

Fig. S5. Localization of IL33-expressing cells in adult iWAT.

A,B) Representative 63x magnification confocal immunofluorescence images of iWAT from wildtype mice housed at room temperature. Sections were stained with anti-CD31 (green) and anti-IL-33 (red) antibodies and counterstained with DAPI (blue). Composite images were generated by digital overlay. Panels in **A)** highlight perivascular localization of IL-33 expression. Panels in **B)** highlight presence of IL-33 in cells of the reticular interstitium surrounding the iWAT depot.
