

Supplemental Fig. 1 Tyrosine phosphorylation of IRS2 in olfactory neuronal cells after insulin stimulation

Olfactory neuronal cells derived from healthy controls were stimulated with different concentrations of insulin and characterized for the level of tyrosine phosphorylation of IRS2 (pIRS2). In this experiment, we demonstrated that the linearity of the signal (the level of tyrosine phosphorylation of IRS2) occurs between the insulin concentrations of 0 and 30 nM, which is indicated by a dotted line on the graph. Thus, we used 10 nM insulin for all experiments to be within the linear range of the pIRS2 signal.

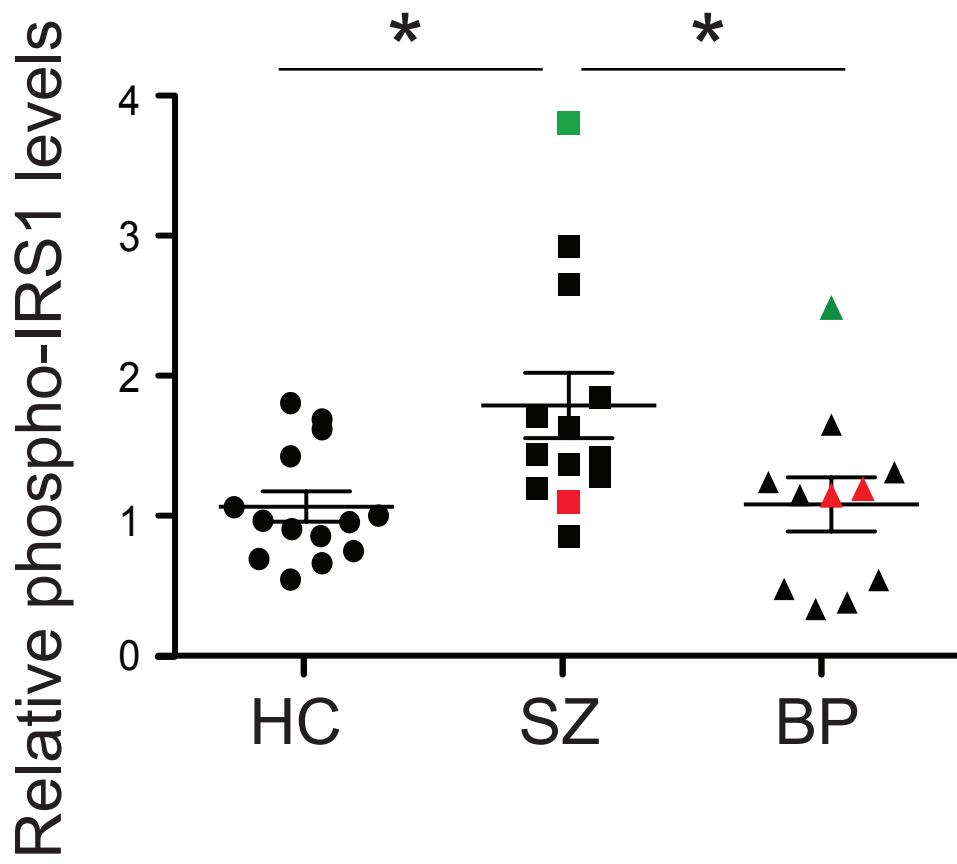

Supplemental Fig. 2 Tyrosine phosphorylation of IRS2 in olfactory neuronal cells after excluding pre-diabetic and diabetic patients from the analysis (see Figure 2 including all the patients)

Olfactory neuronal cells derived from patients with SZ or BP as well as those from healthy controls (HC) were stimulated with insulin and characterized for the level of tyrosine phosphorylation of IRS2. Data are shown as mean \pm SEM. * P=0.0133 (one-way ANOVA, followed by Bonferroni's multiple comparison test). Though one SZ patient who was pre-diabetic and 2 BP patients who had diabetes at the time of the nasal biopsy were excluded from this analysis, the results did not change from the analysis including all the patients.

Supplemental Fig. 3 Tyrosine phosphorylation of IRS2 in olfactory neuronal cells after excluding one healthy control outlier from the analysis (see Figure 2 including all the subjects)

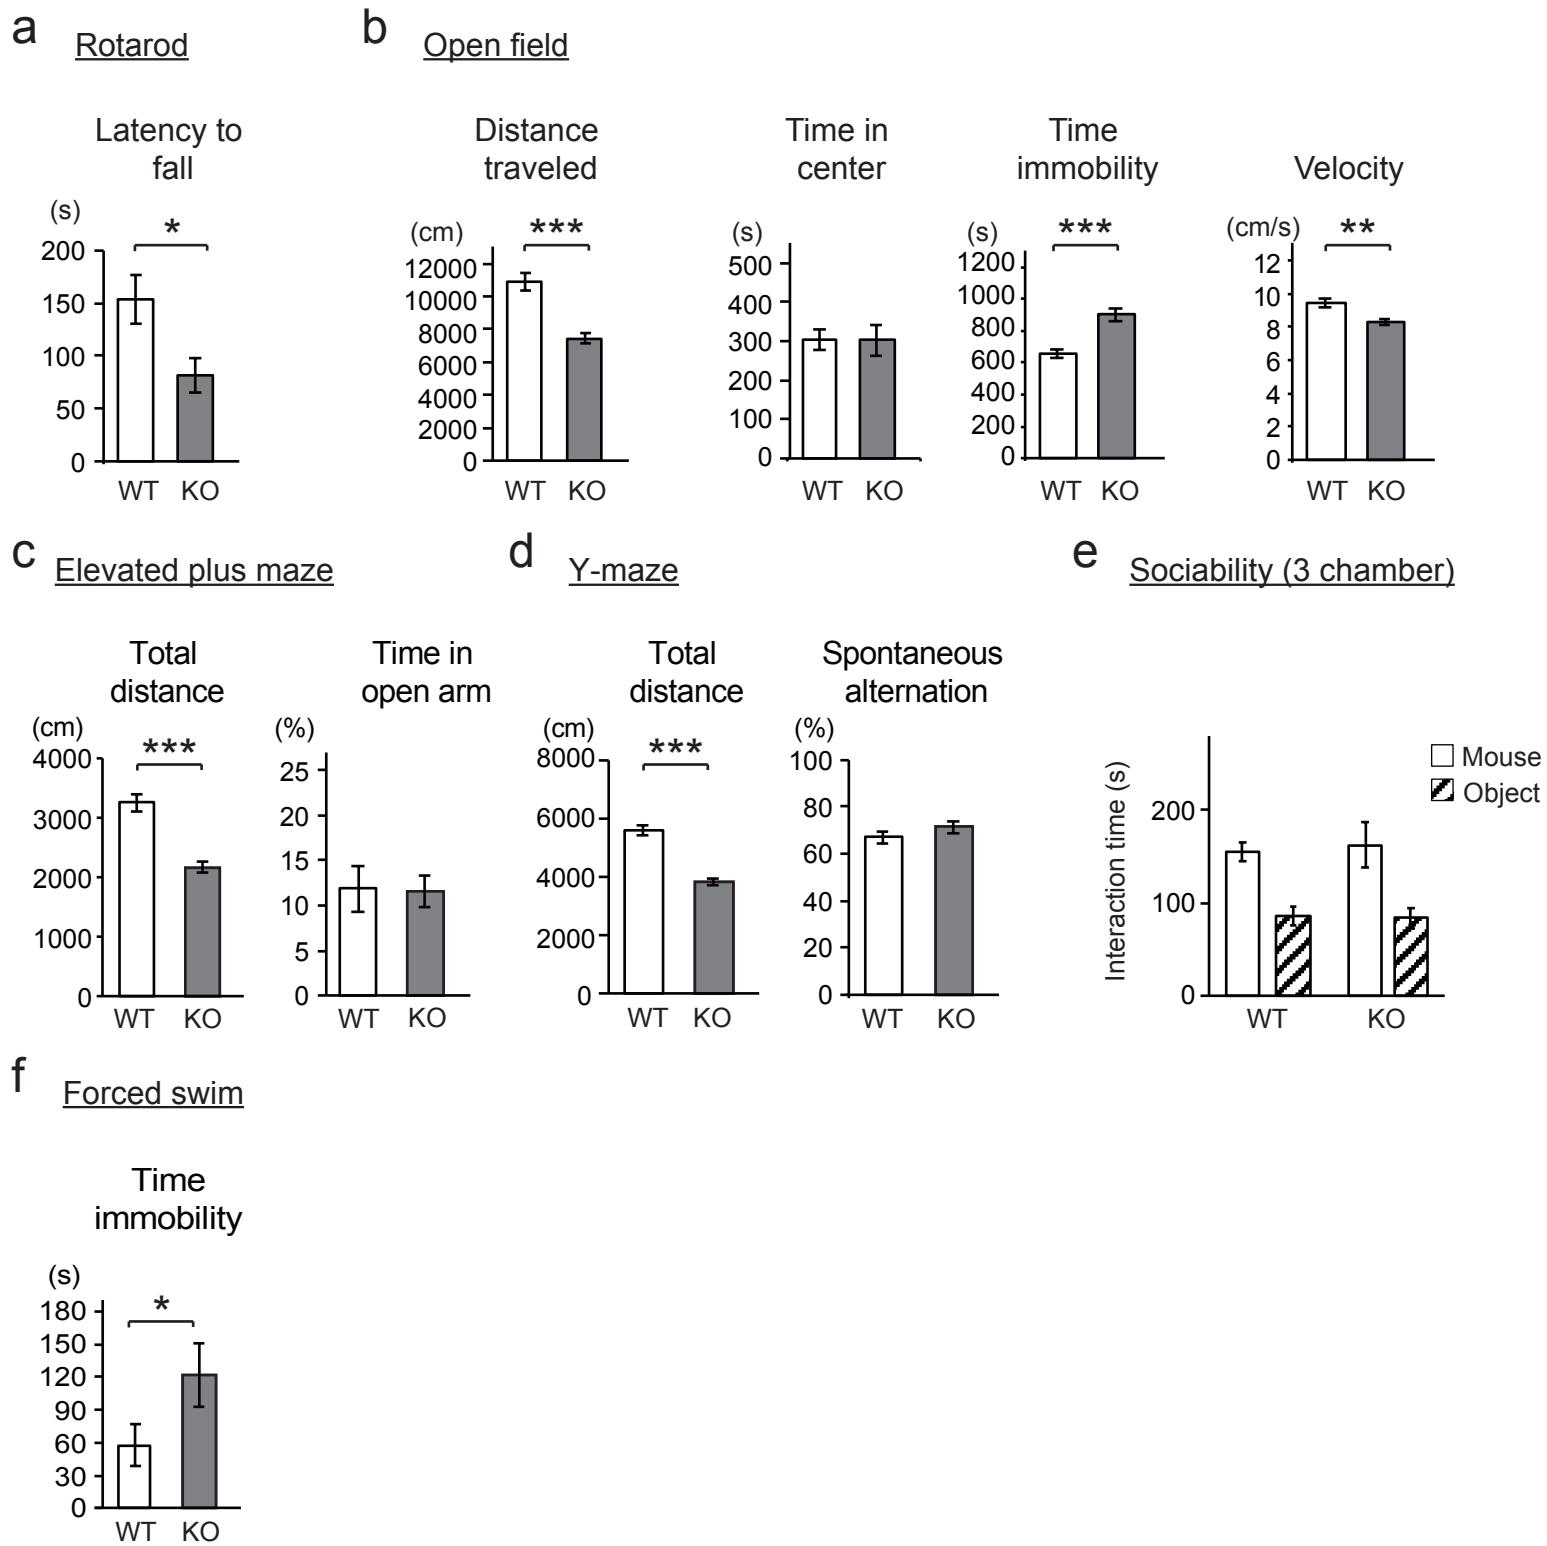

Olfactory neuronal cells derived from patients with SZ or BP as well as those from healthy controls (HC) were stimulated with insulin and characterized for the level of tyrosine phosphorylation of IRS2. Data are shown as mean \pm SEM. * $P=0.0269$ (one-way ANOVA, followed by Bonferroni's multiple comparison test). Though one possible outlier (higher than the average by more than two-fold standard deviation) was excluded in this analysis, the results did not change from the analysis including all the patients.

Supplemental Fig. 4 IRS1 phosphorylation at serine-312 in olfactory neuronal cells derived from SZ and BP patients

The level of IRS1 phosphorylation at serine-312 (pIRS1) was measured in olfactory neuronal cells derived from patients with SZ or BP and healthy controls (HC) at baseline (without insulin stimulation). Data are shown as mean \pm SEM. *P<0.05. Red, 1 SZ patient who was pre-diabetic and 2 BP patients who had diabetes at the time of the nasal biopsy. Green, 2 outliers (1 SZ and 1 BP) that are different from the average at more than two-fold standard deviation. The inclusion and exclusion of these subjects (diabetic/pre-diabetic patients or outliers) did not change the scientific conclusions.

Supplemental Figure 5

Supplemental Fig. 5 Behavioral assays of Irs2 KO mice

Male Irs2 KO mice (N=9) and WT littermates (N=12) at 7 weeks of age were subjected to rotarod (a), open field (b), elevated plus maze (c), Y-maze (d), three-chamber social interaction (e), and forced swim test (f). Data are shown as mean \pm SEM. Statistical analysis was performed as described in the Materials and Methods. * P<0.05, ** P<0.01, *** P<0.001.

Supplemental Table 1 | Psychiatric diagnostic classifications used in this study

Schizophrenia (SZ)

ICD 8 codes 295.xx (except 295.79)
ICD10 codes F20

Bipolar disorder (BP)

ICD 8 codes 296.19
 296.39
ICD10 codes F30
 F31

ICD 8, International Classification of Disease, eighth edition; ICD 10, International Classification of Disease, tenth edition

Supplemental Table 2 | Criteria for diabetes used in this study (at least one of the following)

-
- 1) A diagnosis of diabetes (ICD-10 codes: E11-14, H36.0, and O24 excluding O24.4) registered in the Danish National Registry of Patients.
 - 2) Chiropody for diabetic patients recorded in the National Health Insurance Service Registry.
 - 3) Five blood glucose measurements within one year or two measurements per year in five consecutive years recorded in the National Health Insurance Service Registry.
 - 4) A second purchase of oral glucose-lowering drugs recorded in the Register of Medical Product Statistics within six months (except for women aged 20-39 years prescribed metformin alone).
 - 5) A second purchase of insulin recorded in the Register of Medical Product Statistics.
-

ICD 10, International Classification of Disease, tenth edition

Supplemental Table 3a | Incidence of diabetes in each population

Population	Person-years under risk	Incidence of diabetes	Rate per 1000 person-years
SZ			
Female	90232	1016	11.26
Male	127169	1233	9.70
Without SZ			
Female	31683091	120193	3.79
Male	31096993	131553	4.23
BP
