

Supplementary Figure 3

A

B

Supplementary figure 3. *Irf8*^{R294C} mutation impairs type I IFN production upon NDV infection in HEK293T cells. HEK293T cells stably expressing IRF8^{WT} or IRF8^{R294C} separately were infected with NDV for indicated time points and transcript levels of (A) *Ifna* and (B) *Ifnb* were analysed through qRT-PCR. Data are representative of three independent experiments with error bar representing \pm standard error of mean (SEM).
