

Fig. S11 Co-culture of intestinal organoids and intestinal T cells. (related to Fig. 6)

a FACS plots show the integrin αE expression of the co-cultured T cells. **b** Intestinal organoids were mixed with T cells isolated from the small intestine of WT mice at indicated ratio and co-cultured in the Matrigel. Representative images of the co-cultured organoids and T cells (red) at Day1 were shown (left), red arrowheads indicate the T cells in contact with the organoid cells. Scale bars, 50 μm . Graphs show the average number of contacted T cells per organoid (right), more than 8 fields for optical sections were analyzed under each condition and data are represented as mean \pm SEM.
