Supplemental Figure 4, Related to Figure 4. A) Intergene correlation analysis of genes associated with macrophage infiltration (*CD86*, *CSF1R*, *MRC1*, *CD163*) and the indicated metabolic genes using whole transcriptome data from the Decipher GRID™ registry data. B) *De novo* cholesterol biosynthesis pathway. C) Impact of the cholesterol biosynthesis pathway targeting agents cerulenin (inhibits FASN), atorvastatin (inhibits HMGCR) and zoledronic acid (inhibits farnesyl diphosphate synthase) on proliferation of PTE-24 and PT-09. D) Histogram of BODIPY-493/503 fluorescence in leukocyte populations within PTE-82 tumors. n=5, data reflects one of at least three independent experiments. E) Mean BODIPY-493/503 fluorescence intensity in myeloid populations within tumors from *Pten*^{pce-/-}/*Trp53*^{pce-/-}/*TMPRSS2-ERG*^{pce+} mice, 6 months post tamoxifen. Fluorescence minus one (FMO) is shown for tumor samples. n=4, data shown as the mean ± SEM. Similar results were observed in orthotopic models and 12 months post tamoxifen in *Pten*^{pce-/-}/*Trp53*^{pce-/-} and *Pten*^{pce-/-}/*Trp53*^{pce-/-}/*TMPRSS2-ERG*^{pce+} models.
