Supplementary Figure S1. Heat map showing gene expression levels of the eight samples [4 α-SMA negative (“A” samples) and 4 α-SMA positive (“B” samples) SSc fibroblasts] isolated from the same culture dish employing LCM. Gene expression levels are depicted as color variation from red (high expression) to blue (low expression). The gene expression microarrays were performed employing Affymetrix gene chips (human gene 1.0 ST arrays), and the analysis were performed utilizing the Agilent Gene Spring Software 11.5 also from Affymetrix.

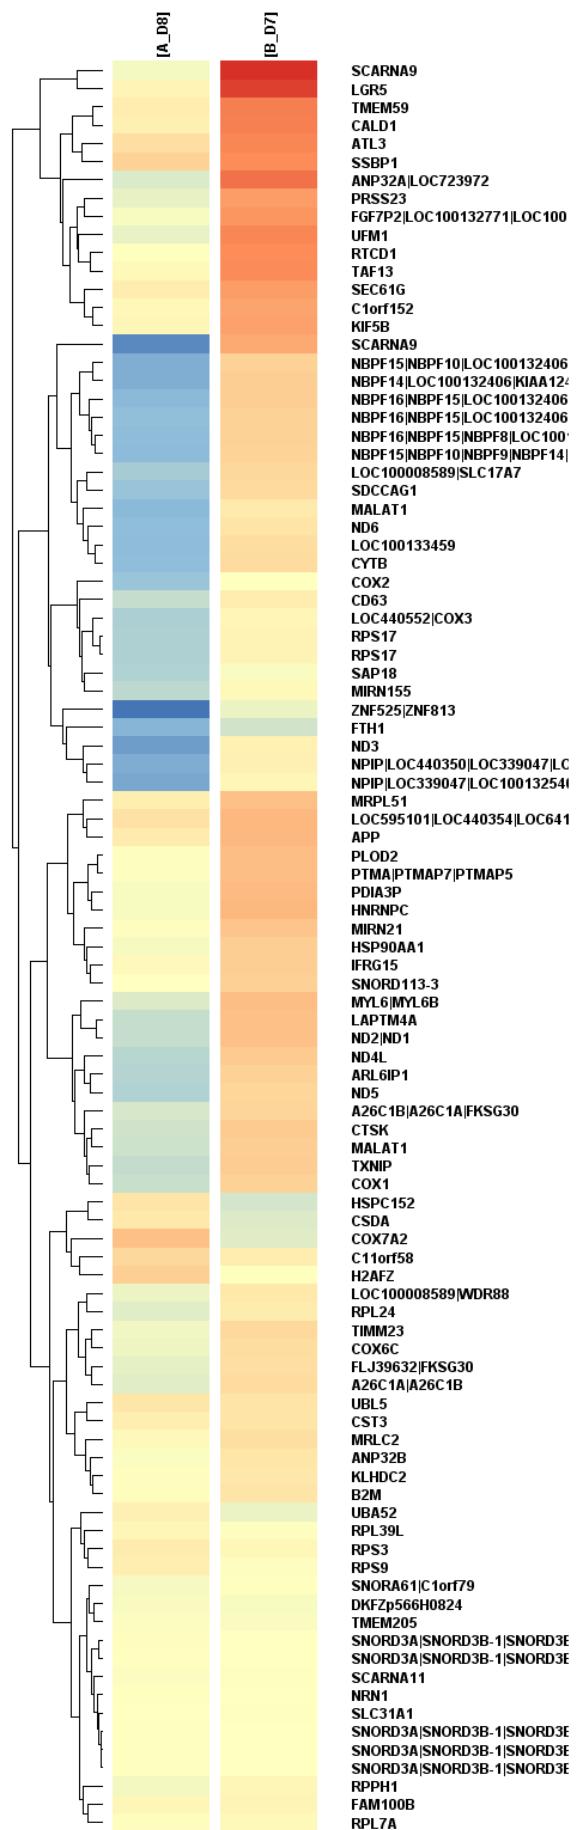

Supplementary Figure S2. Four heat maps showing gene expression level as separate images of each individual pair (α -SMA-negative “A” vs. α -SMA-positive “B” samples). The gene expression microarrays were performed employing Affymetrix gene chips (human gene 1.0 ST arrays), and the analysis were performed utilizing the Agilent Gene Spring Software 11.5 also from Affymetrix.

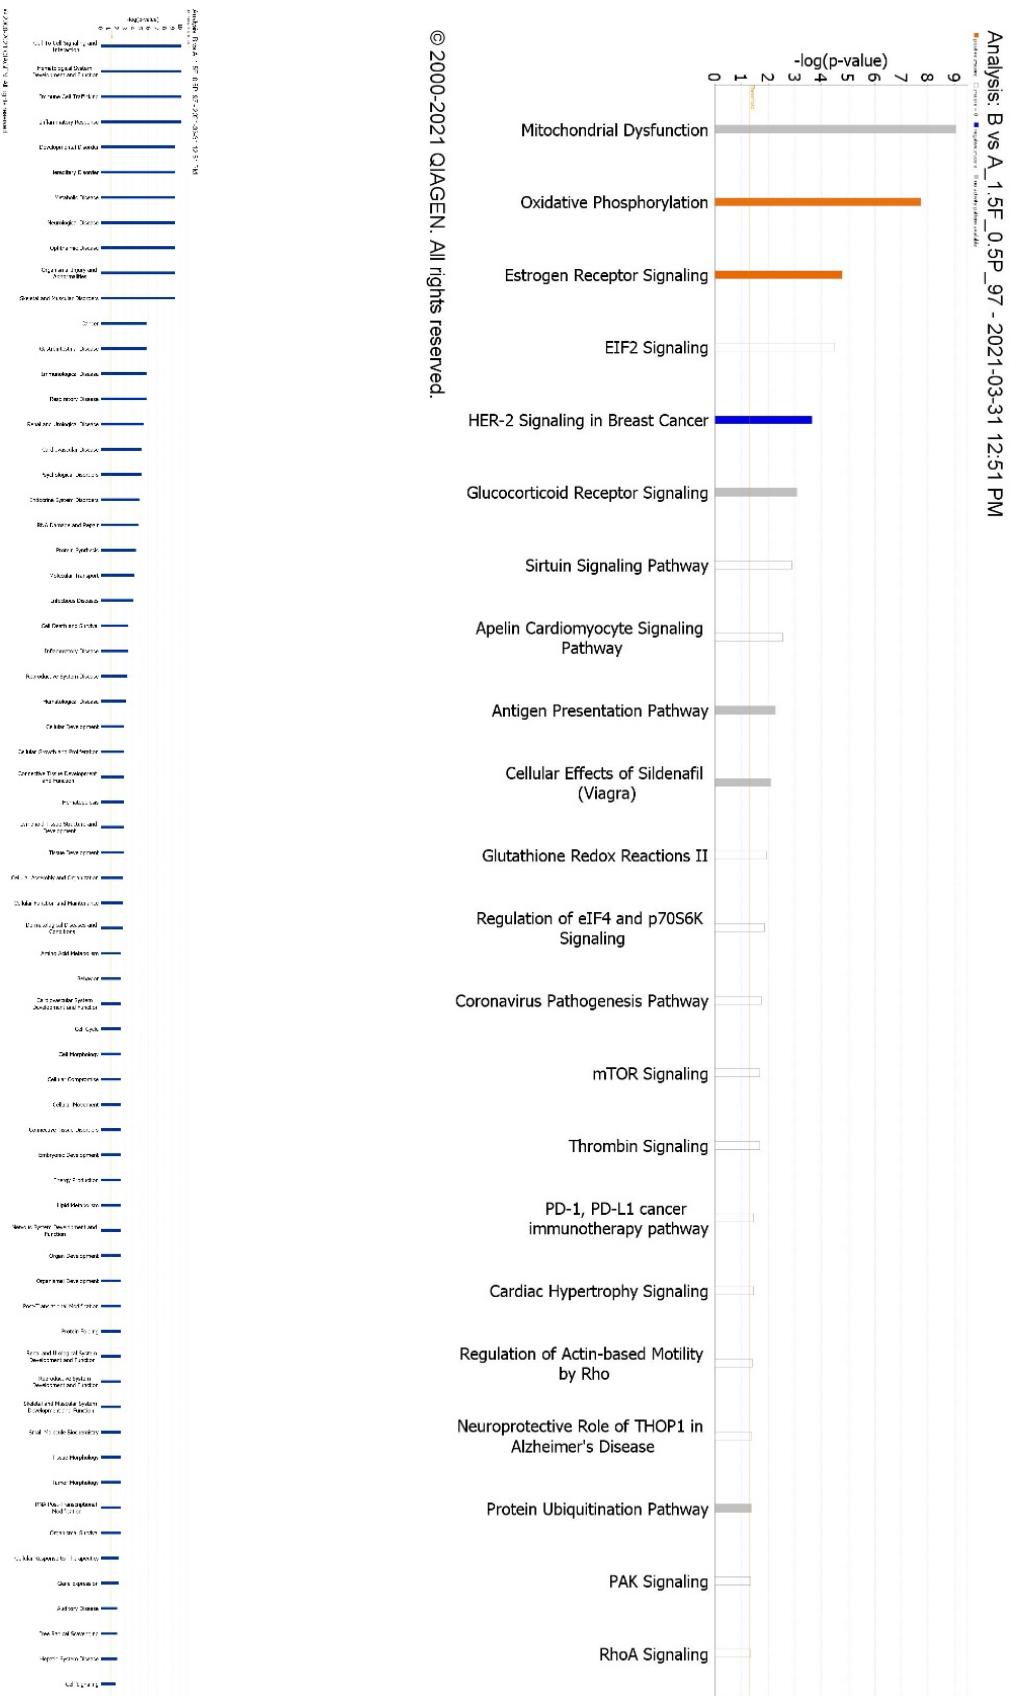

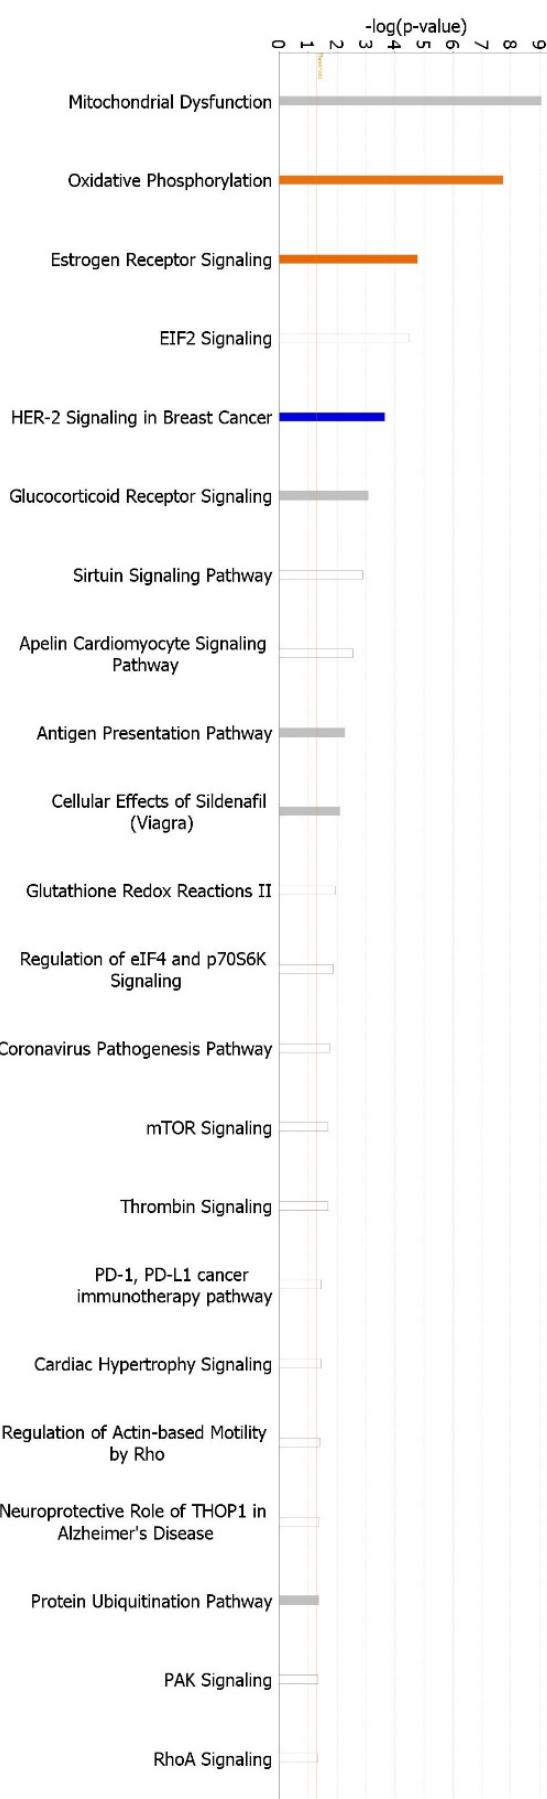

Supplementary Figure S3. Functional category of the differentially expressed genes of α-SMA positive ("B" samples) and α-SMA negative ("A" samples) SSc fibroblasts.

Supplementary Table S1. Complete list of the genes and pathways identified by Ingenuity CanPath.
