

**Supplementary Table 2.** Number and ratio of resection sites and pathologic diagnosis

| Variable                | Number (%) |
|-------------------------|------------|
| Site of lesions         |            |
| Face & neck             | 4 (20.0)   |
| Scalp                   | 1 (5.0)    |
| Upper extremity         | 4 (20.0)   |
| Lower extremity         | 4 (20.0)   |
| Trunk                   | 7 (35.0)   |
| Total                   | 20 pairs   |
| Pathologic diagnosis    |            |
| Neurofibroma            | 13 (32.5)  |
| Dermatofibroma          | 8 (20.0)   |
| Epidermal cyst          | 5 (12.5)   |
| Lipoma                  | 4 (10.0)   |
| Intradermal nevus       | 3 (7.5)    |
| Blue nevus              | 2 (5.0)    |
| Pilomatricoma           | 2 (5.0)    |
| Steatocystoma multiplex | 2 (5.0)    |
| Seborrheic keratosis    | 1 (2.5)    |
| Total                   | 40 (100)   |

Among the resection sites, trunk were the most common (7 pairs), followed by face and neck, upper extremity, lower extremity, and scalp. In pathologic diagnosis, neurofibroma were the most common (13) diagnosis.
