^a Fewer than 8% of any covariate was missing. Missing data were imputed using the fully conditional specification method and 20 imputation sets. Missing data included: BMI (n= 2,282), outpatient blood pressure (n= 1,594), pre-admission estimated glomerular filtration rate (n=1,560), inpatient glucose (n=2,012), discharge hemoglobin (n=1,705), discharge potassium (n=961), discharge sodium (n=883), discharge blood urea nitrogen (n=1,337), discharge carbon dioxide (n=1,201), discharge platelets (n=1,235), discharge estimated glomerular filtration rate (n=1,476).

^b All medications classified using VA drug class coding. Combination medications were split into component parts. Topical, inhaled, otic, and optic medications were excluded.

^c Laboratory data collected from day of index hospitalization discharge or during index hospitalization up to 2 days prior to day of discharge

^d Comorbidities include both secondary discharge diagnoses from index hospitalization and preadmission diagnoses from the year preceding index hospitalization.

eTable 4. Difference in Differences Analysis of Hemoglobin A_{1c} Values One Year Following Discharged With or Without Diabetes Medication Intensifications

HbA_{1c}, Mean (95% CI), %^a	Received Discharge Intensifications (N=2,157)	No Discharge Intensifications (N=2,057)
Baseline	7.91 (7.84 to 7.98)	7.91 (7.84 to 7.97)
Post-baseline ^b	7.72 (7.65 to 7.79)	7.70 (7.68 to 7.77)
Pre-post change	-0.19 (-0.29 to -0.10)	-0.21 (-0.31 to -0.11)
Difference-in-differences estimate ^c	0.02 (-0.12 to 0.16)	

Abbreviations: SD, standard deviation, HbA_{1c}, hemoglobin A_{1c}

^a The results are from the 4,215 patients in the propensity-matched cohort who met the inclusion criteria for the HbA_{1c} analysis (outpatient HbA_{1c} measured between 6 months and 18 months following index hospitalization discharge). Mean (SD) number of days between baseline and postbaseline measure 278 (80) days for intensified group and 282 (82) days for not intensified group.

^b The post-discharge HbA_{1c} was assessed prior to censoring as the HbA_{1c} recorded at the closest date to 1 year following index hospitalization discharge, within the range for 6 to 18 months following discharge.

^c Calculated as the pre-post change in HbA_{1c} for the intensified regimen group minus the pre-post change in HbA_{1c} for the not intensified group.

^a The results are from patients in each propensity-matched cohort who met the inclusion criteria for the HbA_{1c} analysis (outpatient HbA_{1c} measured between 6 months and 18 months following index hospitalization discharge). Mean (SD) number of days between baseline and postbaseline measures for controlled baseline HbA_{1c} subgroup: 281 (80) days for intensified group and 283 (84) days for not intensified group. Mean (SD) number of days between baseline and postbaseline measures for elevated baseline HbA_{1c} subgroup: 274 (78) days for intensified group and 276 (83) days for not intensified group.

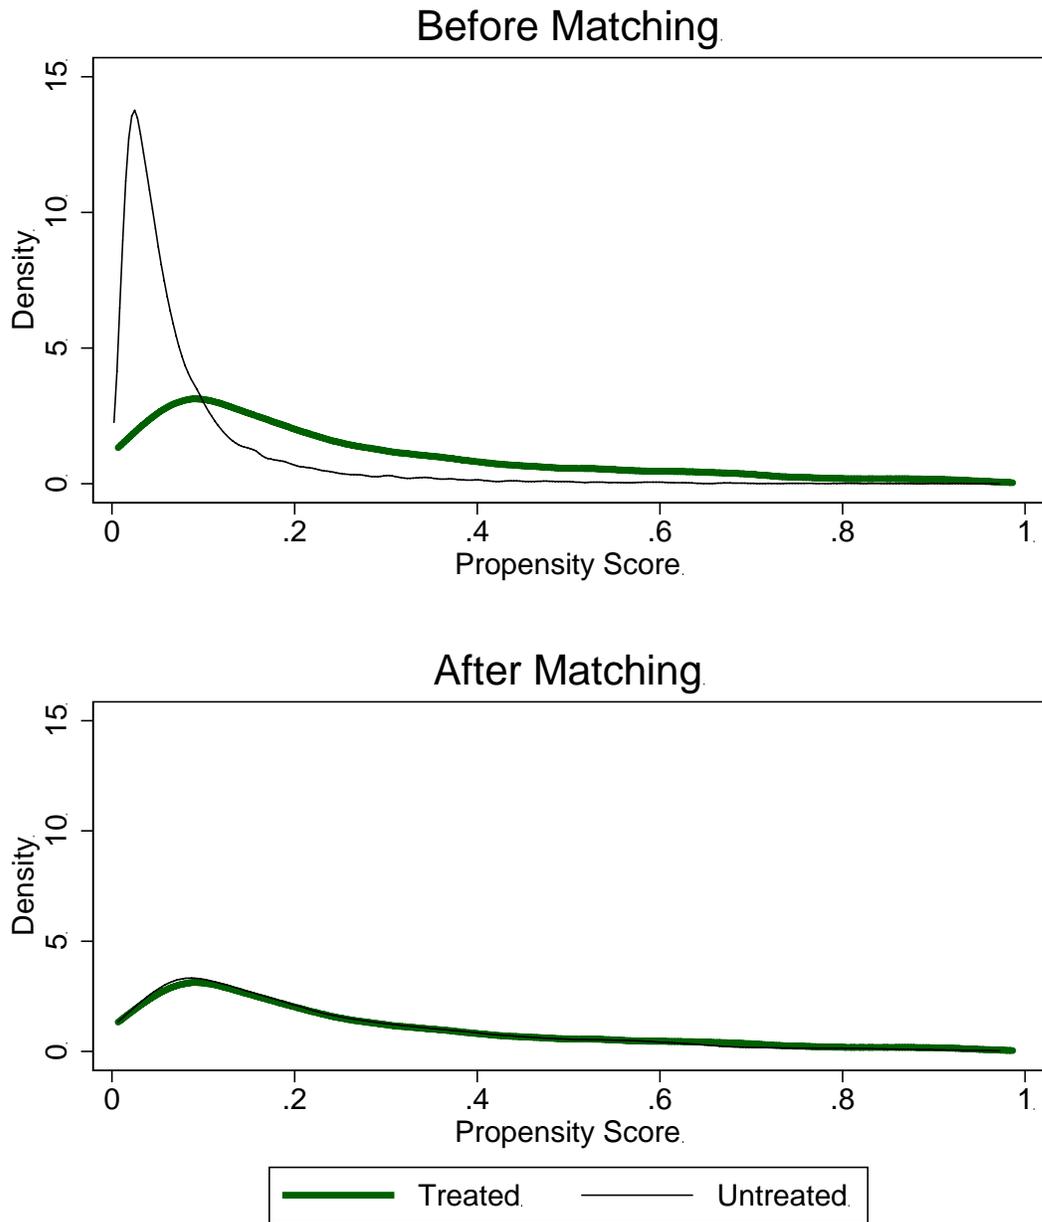

^b The post-discharge HbA_{1c} was assessed prior to censoring as the HbA_{1c} recorded at the closest date to 1 year following index hospitalization discharge, within the range for 6 to 18 months following discharge.

^c Calculated as the pre-post change in HbA_{1c} for the intensified regimen group minus the pre-post change in HbA_{1c} for the not intensified group.
