Supplementary material

1. SUPPLEMENTARY FIGURES

Supplementary Figure 1 - This figure is related to Fig. 3*C* and demonstrates the results of BRET analysis as the basis for the determination of binding domains of PEX26 to the newly identified interaction partners.

2. SUPPLEMENTARY TABLES

Supplementary Table 1 - This table is related to the Results section *"Interaction of wild-type and variant PEX26 with PEX6" and "PEX26 variant-induced edgetic perturbations of the peroxisomal interactome"* of the main manuscript and provides additional information on genotypes and phenotypes of *PEX26* variants investigated in this study.

Supplementary Table 2 - This table is related to Fig. 2*A* and provides the list of genes encoding peroxisomal proteins investigated in this study.

Supplementary Table 3 – This table relates to Fig. 2*C* and provides results from OMIM database research and analysis.

Supplementary Table 4 - This table is related to Fig. 4*B* and demonstrates the matrix of PPI for WT and variant PEX26 used as a basis for cluster analysis.

Supplementary Table 5 - This table is related to Fig. 4*A* and provides parameters of network analysis.

Supplementary Table 6 - This table is related to Fig. 4*C* and provides additional information on biochemical phenotype parameters.

3. SUPPLEMENTARY REFERENCES

References cited in the supplemental Tables and Experimental Procedures section described above are given.

SUPPLEMENTARY FIGURES

Supplementary Figure 1. Characterization of PEX26 binding domains to the newly identified interaction partner. Interaction matrix of full-length PEX26 and truncation constructs analyzed by BRET. Yellow nodes represent a positive interaction in at least one out of eight combinations tested, blue nodes represent negative interactions in all combinations, grey nodes represent those tested combinations that resulted in conflicting assertions.

SUPPLEMENTARY TABLES

Supplementary Table 1. Phenotypes and genotypes of *PEX26* variants investigated in this study.

p.Arg192Ter	0.203	61	0.333	2.649	37	0.074	1.006	4	60
Node removal	0.217	63	0.348	2.500	36	0.071	1.073	5	56

Parameters of network analysis are given for the peroxisomal network comprising PPI identified in this study merged with a dataset of known peroxisomal PPI that are directly or indirectly associated to the PEX26 network. Data are given for the network in dependence of variants in PEX26.

Supplementary Table 6. Correlation of edgetic pertubations to phenotypic parameters.

	Number of PPI	Protein amount	Matrix protein import (37°C)			Biochemical score
			Catalase	PTS1	PTS2	
WT	18	30	10	10	10	60
p.Leu153Val	14	15	7	8	10	40
p.Leu44Pro	12	30	0	0	0	30
p.Leu45Pro	12	30	0	0	0	30
p.Pro118Arg	10	n.a.	n.a.	n.a.	n.a.	n.a.
p.Gly89Arg	10	15	0	0.5	0	15.5
p.Arg98Trp	10	15	2	7	7	31
p.Pro117Leu	9	15	0	2	1	18
Correlation to number of PPI	Pearson r	0.56	0.89	0.65	0.67	0.95
	P-value	0.187	0.008	0.115	0.102	0.001

Number of protein-protein interactions (PPI) derived from BRET experiments are depicted for each variant and WT PEX26. The biochemical score is weighted 30-10-10-10-10 with respect to protein amount (Furuki et al., 2006), catalase import, PTS1-dependent import, and PTS2 dependent import to yield a total of 60 for WT PEX26. For the protein amount, a value of 30 reflects a protein stability comparable to the WT PEX26 and a score of 15 reflects reduced but residual protein stability. For peroxisomal matrix protein import (Matsumoto et al., 2003) a score of 10 corresponds to 100% of matrix protein import.
