

Supplemental Digital Content 7. Viral load by study visit for the participant who met SVW but not CVW criteria at Week 132 and developed resistance mutations M184V and R263R/K. Dashed lines at 50 and 200 copies/mL represent defined levels of virologic suppression and non-response, respectively. Data series plotted according to actual dates of HIV-1 RNA analysis testing. CVW, confirmed virologic withdrawal; IN, integrase; RT, reverse transcriptase; SVW, suspected virologic withdrawal; WT, wild-type.
