

A

B

Supplementary Figure Evaluating the relationship between miR-342-5p overexpression and BCR mRNA expression. (A) Correlation between GSVAscore of miR-342-5p upregulated gene signature and normalized mRNA expression of BCR and ABL1 in clinical databases. The correlation was evaluated using Spearman correlation. (B) Bar chart presenting the impact of miR-342-5p overexpression on BCR mRNA level analyzed by qPCR. One-way ANOVA was used to assess the significance of statistical differences.
