

The epidemiology of UK autoimmune liver
disease varies with geographic latitude

Supplementary figures

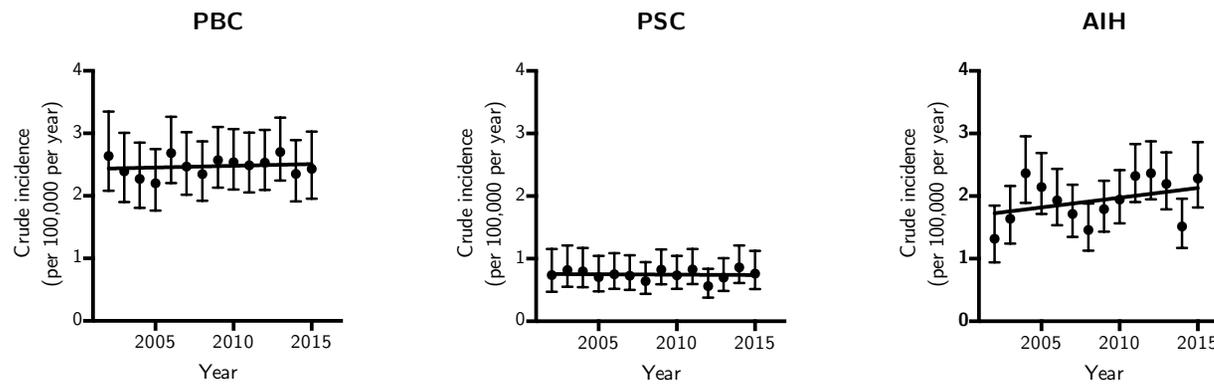

Figure S1: Crude incidence per 100 000 per year of autoimmune liver disease over the study period. There was no significant change for any of the diseases over the study period. For PBC, $0.01(-0.02 \text{ to } 0.03)/100\,000/\text{year}/\text{year}$; $r^2=0.023$; $p=0.693$. For PSC, $0.00(-0.01 \text{ to } 0.01)/100\,000/\text{year}/\text{year}$; $r^2=0.004$; $p=0.837$. For AIH, $0.03(-0.02 \text{ to } 0.08)/100\,000/\text{year}/\text{year}$; $r^2=0.130$; $p=0.205$.

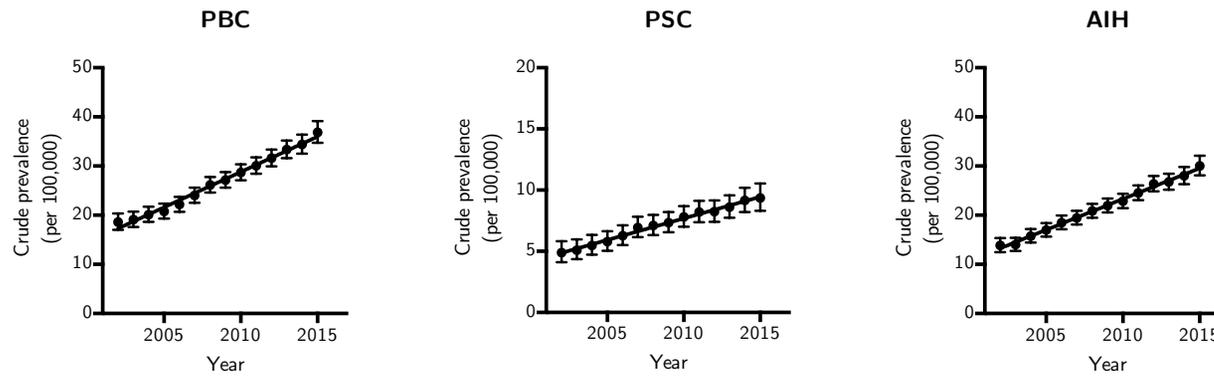

Figure S2: Crude prevalence per 100 000 over time at year end for each year of the study period. Prevalence increased over the study period for each of the autoimmune liver diseases. For PBC, there was an increase of 1.44(1.35-1.53)/100 000/year, $r^2=0.991$, $p<0.001$; PSC, there was an increase of 0.35(0.33-37)/100 000/year, $r^2=0.991$, $p<0.001$; For AIH, there was an increase of 1.26(1.20-1.31)/100 000/year, $r^2=0.996$, $p<0.001$

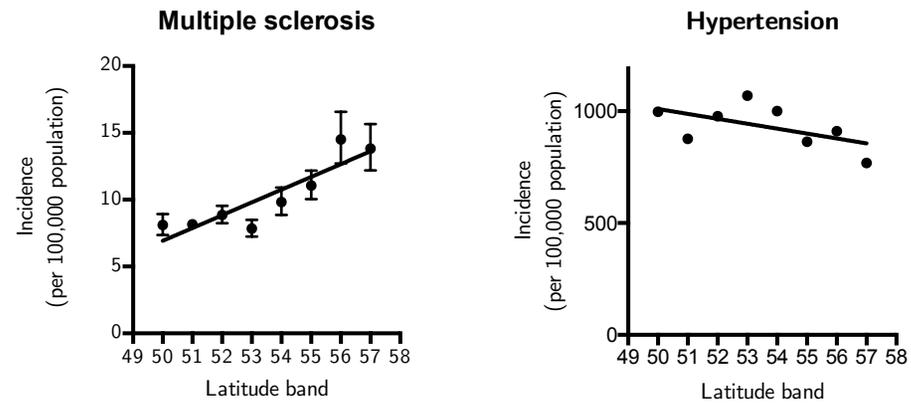

Figure S3: Incidence of multiple sclerosis and hypertension by latitude band. Figures presented are after adjustment for variations in sex, age, deprivation score, and smoking status. For multiple sclerosis, a significant positive correlation was present at $0.657(0.249 \text{ to } 1.065)/100\,000/\text{degree}$; $r^2=0.721$; $p=0.008$. For hypertension, no significant correlation was present at $-5.02(-30.27 \text{ to } 20.23)$; $r^2=0.038$; $p=0.644$.

Supplementary Tables

Disease	Code	Description
Primary biliary cholangitis	J616000	Primary biliary cirrhosis
Primary sclerosing cholangitis	J661700	Primary sclerosing cholangitis
Autoimmune hepatitis	J661700	Chronic active hepatitis
	J614111	Autoimmune chronic active hepatitis
	J63B.00	Autoimmune hepatitis
Multiple sclerosis	F20..00	Multiple sclerosis
	F20..11	Disseminated sclerosis
	F200.00	Multiple sclerosis of the brain stem
	F201.00	Multiple sclerosis of the spinal cord
	F202.00	Generalised multiple sclerosis
	F203.00	Exacerbation of multiple sclerosis
	F204.00	Benign multiple sclerosis
	F205.00	Malignant multiple sclerosis
	F206.00	Primary progressive multiple sclerosis
	F207.00	Relapsing and remitting multiple sclerosis
	F208.00	Secondary progressive multiple sclerosis
	F20z.00	Multiple sclerosis NOS
Hypertension	G24..00	Secondary hypertension
	G240.00	Secondary malignant hypertension
	G240z00	Secondary malignant hypertension NOS
	G241.00	Secondary benign hypertension
	G241z00	Secondary benign hypertension NOS
	G244.00	Hypertension secondary to endocrine disorders
	G24z.00	Secondary hypertension NOS
	G24z000	Secondary renovascular hypertension NOS

G24zz00	Secondary hypertension NOS
G25..00	Stage 1 hypertension (NICE - Nat Ins for Hth Clin Excl 2011)
G25..11	Stage 1 hypertension
G250.00	Stage 1 hyperten (NICE 2011) without evidnce end organ damge
G251.00	Stage 1 hyperten (NICE 2011) with evidnce end organ damge
G26..00	Severe hypertension (Nat Inst for Health Clinical Ex 2011)
G26..11	Severe hypertension
G28..00	Stage 2 hypertension (NICE - Nat Ins for Hth Clin Excl 2011)
G2y..00	Other specified hypertensive disease
G2z..00	Hypertensive disease NOS
Gyu2.00	[X]Hypertensive diseases

Table S1: Diagnostic codes used in study.

Category	Subcategory	PBC incidence (/100 000/year)			PSC incidence (/100 000/year)			AIH incidence (/100 000/year)

Table S2: Incidence of primary biliary cholangitis (PBC), primary sclerosing cholangitis (PSC), and autoimmune hepatitis (AIH) for the time period 2002-01-01 to 2016-05-10. ‘Adjusted’ figures are adjusted for one or all of latitude, sex, age, Townsend deprivation quintile, and smoking status by direct standardisation as appropriate. Figures are per 100 000 population/year with 95% confidence intervals.

Year	PBC n	PBC incidence	PSC n	PSC incidence	AIH n	AIH incidence
2002	68	2.64 (2.08-3.35)	19	0.74 (0.47-1.16)	34	1.32 (0.94-1.85)

Table S4: Prevalence of primary biliary cholangitis (PBC), primary sclerosing cholangitis (PSC), and autoimmune hepatitis (AIH) for 2015. ‘Adjusted’ figures are adjusted for one or all of latitude, sex, age, Townsend deprivation quintile, and smoking status by direct standardisation as appropriate. Figures are per 100 000 population with 95% confidence intervals.

Table S9: Age at disease incidence 2002-2016 by year of diagnosis for PBC, PSC, and AIH. Figures denote median age and interquartile range. For PBC, there was no significant change over time ($-0.09(-0.39$ to $0.21)$ years/year; $r^2=0.033$, $p=0.532$). For PSC, there was no significant change over time ($0.59(-0.06$ to $1.26)$ years/year; $r^2=0.241$, $p=0.074$). For AIH, there was a significant increase in age of incidence over time ($0.42(0.15$ to $0.70)$ years/year; $r^2=0.483$, $p=0.006$).
