## Supplementary Figures

### 2 **Supplementary Figure S1. Representation of module Eigengenes.**

3

4

5 A dendrogram is used to cluster the module Eigengene for the 11 co-expression modules  
6 identified in the Weighted Gene Coexpression Network Analysis. Module eigengenes are  
7 also depicted using a heatmap for a better comprehension of their kinetics.

1    **Supplementary Figure S2. Key components of mTOR signaling pathway are early**  
 2    **regulated.**

3

4

5

1 Several components of mTORC1 show early changes in gene expression after SCI. Between  
2 these genes we can observe a downregulated after damage in the gene expression profiles  
3 of *tsc2* and *deptor*, and an up-regulation in gene expression profiles of *rps6kb1* and *eif4e*,  
4 associated to ribosome biogenesis and cap-depending translation, respectively. Both  
5 suggest an activation of mTOR pathway with an apparent focus in protein translate  
6 regulation.

1 **Supplementary Figure S3. Early inhibition of mTOR signaling pathway using Rapamycin**  
 2 **impairs swimming recovery.**

21 Similar results observed for swimming recovery after Torin1 treatment are reported with  
 22 Rapamycin treatment. **(a)** Quantification and statistical comparison for immunodetection  
 23 of ratio pS6/S6 using Western Blot. Data indicate the mean ± SEM, from five independent

1 experiments. \*P <0.05, \*\*\*P < 0.001, from a t-test comparing temporal point to control  
2 condition at 0 dpT. **(b)** Western Blot for S6, p-S6, 4EBP1 and p-4EBP1 in total protein  
3 extracts obtained from spinal cords at 0 hpT and 21 hpT, from *X. laevis* incubated with  
4 DMSO (vehicle), Rapamycin 5 µM and 10 µM, for evaluation of mTOR signaling pathway  
5 activation. **(c)** Dotplot of swimming distances, of animals treated with vehicle (black dots)  
6 and 10 µM Rapamycin (red dots), measured at 10 and 15 dpT. Data indicate the mean ±  
7 SEM, from three independent experiments. \*\*\*P <0.001, \*\*\*\*P <0.0001, from a Mann  
8 Whitney U-test comparing Torin1 treated animals to control, at each time point. **(d)**  
9 Dotplot of swimming distances, of animals treated with vehicle (black dots) and Torin1 1  
10 µM (red dots), measured at 10 dpS. Data indicate the mean ± SEM, from one experiment.  
11 ns: not significant, from a Mann Whitney U-test comparing Torin1 treated animals to  
12 control, at each time point. **(e)** Western Blot for S6 and p-S6 in total protein extracts  
13 obtained from spinal cords at 1 dpS, from *X. laevis* incubated with DMSO (vehicle) and  
14 Torin1 1 µM, for evaluation of mTOR signaling pathway inhibition in swimming recovery  
15 assay. All the blots included in this figure were derived from the same experiment and  
16 were processed in parallel. **(f)** Dotplot of swimming distances, of animals treated with  
17 vehicle (black dots) and 10 µM Rapamycin (red dots), measured at 10 dpS. Data indicate  
18 the mean ± SEM, from two independent experiments. ns: not significant, from a Mann  
19 Whitney U-test comparing Rapamycin treated animals to control, at each time point.  
20  
21  
22

1      **Supplementary Figure S4. Early inhibition of mTOR increased the number of TUNEL<sup>+</sup>**  
2      **cells at 1 dpT.**

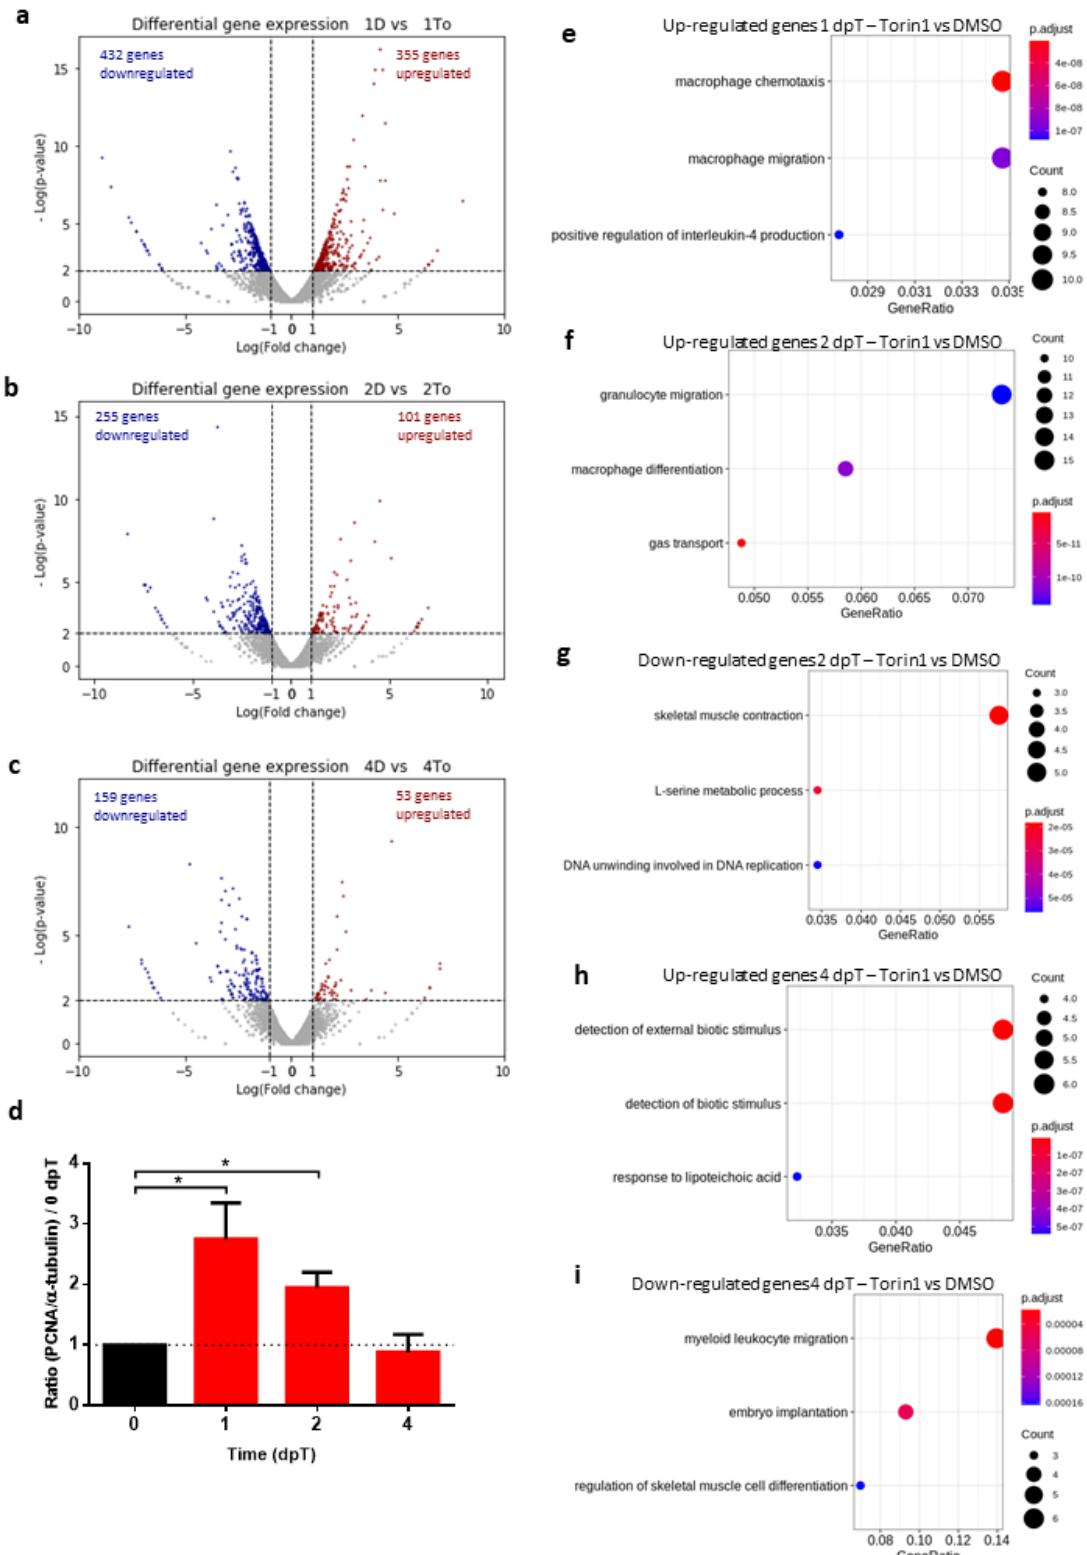

3      Effect of Torin1 on cell death analyzed by TUNEL. **(a)** Representative images of longitudinal  
4      cryosections of spinal cord at 1dpT, 300  $\mu$ m rostral (upper part) and 300  $\mu$ m caudal (lower  
5      part) to the injury site. TUNEL positive cells (green) and the nuclear staining Hoechst (blue)  
6      are shown. Scale bar = 50  $\mu$ m. **(b)** Western Blot for p-S6, S6 and  $\beta$ -tubulin in total protein  
7      extracts obtained from spinal cords at 1 dpT, for evaluation of mTOR signaling pathway  
8      inhibition after Torin1 treatment. **(c)** Quantification of TUNEL positive cells in a defined  
9      spinal cord area (300  $\mu$ m rostral and caudal to the injury site). Data indicate the mean  $\pm$   
10     SEM, from four independent experiments. \* P < 0.05, from a non-parametric Mann  
11     Whitney test comparing Torin1 to vehicle treatments. All the blots included in this figure  
12     were derived from the same experiment and were processed in parallel.

13

14

1 **Figure S5. Summary of Differential Gene Expression and GO Enrichment analysis for**  
 2 **mTOR Inhibition mRNA-seq.**

1   **(a-c)** Differential gene expression analysis of mTOR Inhibition mRNA-seq at 1 **(a)**, 2 **(b)** and  
2   4 **(c)** dpT are summarized in volcano plots. **(d)** Quantification and statistical comparison for  
3   inmmunodetection of PCNA using Western Blot. Data indicate the mean ± SEM, from three  
4   independent experiments. \*P <0.05, from a t-test comparing temporal point to control  
5   condition at 0 dpT. **(e-i)** Three principal biological processes enriched are reported for  
6   upregulated genes at 1 **(e)**, 2 **(f)** and 4 **(h)** dpT and for downregulated genes at 2 **(g)** and 4  
7   **(i)** dpT.

1 **Supplementary Figure S6. Batch effect correction improve correlation between**  
 2 **transected time-series.**

1   **(a)** Heatmap show Spearman correlation calculated between temporal points in each time-  
2   series before batch effect correction. Correlation coefficient was calculated among all  
3   consistently detected genes. Biological replicates at 0 hpT in S1 and S2 are highlighted a  
4   black square. Correlation coefficients are indicated in each square and also accord to color  
5   bar. **(b)** Heatmap comparing Spearman correlation for samples used as overlapping points  
6   between time-series in transected condition before batch effect correction. The inset  
7   depicts the correlation for 0 hpT time points included in all time-series. **(c)** Spearman  
8   correlation after remove batch effect is illustrated for transected samples. Coefficient  
9   correlation was calculated between all genes that showed an effect after transection (BIC >  
10   0). If overlapping point highlighted a black square are compared with B we can to observe  
11   an improving in coefficient correlation.

22

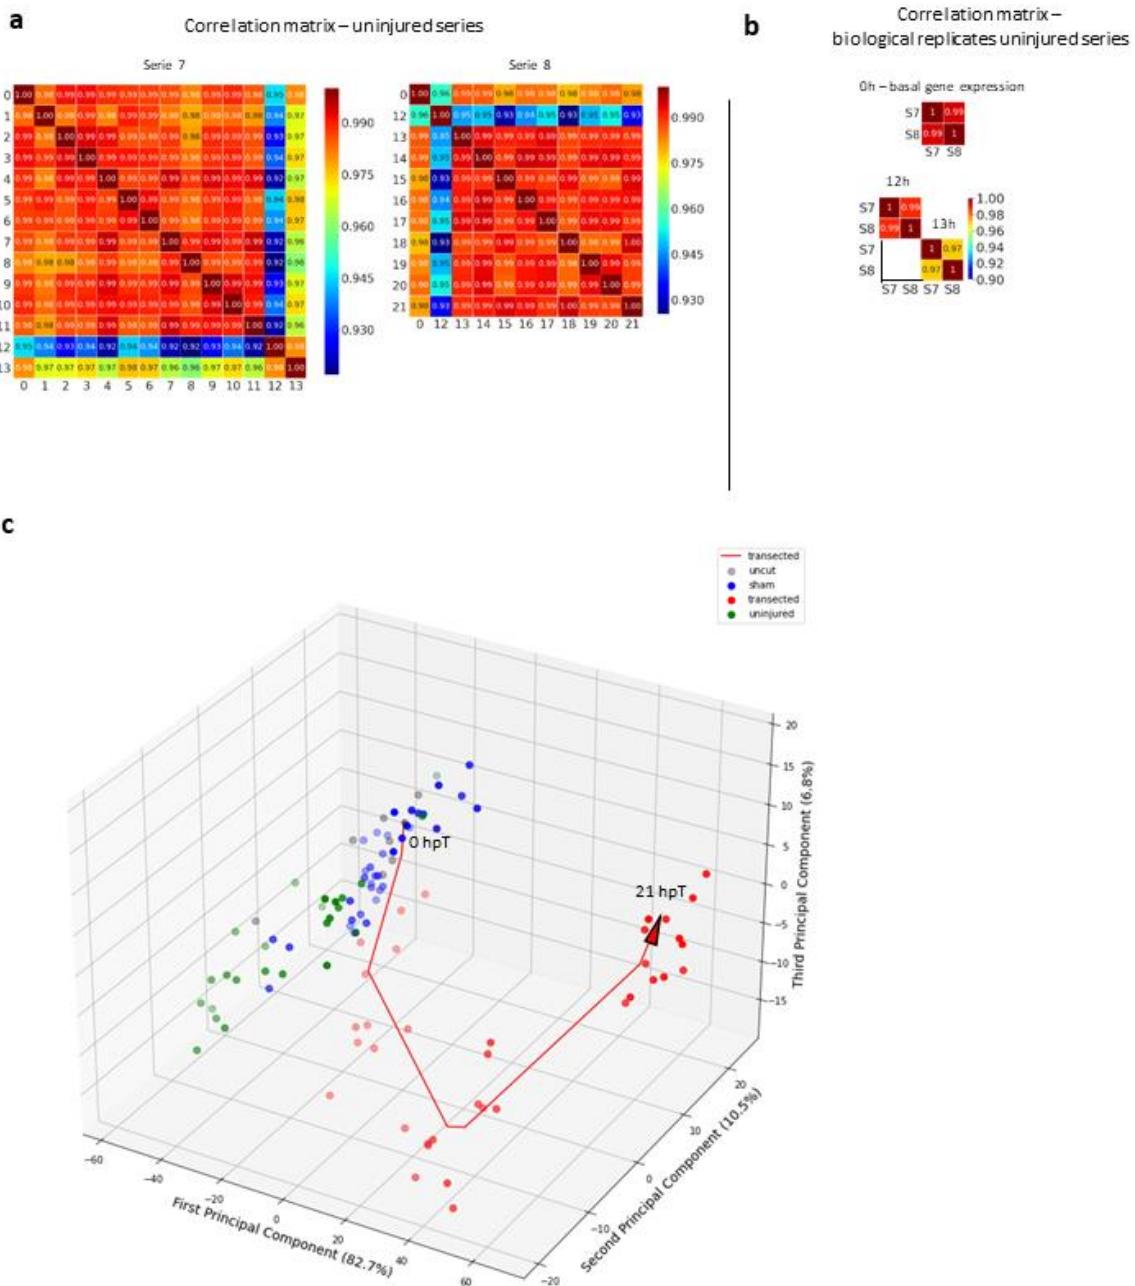

1    **Supplementary Figure S7. Batch effect correction improve correlation between sham**  
 2    **time-series.**

3  
 4  
 5    **(a)** Heatmap show Spearman correlation calculated between temporal points in each time-  
 6    series. Correlation coefficient was calculated among all consistently detected genes.  
 7    Biological replicates at 0 hpT in S1 and S2 are highlighted a black square. Correlation  
 8    coefficients are indicated in each square and also accord to color bar. **(b)** Heatmap  
 9    comparing Spearman correlation for samples used as overlapping points between time-  
 10   series in sham condition before batch effect correction. The inset depicts the correlation  
 11   for 0 hpT time points included in all time-series.

12

1 **Figure S8. Batch effect correction improve correlation between uninjured time-series.**

2

3

4

5

1 (a) Heatmap show Spearman correlation calculated between temporal points in each time-  
2 series before batch effect correction. Correlation coefficient was calculated among all  
3 consistently detected genes. Biological replicates at 0 hpT in S1 and S2 are highlighted a  
4 black square. Correlation coefficients are indicated in each square and also accord to color  
5 bar. (b) Heatmap comparing Spearman correlation for samples used as overlapping points  
6 between time-series in uninjured condition before batch effect correction. The inset  
7 depicts the correlation for 0 hpT time points included in all time-series. (c) 3D PCA Plot  
8 comparing samples of transected (red), sham (blue) and uninjured (green) conditions,  
9 including uncut samples used as 0 hpT for transected and sham conditions (grey). PCA was  
10 performed over the data of all consistently detected genes. Red line represents a B-Spline  
11 interpolation for transected data according to sampling time. Intensity color of dots for  
12 transected, sham and uninjured conditions is increasing with sampling time.

19

20

21

1 **Supplementary Figure S9. Individual gene expression profiles are affected by batch effect**  
 2 **between time-series.**

3  
 4

1 A poor overlapping is observed for some genes when gene expression profiles are  
2 constructed after merging all time-series. Graph in panels **a,b,c** and **d** represent four  
3 examples of genes affected by batch effect and **a', b', c'** and **d'** depicts the corresponding  
4 profiles after batch effect adjustment using the Combat function of the SVA package. Not  
5 all genes are affected equally by batch effects which could be observed when **d** is  
6 compared with **a, b** and **c**.

### Uncropped images of blots included in main figures

The images correspond to the western blot included in figure 4f.

The images correspond to the western blot included in figure 5b.

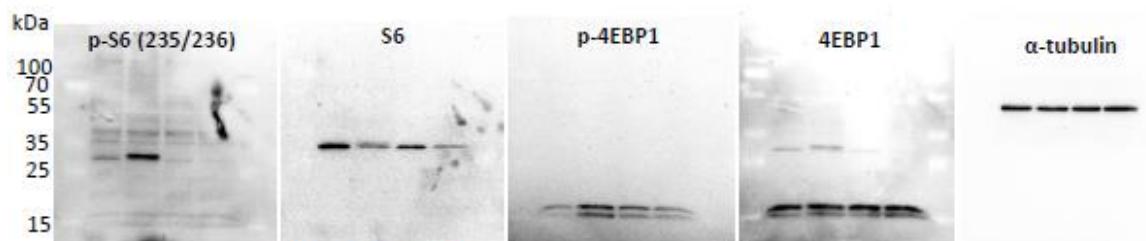

Both images are part of a unique membrane divided in two, each section of the membrane was incubated with different antibodies, as specified. These images correspond to the western blot included in figure 7q.

## Uncropped images of blots included in supplementary information

The images correspond to the western blot included in figure S3b.

Lanes 1 and 3 correspond to sham animals, and are the ones included in figure S3e.

Lanes 7 and 8 included in figure S4b. The figure includes three independent experiments (N=1, 2 and 3).
