Supplementary Fig. S1. The relative mRNA expression levels of *adeB* and *adeS* in the three wild-type isolates (FA56, FA154, and F-1757) and their tigecycline-resistant subpopulations (FA#-R) and mutants obtained after serial passages in the antibiotic-free media (FA#-R-P10, FA#-R-P20, and FA#-R-P30). The expression was measured as a relative quantity by qRT-PCR using the reference gene *rpoB*.
