

Figure S2. Genetic structure of *bla*_{OXA181}-carrying plasmid pP3_O1.

BLASTN comparison between the *bla*_{OXA181}-carrying plasmid pP3_O1 (central ring) identified from a carbapenem resistant ST16 outbreak isolate and a reference plasmid from GenBank (Accession number: CP041930.1). The outermost ring indicates the gene annotations of the pP3_O1 plasmid. The ISL3-like element is highlighted in red. Cyan and pink colors indicate the *bla*_{OXA181} gene and IS26, respectively.
