**Figure S1.** The proportion of COVID-19 infected children who at various time points after discharge from hospital had one or more of the commonest continuing symptoms. Some children had more than one symptom.

The prevalence was calculated based on responses to the following questions: “Within the last seven days, has your child had any of these symptoms, which were NOT present prior to their Covid-19 illness? (If yes, please indicate below and the duration of the symptom/s) and “Please report any symptoms that have been bothering your child since discharge that are not present today. Please specify the time of onset and duration of these symptoms.”

**Figure S2.** Multivariable logistic regression model to identify pre-existing risk factors for post-COVID condition (using age as a continuous variable). Odds ratios and 95% CIs for presence of (A) any category of persistent symptoms at the time of follow-up and (B) two or more co-existing categories of persistent symptoms at the time of the follow-up. Neurological conditions include “neurological disorders” and/or “neurodisability”. Abbreviation: CI, confidence interval.

**Figure S3.** Multivariable logistic regression model to identify pre-existing risk factors for post-COVID condition (subgroup analyses in children  $\geq 6$  years of age). Odds ratios and 95% CIs for presence of (A) any category of persistent symptoms at the time of follow-up and (B) two or more co-existing categories of persistent symptoms at the time of the follow-up. Neurological conditions include “neurological disorders” and/or “neurodisability”. Abbreviation: CI, confidence interval.
