

Supplemental Figure S3 HMGB1 secretion is induced by LPS and heat-killed *C. albicans*, but MON-DNJ does not affect levels. Two donors (a, b) were treated as previously described with infectious stimuli +/- 25 μ M MON-DNJ for 6, 12, and 24 hour time points. Supernatants were collected for HMGB1 ELISA as described in the Methods. Each sample was assayed in technical triplicate ($n=3$). Repeated Measures Two way ANOVA with Holm-Šídák correction for multiple comparisons was performed to identify statistically significant differences. All error bars represent standard deviation. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$
