

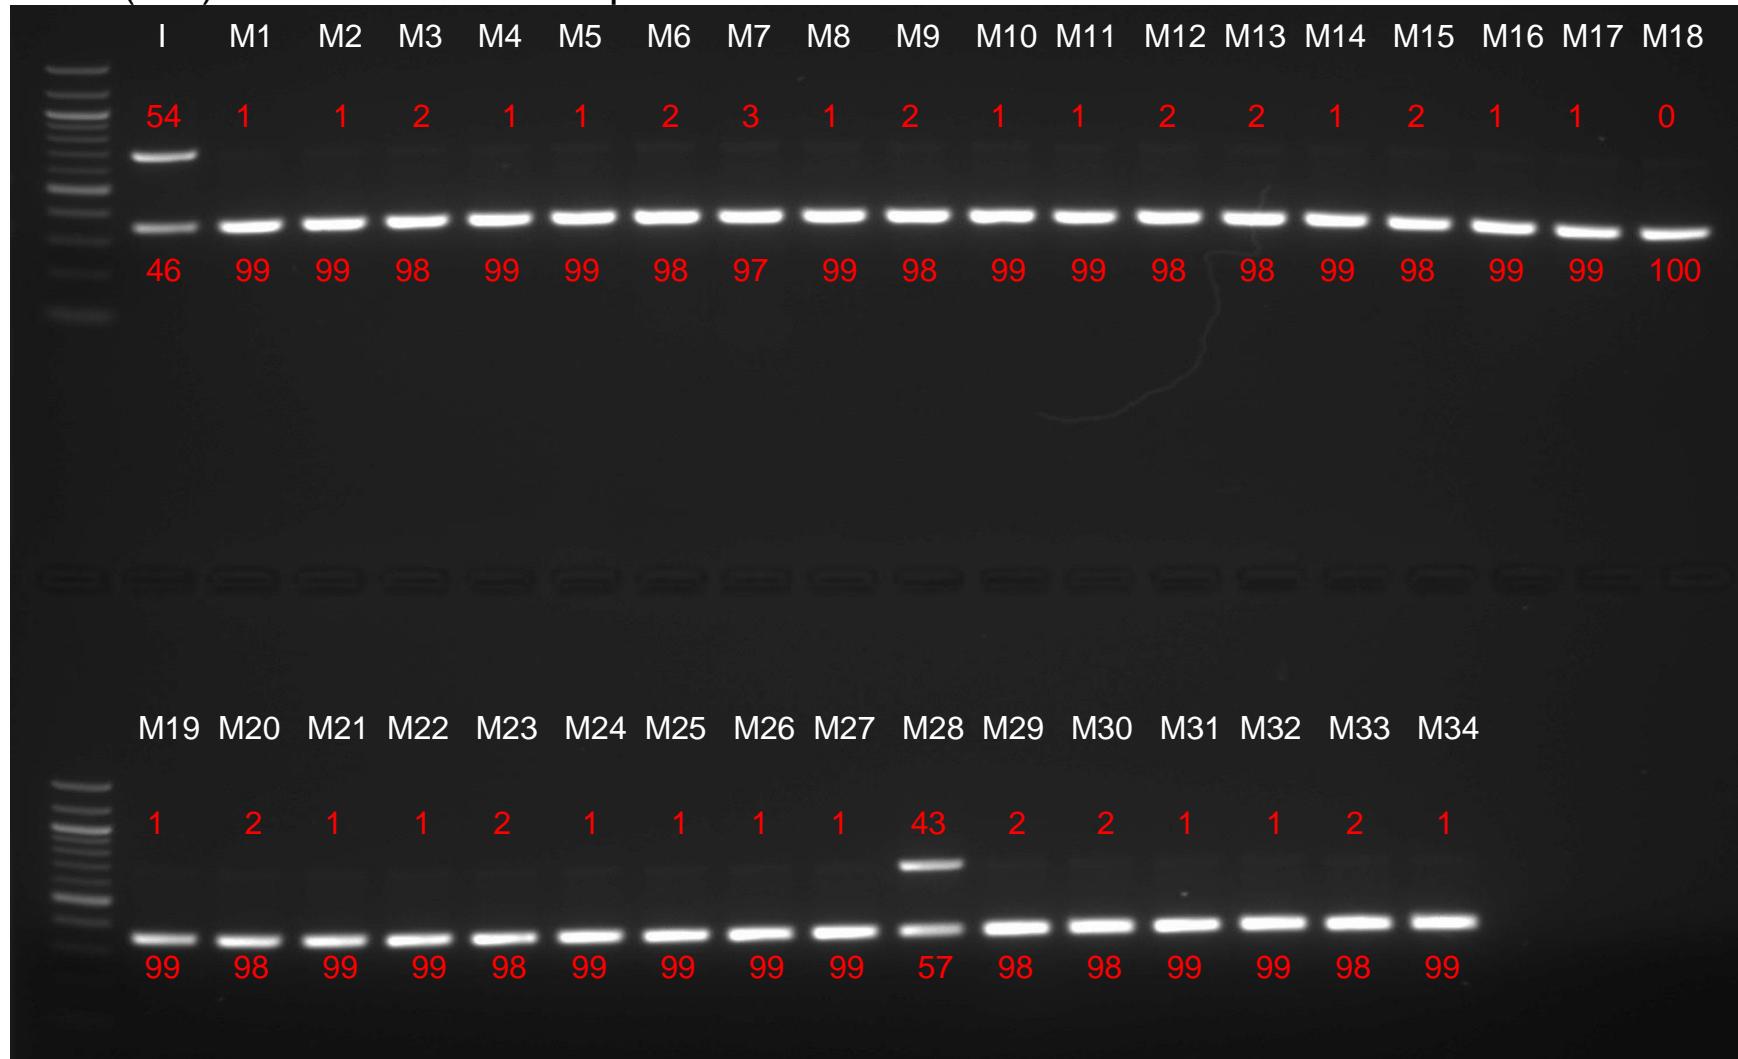

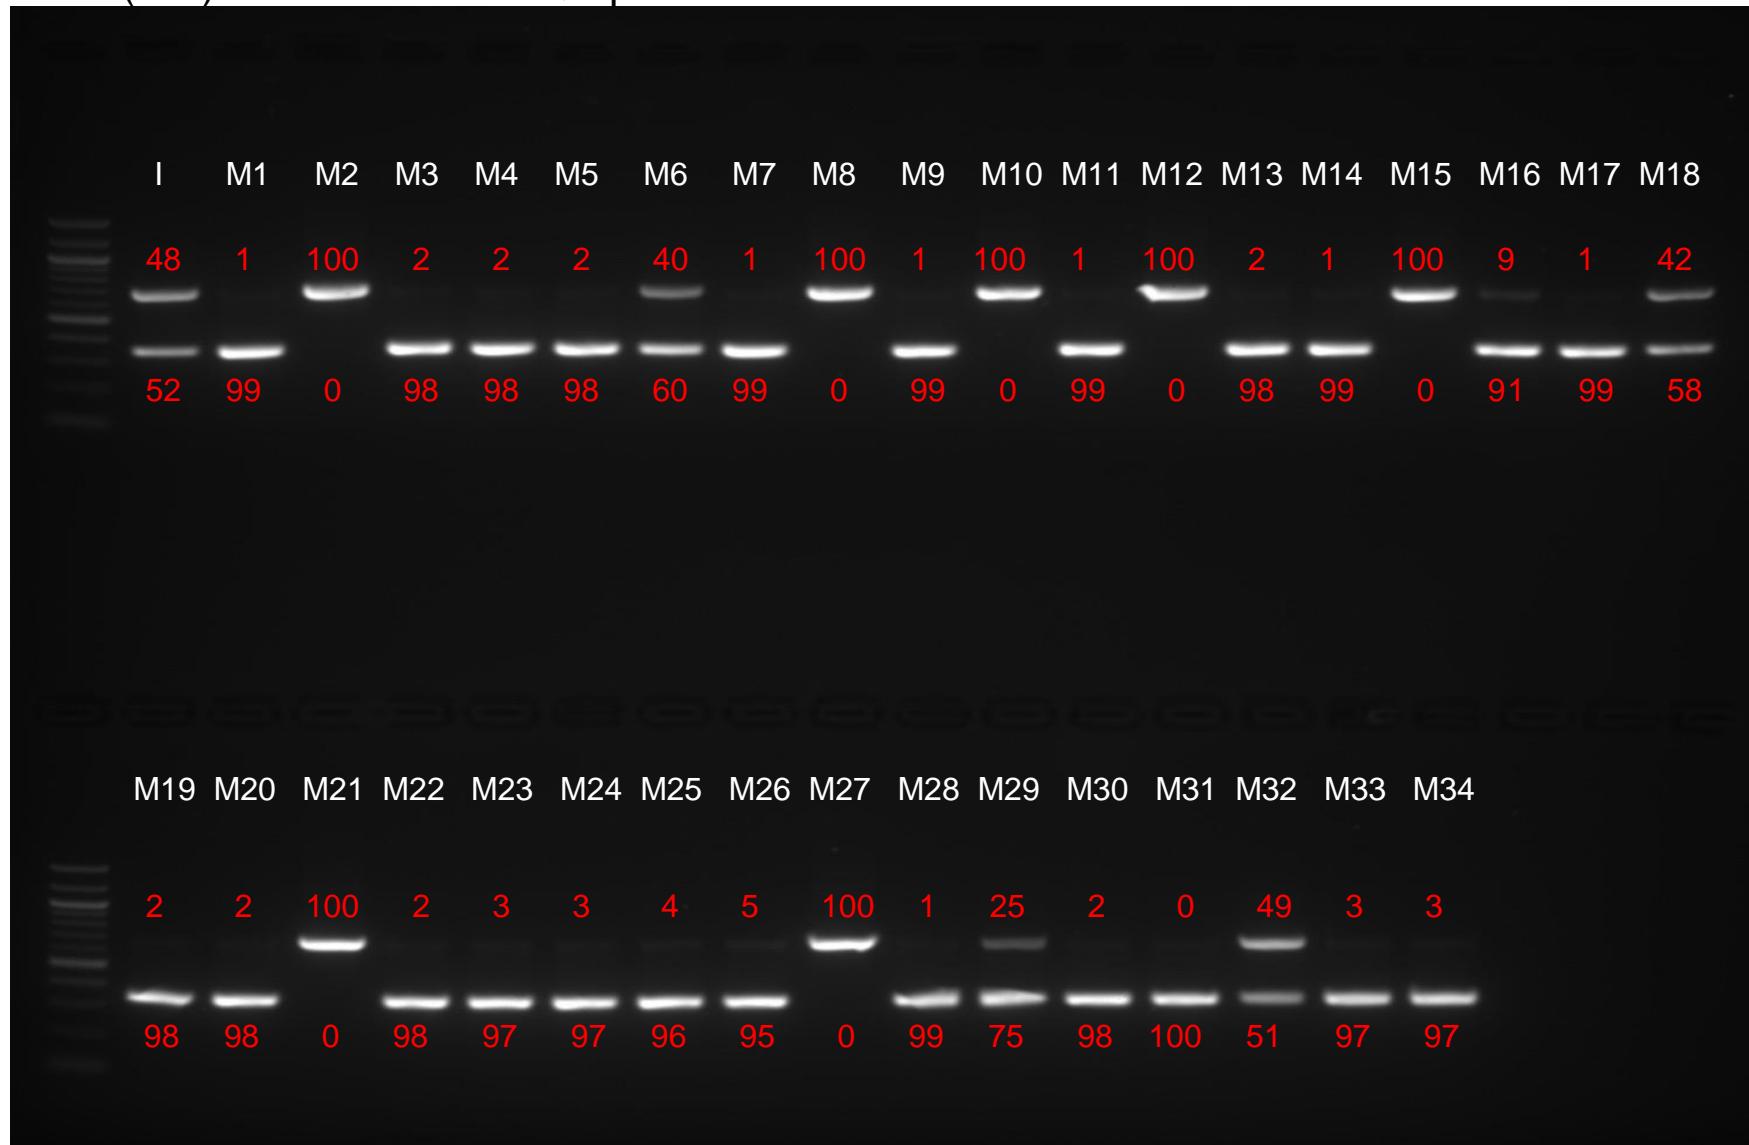

**Figure S2: Gel images of competition test results.** The raw data corresponding to Figures 1 and 2 are shown here. For each gel picture, the digestion result of the initial mix of viruses is shown in the first lane (I). The following lanes show the results in each mosquito sample (M#). Proportions of DNA as estimated by GelQuant.NET software are shown in red next to the relevant bands.

### SL07 (WT) vs SL07-E2-198Q-Apal
