mm: mismatch; GvH: mm in graft versus host direction; HvG: mm in host versus graft direction; R: recipient; D: donor.

§: including 2 donor/recipient pairs with expression level not available and 76 pairs with a mismatch in the HvG direction only.

*: 12/12 matched with the presence of an HLA-DRB3/4 mismatch.

Supplementary table 1. Distribution of HLA mismatches according to the different biological models

*: the number of patients/events for the regressions with expression is N=604/242, 604/84, 579/191, 564/52, 539/205 and 558/212 for OS, TRM, aGVHD \geq 2, aGVHD \geq 3, cGVHD and relprog, respectively. **: patients with non-malignant disorder are excluded from analyses on relapse.

events: number of events in the risk category for the specified outcome, n: number of patients in the risk category for the specified outcome.

0.05 > p \geq 0.01 are shown in bold and italic, p<0.01 are shown in bold, italic and underlined. GvH: mm in graft versus host direction; HvG: mm in host versus graft direction; R: recipient; D: donor.

Significant co-variables retained for OS: type of diagnosis, status of disease, co-morbid conditions and graft manipulation.

Significant co-variables retained for TRM: type of diagnosis, status of disease, co-morbid conditions, graft manipulation and transplant center.

Significant co-variables retained for aGVHD: HLA-DRB3/4/5 matching, graft manipulation and transplant center.

Significant co-variables retained for cGVHD: age of patient, status of disease, graft manipulation and transplant center.

Significant co-variables retained for relprog: EBMT risk score, graft manipulation and transplant center.

*: the number of patients/events for the regressions with expression is N=604/242, 604/84, 579/191, 564/52, 539/205 and 558/212 for OS, TRM, aGVHD \geq 2, aGVHD \geq 3, cGVHD and relprog, respectively. **: patients with non-malignant disorder are excluded from analyses on relapse.

events: number of events in the risk category for the specified outcome, n: number of patients in the risk category for the specified outcome.

0.05 > p \geq 0.01 are shown in bold and italic, p<0.01 are shown in bold, italic and underlined. R: recipient; D: donor.

§: not interpretable (NI) because of the very small number of patients in this group.

Significant co-variables retained for OS: type of diagnosis, status of disease, co-morbid conditions and graft manipulation.

Significant co-variables retained for TRM: type of diagnosis, status of disease, co-morbid conditions, graft manipulation and transplant center.

Significant co-variables retained for aGVHD: HLA-DRB3/4/5 matching, graft manipulation and transplant center.

Significant co-variables retained for cGVHD: age of patient, status of disease, graft manipulation and transplant center.

Significant co-variables retained for relprog: EBMT risk score, graft manipulation and transplant center.

Supplementary table 3. Multivariable analyses for several HSCT outcomes and association with combined biological models

Supplementary Figure 1

Distribution of the number of PIRCHE I and II according to classical matching, TCE and expression. The number of donor/recipient pairs included in each group is indicated above the boxplots (more details in Table 2). Each dot indicates the number of potential binders predicted by the PIRCHE algorithm in a given donor/recipient pair. The color of the dot represents the matching status between donor and recipient at HLA-DPB1 (i.e. 0, 1 or 2 mismatches) and HLA-DRB3/4/5 (i.e. absence or presence of a mismatch). The models TCE3.1 and TCE4.2 were chosen among the four alternative TCE models investigated in this study to illustrate the distribution of potential binders in permissive and non-permissive (total, HvG or GvH) mismatched groups. Similar distributions were observed for TCE3.2 and TCE4.1 (data not shown). HvG: incompatibility in the host versus graft direction, GvH: incompatibility in the graft versus host direction, TCE: T-Cell Epitopes, PIRCHE: Predicted Indirectly ReCognizable HLA Epitopes, mm: mismatch.

Supplementary Figure 2

Selected Kaplan Meier (KM) plots for single HLA-DPB1 models and acute GVHD ≥ 2 .

Supplementary Figure 3

Selected Kaplan Meier (KM) plots for single HLA-DPB1 models and relapse/progression.

Supplementary Figure 4
