Table S5. Meta-analytical results on the frequency of pheochromocytoma and/or paraganglioma (PPGL) among patients with von Hippel-Lindau (vHL), when considering only studies with more than 25 participants.

	N studies	Frequency, % (95% CI)	Q Cochran p value	I²
Participants with VHL (all VHL types)				
Frequency of participants with PPGL	25	18.5 (14.4 – 23.4)	<0.001	91.5%
Participants with VHL type 2				
Frequency of participants with PPGL	15	60.6 (50.3 – 70.1)	<0.001	76.3%
Participants with PPGL in VHL type 2A	4	57.2 (47.2 – 66.6)	0.073	55.0%
Participants with PPGL in VHL type 2B	2	55.0 (28.4 – 79.0)	0.020	81.6%
Participants with PPGL in VHL type 2C	–	–	–	–
