

SUPPORTING INFORMATION

Tumor suppressor p53 promotes ferroptosis in oxidative stress conditions independent of modulation of ferroptosis by p21, CDKs, Rb and E2F.

Nishanth Kuganesan, Samkeliso Dlamini, LM Viranga Tillekeratne and William R Taylor

S. Fig1. CDK2|CycE overexpression inhibits ferroptosis induced by RSL3 or Erastin in NARF2 cells. NARF2 pBpuro cells were transduced with CMV or CDK2/CycE adenoviruses for 48h at the indicated MOI. After that, cells were treated with Erastin or RSL3 as mentioned for 48 h and viability was measured using methylene blue. * $p < 0.05$ based on comparing CMV to K2/E infected samples using a student's t test.
