LighTen-24h-ABPM Substudy Diary

Patient ID:

First Name:

Last Name:

- A. Please press the arrow sign button and tick against the relevant picture during the following events in order of occurrence (*Chonde dinani batani la kalozera panthawi yomwe izi zikuchitika ndipo muchonge mmunsimu mwa mndandanda mmene zachitikira*):

Shortness of breath Kubanika	Dizziness Chizungulire	Heartache Kumva mtima kupweteka	Physical activity Masewera/majowa/jowa	Meal Kudya

1.					
2.					
3.					
4.					
5.					
6.					
7.					

- B. Please press the day/night sign button once when going to sleep at night and once when waking up in the morning (*Chonde dinani batani lowonetsa usiku ndi usana kamodzi pomwe mukukagona ndi kamodzi mukadzuka mmawa*)

- C. Please press the start key sign button after taking medication. Triggers an additional measurement. (*chonde dinani batani ili mukatha kumwa mankhwala. Mukatero makina ayambano kuyesa*)

## Important instructions for the patient

■ The beep signals a measurement. Keep still during the measurement, until the process is complete. Let your arm hang loosely or, when sitting, let your lower arm rest on the table or on a support. Sit with feet flat on the floor, legs not crossed, back supported. Avoid moving your hand during the measurement. Relax and do not talk during the measurement.

- The ON/OFF key  permits the device to be switched on and off if a measurement is not required at the set time. To switch off, press the key for longer than 2 seconds.
- A measurement can be interrupted at any time by pressing any of the keys. This deflates the cuff.

### Warnings:

- The cuff may only be worn on the upper arm and in every case you should ensure that neither the shoulder strap nor the air tube can ever become wrapped around your neck. The air tube should therefore always be worn under the outer clothing (even at night).
- Take care to ensure that the tube of the cuff cannot be kinked or compressed, particularly while sleeping.
- If the measurement causes you pain, switch off the device, take off the cuff and inform your doctor.
- The blood pressure monitor must not come into contact with liquids. Do not wear the equipment in the shower! If, for example, water has entered the device, it may no longer be used. Switch off the device and take out the batteries.
- Serious malfunctions are indicated by a continuous beep. If a continuous beep sounds, switch off the device, take off the cuff and inform your doctor.
- The cuff connection (air connector) must always engage with an audible click. Otherwise there will be a leaky connection between the Mobil-O-Graph 24h PWA® and the tube that will produce incorrect measurements.

In case of urgent questions you can contact one of the following numbers:
