Reporting Summary

Nature Research wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Research policies, see our <u>Editorial Policies</u> and the <u>Editorial Policy Checklist</u>.

\sim .			0.00	
St	a:	tı٥	:†ı	C

For	all st	atistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.
n/a	Cor	nfirmed
	X	The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement
	x	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
	×	The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.
X		A description of all covariates tested
	x	A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
	×	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
x		For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i>) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>
	×	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
	X	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
	×	Estimates of effect sizes (e.g. Cohen's d, Pearson's r), indicating how they were calculated

Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.

Software and code

Policy information about <u>availability of computer code</u>

Data collection

We used publically available CITE-seq data, single-cell RNA-seq data, TCGA data, PBMC data, and simulation data generated. We provided the link to the CITE-seq data (10x website). TCGA data was obtained using the TCGAbiolinks R package. We provived the accession number for PBMC data. For simulation data, we provide a script to reproduce them.

Versions of R packages used:

fitdistrplus 1.1-1 Seurat 3.1.4 TCGAbiolinks 2.12.6 curatedTCGAData 1.6.0 MultiAssayExsperiment 1.10.4 TCGAutils 1.4.0 immunedeconv (for EPIC) 2.0.3

Data analysis

We used several R packages and python scripts to produce the results. The source code is deposited on the github repository. https://github.com/tgac-vumc/BLADE

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Research guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A list of figures that have associated raw data
- A description of any restrictions on data availability

We used public CITE-seq data obtained from 10x Genomics in Figures 1, 2, 5-6. The link to the data is: https://support.10xgenomics.com/single-cell-geneexpression/datasets/3.0.2/5k_pbmc_protein_v3 and https://support.10xgenomics.com/single- cell-gene-expression/datasets/3.0.0/pbmc_10k_protein_v3. The TCGA data is used in Figure 2, and the data is publically available and retrievable using the TCGA-biolinks. The single-cell RNA-seq data is obtained from the Genome Sequence Archive (CRP000653). The PBMC data is obtained from GEO with the accession number GSE107572.

Life sciences study design

All studies must disclose on these points even when the disclosure is negative.

Sample size

We used 700 simulation data sets constructed using all possible combinations of:

The number of cell types (2-20).

The number of samples (5-100).

The number of genes (100-1000).

Variability levels (0.1-1.5).

The common situations inspire the ranges of the parameters, and the simulation data set is independently sampled. The PBMC in-silico mixture contains 20 samples generated by random sampling of 100 cells among the 9,493 cells. We chose the number of cells (n=100) to match the variability of simulated bulk gene expression data with the real variability. We used all the available data for PBMC (n=9 samples) and PDAC (n=35 samples) cohorts.

Data exclusions

No data was excluded

Replication

We evaluated the performance of BLADE, CIBERSORTX, MuSiC, and NNLS using diverse setting of number of genes, samples and cell types (700 data sets generated independently) using simulation data. The trend we observed in the outcome should be reproducible. For the PDAC and PBMC bulk data, no simulation is involved and thus the outcome is the most realistic / reproducible.

Randomization

The simulation data (Figure 4) was generated using independent and identically distributed (i.i.d) random variables. 100 PBMC cells are randomly sampled from 9,493 cells to produce realistic in-silico mixture data (Figure 5). For PDAC data, we pre-selected six auxiliary samples with the largest number of cells (out of 35 samples) to build reliable prior knowledge.

Blinding

All the random sampling in the study is done pure-randomly. The evaluation of Log-normal and Negative Binomial distribution on the deconvolution task was done separately (Figure 2) from the authors who developed BLADE. Also, the authors performed immune cell classification is separate from the authors who developed and evaluated the BLADE.

Behavioural & social sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description

Briefly describe the study type including whether data are quantitative, qualitative, or mixed-methods (e.g., qualitative cross-sectional, quantitative experimental, mixed-methods case study).

Research sample

State the research sample (e.g. Harvard university undergraduates, villagers in rural India) and provide relevant demographic information (e.g. age, sex) and indicate whether the sample is representative. Provide a rationale for the study sample chosen. For studies involving existing datasets, please describe the dataset and source.

Sampling strategy

Describe the sampling procedure (e.g. random, snowball, stratified, convenience). Describe the statistical methods that were used to predetermine sample size OR if no sample-size calculation was performed, describe how sample sizes were chosen and provide a rationale for why these sample sizes are sufficient. For qualitative data, please indicate whether data saturation was considered, and what criteria were used to decide that no further sampling was needed.

Data collection

Provide details about the data collection procedure, including the instruments or devices used to record the data (e.g. pen and paper, computer, eye tracker, video or audio equipment) whether anyone was present besides the participant(s) and the researcher, and

	whether the researcher was blind to experimental condition and/or the study hypothesis during data collection.
Timing	Indicate the start and stop dates of data collection. If there is a gap between collection periods, state the dates for each sample cohort.
Data exclusions	If no data were excluded from the analyses, state so OR if data were excluded, provide the exact number of exclusions and the rationale behind them, indicating whether exclusion criteria were pre-established.
Non-participation	State how many participants dropped out/declined participation and the reason(s) given OR provide response rate OR state that no participants dropped out/declined participation.
Randomization	If participants were not allocated into experimental groups, state so OR describe how participants were allocated to groups, and if allocation was not random, describe how covariates were controlled.

Ecological, evolutionary & environmental sciences study design

<u> </u>	<u> </u>
All studies must disclose or	n these points even when the disclosure is negative.
Study description	Briefly describe the study. For quantitative data include treatment factors and interactions, design structure (e.g. factorial, nested, hierarchical), nature and number of experimental units and replicates.
Research sample	Describe the research sample (e.g. a group of tagged Passer domesticus, all Stenocereus thurberi within Organ Pipe Cactus National Monument), and provide a rationale for the sample choice. When relevant, describe the organism taxa, source, sex, age range and any manipulations. State what population the sample is meant to represent when applicable. For studies involving existing datasets, describe the data and its source.
Sampling strategy	Note the sampling procedure. Describe the statistical methods that were used to predetermine sample size OR if no sample-size calculation was performed, describe how sample sizes were chosen and provide a rationale for why these sample sizes are sufficient.
Data collection	Describe the data collection procedure, including who recorded the data and how.
Timing and spatial scale	Indicate the start and stop dates of data collection, noting the frequency and periodicity of sampling and providing a rationale for these choices. If there is a gap between collection periods, state the dates for each sample cohort. Specify the spatial scale from which the data are taken
Data exclusions	If no data were excluded from the analyses, state so OR if data were excluded, describe the exclusions and the rationale behind them, indicating whether exclusion criteria were pre-established.
Reproducibility	Describe the measures taken to verify the reproducibility of experimental findings. For each experiment, note whether any attempts to repeat the experiment failed OR state that all attempts to repeat the experiment were successful.
Randomization	Describe how samples/organisms/participants were allocated into groups. If allocation was not random, describe how covariates were controlled. If this is not relevant to your study, explain why.
Blinding	Describe the extent of blinding used during data acquisition and analysis. If blinding was not possible, describe why OR explain why blinding was not relevant to your study.
Did the study involve fiel	d work? Yes No
Field work, collec	tion and transport

Field conditions	Describe the study conditions for field work, providing relevant parameters (e.g. temperature, rainfall).
Location	State the location of the sampling or experiment, providing relevant parameters (e.g. latitude and longitude, elevation, water depth).
Access & import/export	Describe the efforts you have made to access habitats and to collect and import/export your samples in a responsible manner and in compliance with local, national and international laws, noting any permits that were obtained (give the name of the issuing authority, the date of issue, and any identifying information).
Disturbance	Describe any disturbance caused by the study and how it was minimized.

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experime	ntal systems Methods						
n/a Involved in the study	Involved in the study n/a Involved in the study

ı							
Antibodies							
Antibodies used	Describe all antibodies used in the study; as applicable, provide supplier name, catalog number, clone name, and lot number.						
Validation	Describe the validation of each primary antibody for the species and application, noting any validation statements on the manufacturer's website, relevant citations, antibody profiles in online databases, or data provided in the manuscript.						
Eukaryotic coll lin							
Eukaryotic cell lin							
Policy information about <u>ce</u>							
Cell line source(s)	State the source of each cell line used.						
Authentication	Describe the authentication procedures for each cell line used OR declare that none of the cell lines used were authenticated.						
Mycoplasma contamination Confirm that all cell lines tested negative for mycoplasma contamination OR describe the results of the testing for mycoplasma contamination. Confirm that all cell lines tested negative for mycoplasma contamination OR describe the results of the testing for mycoplasma contamination.							
Commonly misidentified (See <u>ICLAC</u> register)	d lines [Name any commonly misidentified cell lines used in the study and provide a rationale for their use.]						
Palaeontology an	d Archaeology						
Specimen provenance	Provide provenance information for specimens and describe permits that were obtained for the work (including the name of the issuing authority, the date of issue, and any identifying information).						
Specimen deposition	Indicate where the specimens have been deposited to permit free access by other researchers.						
Dating methods	If new dates are provided, describe how they were obtained (e.g. collection, storage, sample pretreatment and measurement), where they were obtained (i.e. lab name), the calibration program and the protocol for quality assurance OR state that no new dates are provided.						
Tick this box to confir	n that the raw and calibrated dates are available in the paper or in Supplementary Information.						
Ethics oversight	Identify the organization(s) that approved or provided guidance on the study protocol, OR state that no ethical approval or guidance was required and explain why not.						
Note that full information on t	ne approval of the study protocol must also be provided in the manuscript.						
Animals and othe	r organisms						
Policy information about <u>st</u>	udies involving animals; ARRIVE guidelines recommended for reporting animal research						
Laboratory animals	For laboratory animals, report species, strain, sex and age OR state that the study did not involve laboratory animals.						
Wild animals	Provide details on animals observed in or captured in the field; report species, sex and age where possible. Describe how animals were caught and transported and what happened to captive animals after the study (if killed, explain why and describe method; if released, say where and when) OR state that the study did not involve wild animals.						
Field-collected samples	For laboratory work with field-collected samples, describe all relevant parameters such as housing, maintenance, temperature, photoperiod and end-of-experiment protocol OR state that the study did not involve samples collected from the field.						

Identify the organization(s) that approved or provided guidance on the study protocol, OR state that no ethical approval or guidance was required and explain why not.

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Ethics oversight

Llumann	racaarah	nartici	nanta
Human	research	partici	pants

Hullian research	participarits
Policy information about st	tudies involving human research participants
Population characteristic	Describe the covariate-relevant population characteristics of the human research participants (e.g. age, gender, genotypic information, past and current diagnosis and treatment categories). If you filled out the behavioural & social sciences study design questions and have nothing to add here, write "See above."
Recruitment	Describe how participants were recruited. Outline any potential self-selection bias or other biases that may be present and how these are likely to impact results.
Ethics oversight	Identify the organization(s) that approved the study protocol.
Note that full information on t	the approval of the study protocol must also be provided in the manuscript.
Clinical data	
Policy information about <u>c</u> l	linical studies y with the ICMJEguidelines for publication of clinical research and a completed CONSORT checklist must be included with all submissions.
Clinical trial registration	Provide the trial registration number from ClinicalTrials.gov or an equivalent agency.
Study protocol	Note where the full trial protocol can be accessed OR if not available, explain why.
Data collection	Describe the settings and locales of data collection, noting the time periods of recruitment and data collection.
Outcomes	Describe how you pre-defined primary and secondary outcome measures and how you assessed these measures.

Data deposition	
Cantinua that has been	

Confirm that you have deposited or provided access to graph files (e.g. BED files) for the called peaks.

	For "Initial submission" or "Revised version" documents, provide reviewer access links. For your "Final submission" document, provide a link to the deposited data.
Files in database submission	Provide a list of all files available in the database submission.

Genome browser session (e.g. <u>UCSC</u>)

Provide a link to an anonymized genome browser session for "Initial submission" and "Revised version" documents only, to enable peer review. Write "no longer applicable" for "Final submission" documents.

Methodology

Replicates	Describe the experimental replicates, specifying number, type and replicate agreement.
Sequencing depth	Describe the sequencing depth for each experiment, providing the total number of reads, uniquely mapped reads, length of reads and whether they were paired- or single-end.
Antibodies	Describe the antibodies used for the ChIP-seq experiments; as applicable, provide supplier name, catalog number, clone name, and lot number.
Peak calling parameters	Specify the command line program and parameters used for read mapping and peak calling, including the ChIP, control and index files used.
Data quality	Describe the methods used to ensure data quality in full detail, including how many peaks are at FDR 5% and above 5-fold enrichment.
Software	Describe the software used to collect and analyze the ChIP-seq data. For custom code that has been deposited into a community repository, provide accession details.

Flow Cytometry

Plots

Confirm that:	
The axis labels state the ma	arker and fluorochrome used (e.g. CD4-FITC).
The axis scales are clearly v	visible. Include numbers along axes only for bottom left plot of group (a 'group' is an analysis of identical markers).
All plots are contour plots	with outliers or pseudocolor plots.
A numerical value for num	ber of cells or percentage (with statistics) is provided.
Methodology	
Sample preparation	Describe the sample preparation, detailing the biological source of the cells and any tissue processing steps used.
Instrument	Identify the instrument used for data collection, specifying make and model number.
Software	Describe the software used to collect and analyze the flow cytometry data. For custom code that has been deposited into a community repository, provide accession details.
Cell population abundance	Describe the abundance of the relevant cell populations within post-sort fractions, providing details on the purity of the samples and how it was determined.
Gating strategy	Describe the gating strategy used for all relevant experiments, specifying the preliminary FSC/SSC gates of the starting cell population, indicating where boundaries between "positive" and "negative" staining cell populations are defined.
Tick this box to confirm that	at a figure exemplifying the gating strategy is provided in the Supplementary Information.

Magnetic resonance imaging

Experimental design

Design type

Indicate task or resting state; event-related or block design.

Specifications

Specifications

Specify the number of blocks, trials or experimental units per session and/or subject, and specify the length of each trial

or block (if trials are blocked) and interval between trials.

Behavioral performance measures

State number and/or type of variables recorded (e.g. correct button press, response time) and what statistics were used to establish that the subjects were performing the task as expected (e.g. mean, range, and/or standard deviation across subjects).

Acquisition	
Imaging type(s)	Specify: functional, structural, diffusion, perfusion.
Field strength	Specify in Tesla
Sequence & imaging parameters	Specify the pulse sequence type (gradient echo, spin echo, etc.), imaging type (EPI, spiral, etc.), field of view, matrix size, slice thickness, orientation and TE/TR/flip angle.
Area of acquisition	State whether a whole brain scan was used OR define the area of acquisition, describing how the region was determined
Diffusion MRI Used	Not used
Preprocessing	
	de detail on software version and revision number and on specific parameters (model/functions, brain extraction, entation, smoothing kernel size, etc.).
	a were normalized/standardized, describe the approach(es): specify linear or non-linear and define image types used for formation OR indicate that data were not normalized and explain rationale for lack of normalization.
	ribe the template used for normalization/transformation, specifying subject space or group standardized space (e.g. nal Talairach, MNI305, ICBM152) OR indicate that the data were not normalized.
	ribe your procedure(s) for artifact and structured noise removal, specifying motion parameters, tissue signals and ological signals (heart rate, respiration).
Volume censoring	e your software and/or method and criteria for volume censoring, and state the extent of such censoring.
Statistical modeling & inference	
	fy type (mass univariate, multivariate, RSA, predictive, etc.) and describe essential details of the model at the first and additional section of the model at the first and additional section.
	e precise effect in terms of the task or stimulus conditions instead of psychological concepts and indicate whether ANOV ctorial designs were used.
Specify type of analysis: Who	prain ROI-based Both
Statistic type for inference (See Eklund et al. 2016)	fy voxel-wise or cluster-wise and report all relevant parameters for cluster-wise methods.
Correction	ibe the type of correction and how it is obtained for multiple comparisons (e.g. FWE, FDR, permutation or Monte Carlo).
Models & analysis n/a Involved in the study	
Functional and/or effective connec	ty Report the measures of dependence used and the model details (e.g. Pearson correlation, partial correlation, mutual information).
Graph analysis	Report the dependent variable and connectivity measure, specifying weighted graph or binarized graph, subject- or group-level, and the global and/or node summaries used (e.g. clustering coefficient, efficiency, etc.).
Multivariate modeling and predicti	Specify independent variables, features extraction and dimension reduction, model, training and evaluation metrics.
