

Fig. S1. *Dnaaf3*-*mVenus* fusion gene was designed to include the X box (consensus nucleotide sequence RYYRYYN(1–3)RRNRAC) (Laurençon et al., 2007) and Forkhead binding motif (F motif) (consensus nucleotide sequence RYMAAYA) (Newton et al., 2012) motifs in the upstream regulatory region to keep the spatial-temporal pattern of the expression from its own promoter.

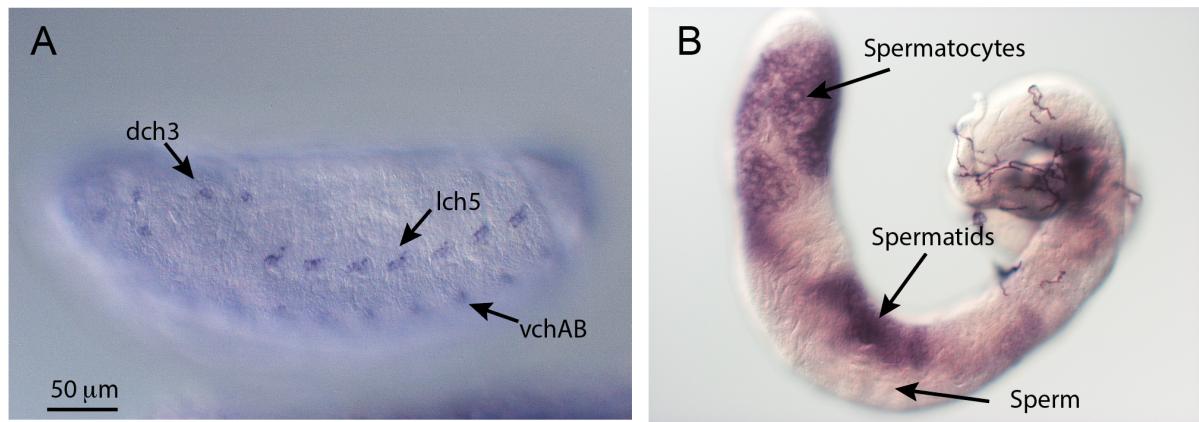

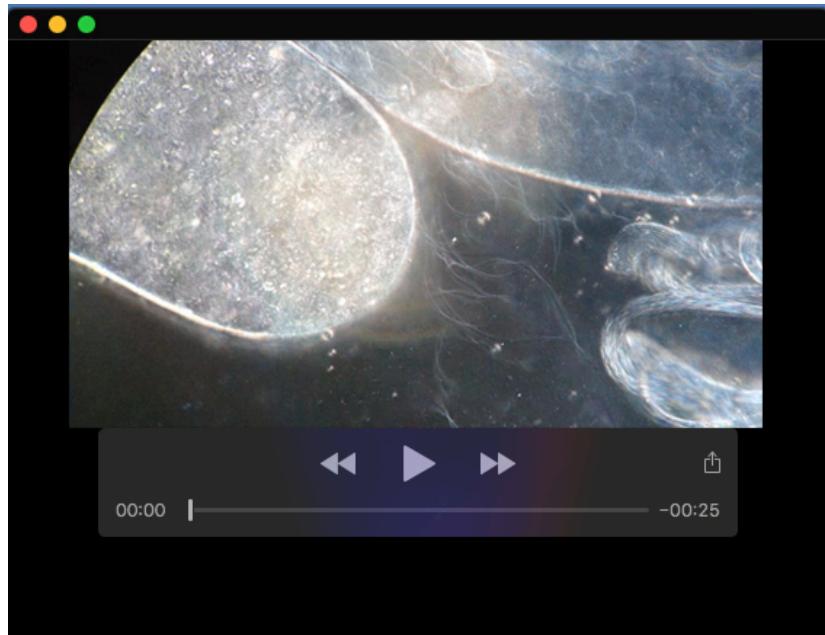

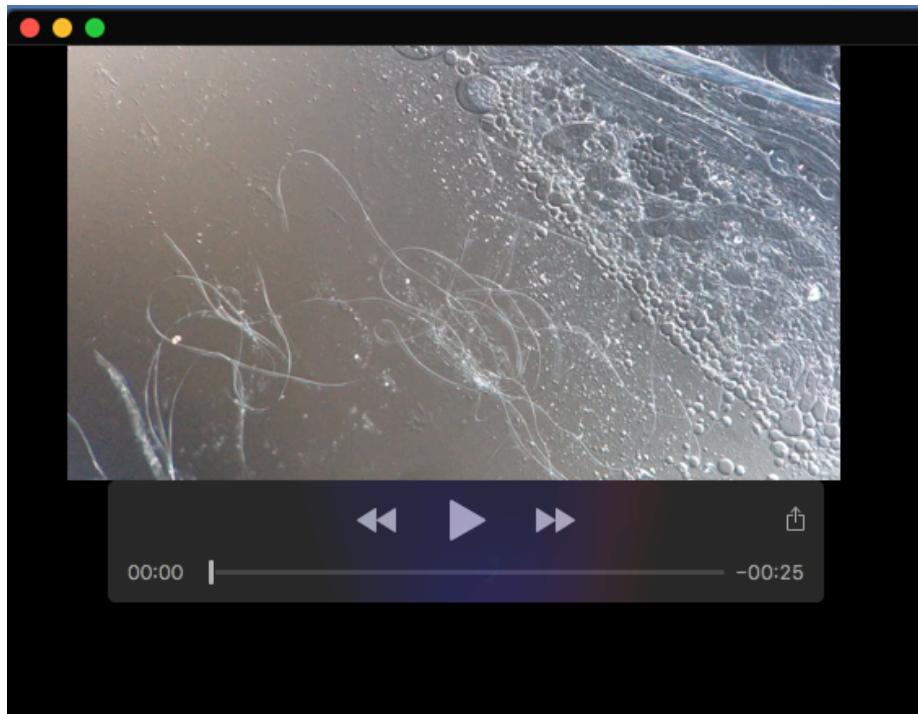

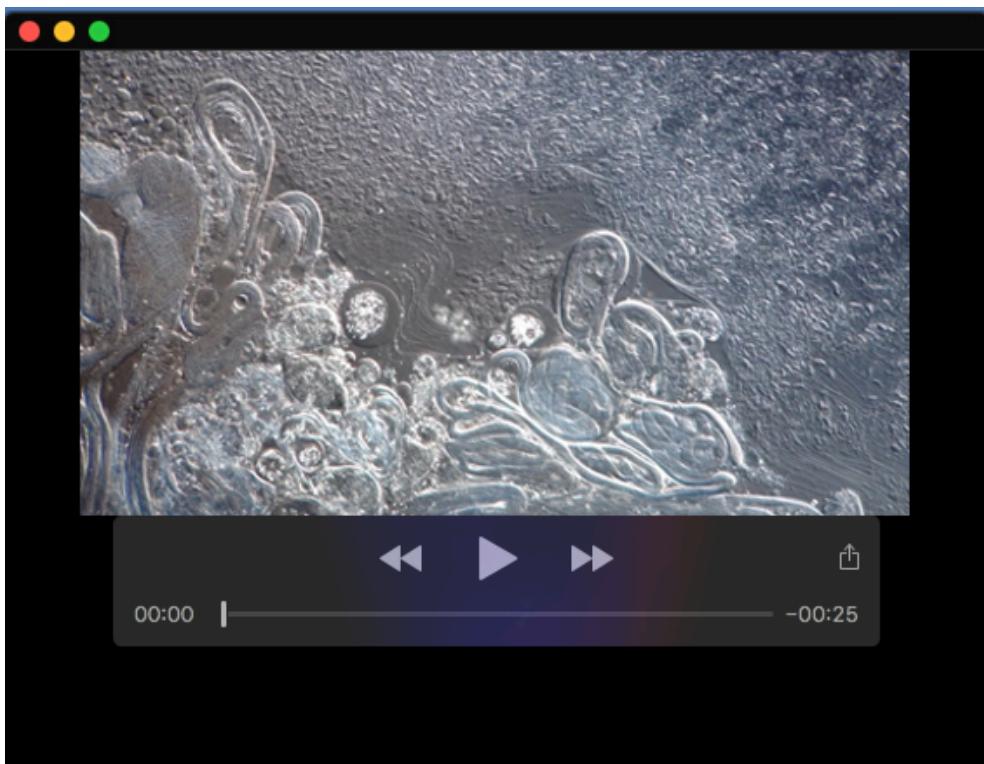

Fig. S2. *Dnaaf3* mRNA expression. (A) Stage 16 embryo. Expression is observed in the segmentally repeated locations expected for larval Ch neurons (see Fig. 1B). (B) Adult testis. The large nuclei identify the expressing cells near the tip as spermatocytes. Expression further along is likely to be in differentiating spermatids. No expression is seen in mature sperm.

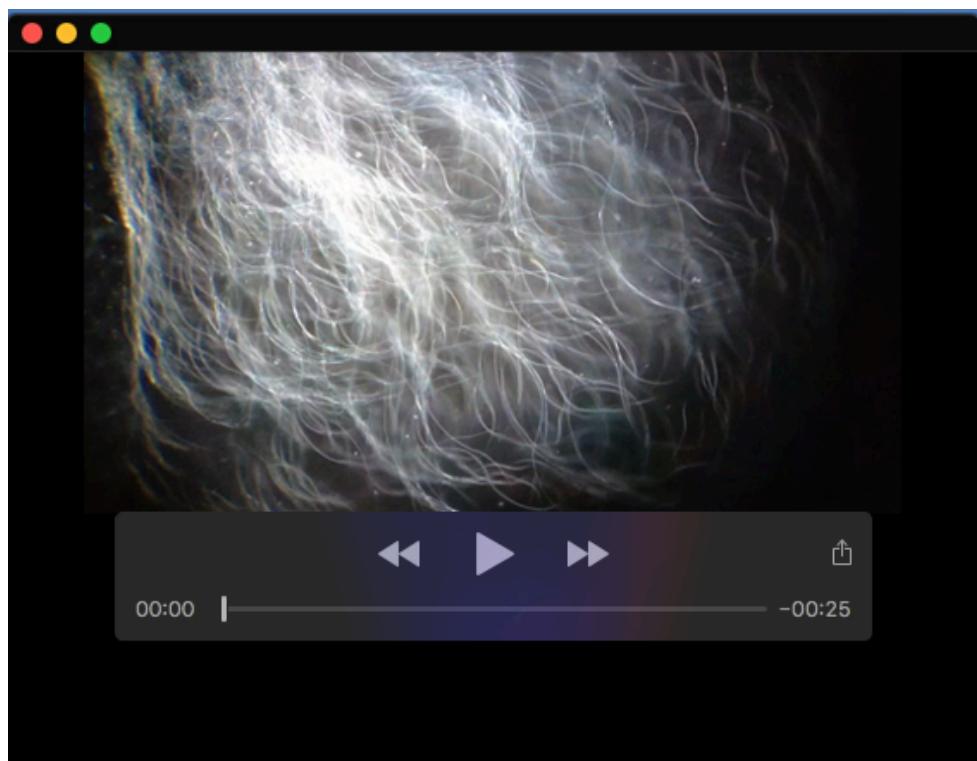

Movie 1. Sperm from *BamGal4* fly (control for RNAi)

Movie 2. Sperm from *BamGal4*; UAS-*Dnaaf3* RNAi fly (*Dnaaf3* knockdown)

Movie 3. Sperm from *Dnaaf3*^{4CR} homozygote

Movie 4. Sperm from *Dnaaf3*^{4CR} homozygote with *Dnaaf3-mVenus* fusion gene (mutant rescue)

Table S1. Ciliary motility proteins detected in adult testes, sorted by abundance
