Supplemental Table 2. Multivariate Cox proportional hazards model analysis of risk factors in patients undergoing cataract surgery alone using 2 different methods for defining baseline IOP and medications. Method 1 is the average of all available IOP and medication use data up to 1 year before the procedure. Method 2 is the IOP and medications being uses on the last visit before the procedure.

	Method 1			Method 2		
	Hazard ratio	Confidence interval	p value	Hazard ratio	Confidence interval	p value
Race (Caucasian)	0.50	0.13-1.91	0.31	0.80	0.20-3.28	0.76
Pre-operative IOP (1 mmHg)	0.87	0.74-1.02	0.09	0.92	0.80-1.07	0.30
Keratometry (1 diopter)	1.74	1.15-2.62	**0.008**	1.60	1.09-2.34	**0.02**
Axial length (1 mm)	1.58	1.10-2.29	**0.01**	1.51	1.05-2.19	**0.03**
Anterior chamber depth (1 mm)	0.22	0.07-0.68	**0.008**	0.23	0.09-0.60	**0.003**
