-4) and controls (adult: n=6, pediatric: n=7-8). B) Percent of total γδ T lymphocytes (CD3⁺Tyδ⁺) and of γδ T cells expressing different cytokines and chemokines in the SF of oligo JIA patients (n=8-9) and in the PB of patients (n=4) and controls (adult: n=5-6, pediatric: n=5-6). HC, healthy control; pedi, pediatric; oligo, oligoarticular juvenile idiopathic arthritis; PB, peripheral blood; SF, synovial fluid. Summary data on all bar graphs are mean ± standard error. P-value <0.05 (*); <0.01 (**), <0.001 (***)<0.0001 (****). Statistical testing: one-way ANOVA followed by multiple t-tests with Turkey correction.

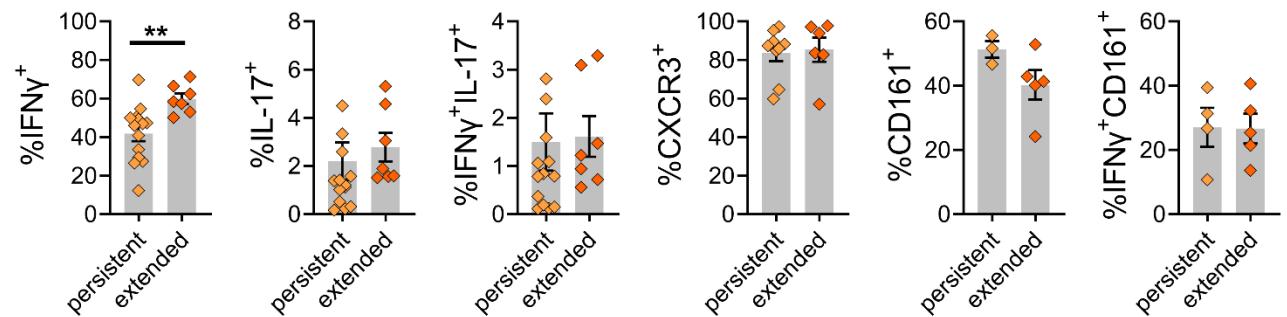

A Paired oligo PB and SF samples

B New-onset oligo SF vs. Chronic oligo SF

C Persistent oligo SF vs. Extended oligo SF

D ANA- oligo SF vs. ANA+ oligo SF

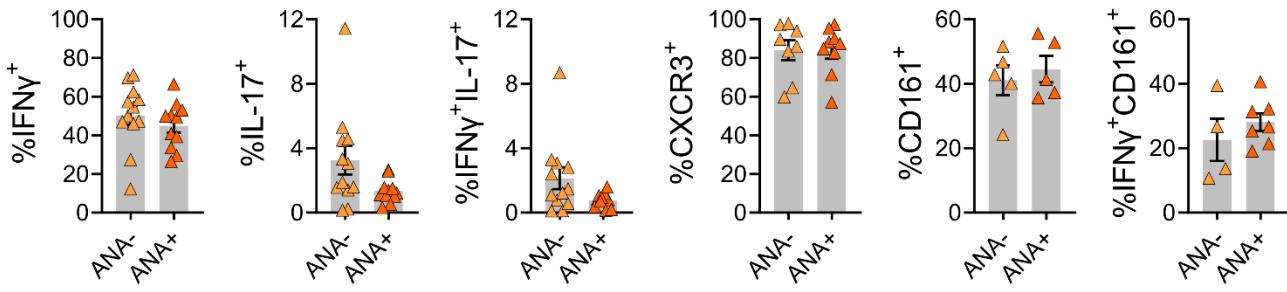

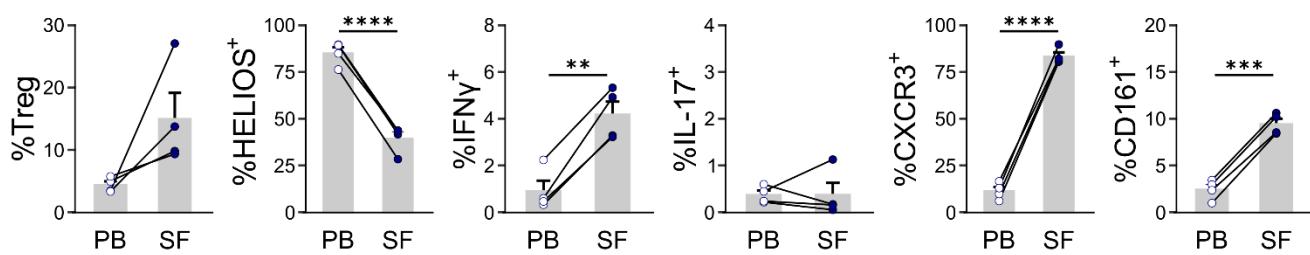

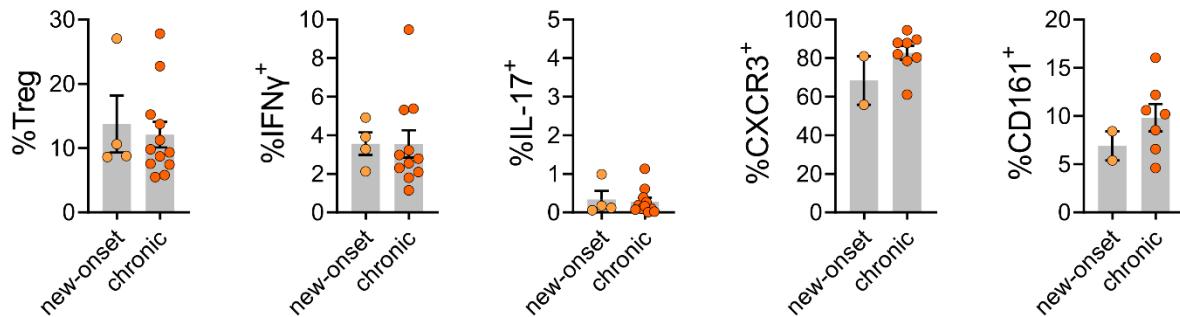

Figure S2: Th1 polarization of CD4⁺ Tmem cells in the SF of new-onset and chronic oligo JIA patients. A) Percent of CD4⁺ Tmem cells expressing different cytokines and chemokines in paired PB and SF samples from oligo JIA patients (n=4-9). B) Percent of CD4⁺ Tmem cells expressing different cytokines and chemokines in oligo JIA SF samples obtained at disease onset (n=2-5) or in chronic disease phase (n=7-16). C) Percent of CD4⁺ Tmem cells expressing different cytokines and chemokines in the SF of patients progressing to persistent (n=3-13) or extended (n=5-7) forms of oligo JIA. D) Percent of CD4⁺ Tmem cells expressing different cytokines and chemokines in the SF of oligo JIA patients with (n=5-11) or without (n=4-12) antinuclear autoantibody (ANA). All analyses were gated on CD3⁺CD4⁺CD45RO⁺ cells (CD4⁺ Tmem). PB, peripheral blood; SF, synovial fluid; oligo, oligoarticular juvenile idiopathic arthritis; ANA, antinuclear autoantibody. Summary data on all bar graphs are mean ± standard error. P-value <0.05 (*); <0.01 (**), <0.001 (***) <0.0001 (****). Statistical testing: Paired (a) and unpaired (b and c) t-tests.

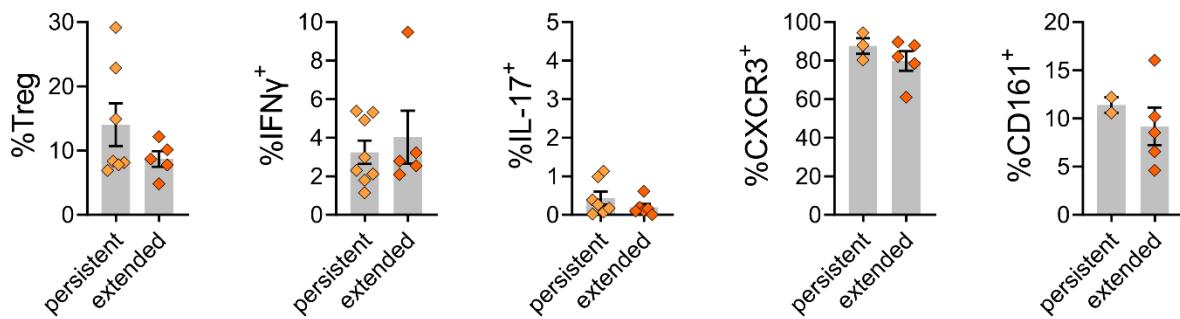

A Paired oligo PB and SF samples

B New-onset oligo SF vs. Chronic oligo SF

C Persistent oligo SF vs. Extended oligo SF

D ANA- oligo SF vs. ANA+ oligo SF

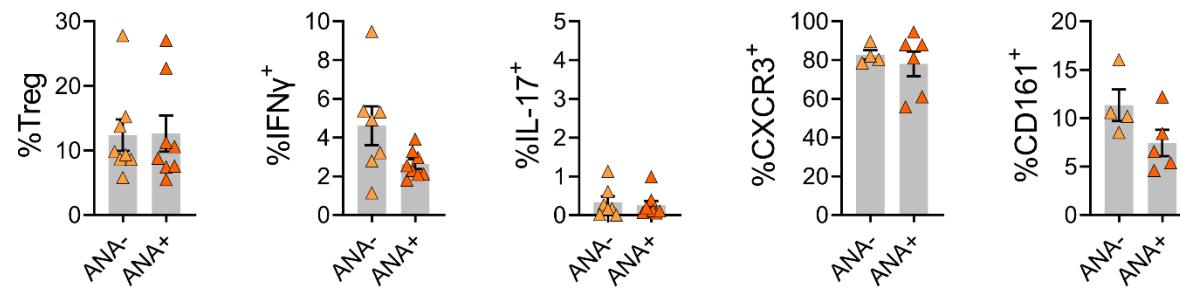

Figure S3: Th1 polarization of regulatory T (Treg) cells in the SF of new-onset and chronic oligo JIA patients. A) Percent of total Treg (CD25⁺CD127^{lo}FOPX3⁺) among CD4⁺ T cells, and of Treg cells expressing different cytokines and chemokines in paired PB and SF samples from oligo JIA patients (n=4). B) Percent of total Treg (CD25⁺CD127^{lo}FOPX3⁺) among CD4⁺ T cells, and of Treg cells expressing different cytokines and chemokines in oligo JIA SF samples obtained at disease onset (n=2-4) or in chronic disease phase (n=7-12). C) Percent of total Treg (CD25⁺CD127^{lo}FOPX3⁺) among CD4⁺ T cells and of Treg cells expressing different cytokines and chemokines in the SF of patients progressing to persistent (n=2-8) or extended (n=5) forms of oligo JIA. D) Percent of total Treg (CD25⁺CD127^{lo}FOPX3⁺) among CD4⁺ T cells and of Treg cells expressing different cytokines and chemokines in the SF of oligo JIA patients with (n=5-8) or without (n=4-8) antinuclear autoantibody (ANA). PB, peripheral blood; SF, synovial fluid; oligo, oligoarticular juvenile idiopathic arthritis; ANA, antinuclear autoantibody. Summary data on all bar graphs are mean ± standard error. P-value <0.05 (*); <0.01 (**), <0.001 (***) <0.0001 (****). Statistical testing: Paired (a) and unpaired (b and c) t-tests.

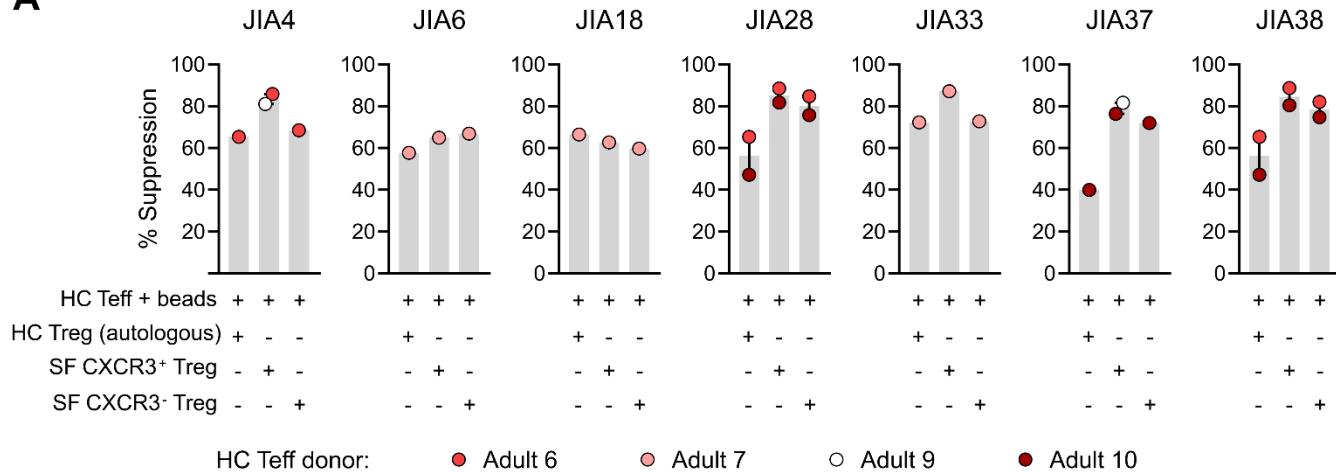

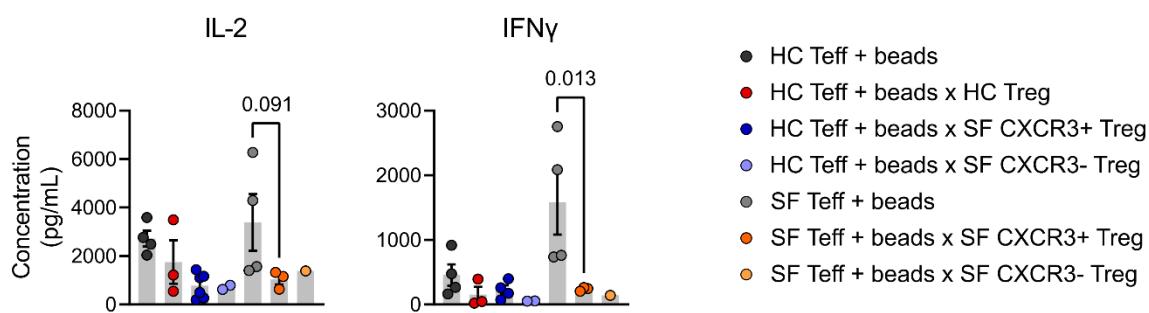

A**B**

Figure S4: Th1-like Tregs maintain the ability to suppress Teff proliferation and cytokine production. A) Per patient percent suppression (mean \pm standard error) in the proliferation of Teff cells (CD4⁺CD25⁻) from a third-party control after co-culture at a ratio of 1:1 with autologous PB Tregs (CD4⁺CD25⁺CD127^{lo}), oligo JIA CXCR3⁺ SF Tregs or oligo JIA CXCR3⁻ SF Tregs. Given the small number of subjects in each experiment, statistical testing was not preformed. B) Cytokine concentration (pg/mL, mean \pm standard error) detected in the supernatant of suppression assay co-cultures. Teffs from healthy controls were stimulated with anti-CD2/CD3/CD28 beads alone or co-cultured at a ratio of 1:1 with autologous Tregs, oligo JIA CXCR3⁺ SF Tregs, or oligo JIA CXCR3⁻ SF Tregs. Similarly, oligo JIA SF Teffs were stimulated with beads and co-cultured at a ratio of 1:1 with autologous oligo JIA CXCR3⁺ SF Tregs or oligo JIA CXCR3⁻ SF Tregs. The depicted data represents 4 independent experiments conducted with 4 healthy controls and 5 oligo JIA patients. HC, healthy control; oligo, oligoarticular; JIA, juvenile idiopathic arthritis; PB, peripheral blood; SF, synovial fluid. Statistical testing: one-way ANOVA followed by selected t-tests with Turkey correction.

SUPPLEMENTARY TABLES

Table S1: Clinical Characteristics of the Study Participants and Samples Contributed to the Studies.

Subject	Sample	Group	JIA subtype		Sex	Age (yrs)		Joint involvement		ANA	Uveitis	Treatment at sampling	Flow	RNA-seq	Other

Table S3: Location of CpG sites analyzed in methylations studies.

Locus	Region	Position*	CpG count
<i>FOXP3</i>	Treg-specific demethylation region (CNS2 region)	-2330 to -2263	9
<i>CTLA4</i>	Exon 2	2651 to 2757	5
<i>IKZF2</i>	Intron 4	27732 to 27748	3
<i>IKZF4</i>	Intron 5	1969 to 2083	2
<i>IL2RA</i>	Intron 1	24448 to 24517	4

* Positions are specified counting from the ATG translation start codon.

Table S4: Significant hits in independent Gene Set Enrichment Analyses (GSEA) of SF Tregs versus PB Tregs and SF Teffs versus PB Teffs. Tregs ($CD4^+CD25^+CD127^{lo}$) and Teffs ($CD4^+CD25^-$) were sorted from paired SF and PB samples of JIA patients (n=14) and from the PB of pediatric (n=5) and adult (n=4) controls for bulk RNA-sequencing. The normalized enrichment score (NES), adjusted p-value and q-values as estimated by clusterProfiler are reported for significantly enriched pathways or gene sets, ranked from highest to lowest NES in the SF Treg compartment. DESeq2-estimated and rank-corrected log2 fold changes (LFC) in gene expression values served as input for a cutoff-free GSEA, run in R with clusterProfiler version 3.14.3. GSEA compared sequencing data to the Reactome database (immune system and metabolism subsets), the human Treg gene set described in Ferraro (2014) and the mouse peripheral/induced Treg gene set described in Hill (2007). n.s., not significant.

Pathway ID	Pathway or Gene set description	NES (Teff)	NES (Treg)	P-value (Teff)	P-value (Treg)	Q-values (Teff)	Q-values (Treg)
