

Fig. S4. Correlation of FAIRE signal between EWS894 FFPE tissue replicates. Correlation of genome-wide FAIRE signal, in 300 bp bins, among EWS894 FFPE FAIRE replicates ($n = 3$) within each block (block 1 replicates, yellow; block 2 replicates, maroon). Correlation of genome wide signal between the two FFPE blocks also shown in black. Correlation coefficient, R , depicted for each comparison.
