Example of a table as presented in individual studies **that allow for** calculation of the (dis)concordance.

Preferred	Perceived			
Preferred	Active	Shared	Passive	Total
Active	**A**	E	I	M
Shared	B	**F**	J	N
Passive	C	G	**K**	O
Total	D	H	L	P

For example the percentage disconcordance for a shared decision role is calculated by: (B + J) / N * 100%. The overall disconcordance for the 3 levels together is calculated by: P – (A + F + K) / P * 100%.

Example of a table as presented in individual studies **that does not allow** for calculation of the (dis)concordance.

Preferred	N	%
Active
