Table S1. List of fungal strains used in this study and created strains with their corresponding transformed donor DNA

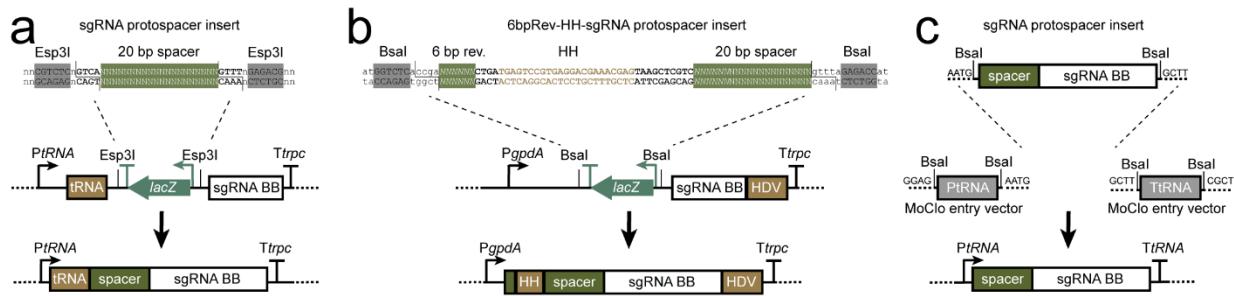

Figure S1. Representation of different sgRNA transcription unit assembly methods. (a) Ligation of the sgRNA target sequence carrying double-stranded-DNA into sgRNA recipient cloning site, using Esp3I restriction sites for PtRNA driven and tRNA-linked transcripts, (b) Ligation of HH-sgRNA (and 6 bp inverted repeat of the spacer sequence) using BsaI sites for Pgpda driven HH-sgRNA-HDV-based transcription (c) Ligation of sgRNA sequence using entry vectors and BsaI restriction-ligation-based assembly for creating functional sgRNA transcription units.
