

**S2 Table. Other parameter values used to simulate SARS-CoV-2 spread.**

Parameter	Value	Reference
Initial fraction of population vaccinated	50%	[1]
Daily vaccine uptake rate (% susceptibles vaccinated/day)	1%	[1] (upper bound)
Initial fraction of population previously infected	30%	[2]
Initial fraction of population currently infected	0.13%	$\frac{(\text{current case count})(\text{mean infection duration})}{\text{total US population}}$
Mean infection duration	10 days	[3]
Mean duration of immunity	18 months	[4] (upper bound)
$R_0$ of WT SARS-CoV-2	3.32	[5]
Total population size	300 million	approximate size of US population
