10 Supplemental Figure Legends

11 Supplemental Figure 1 - 8

12 Supplemental Table 1

13

14 **Supplemental Figure legends**

15 **Supplemental Figure 1. PTEN was dissociated from the plasma membrane upon PI3K**
16 **inhibition through the membrane recruitment of WWP1.**

17 **(A)** Negative loading controls of subcellular fractionation in MDA-MB-231 cells treated with
18 multiple PI3K inhibitors. Related to Fig. 1C. **(B)** Representative immunofluorescent images of
19 PTEN subcellular localization. MDA-MB-231 cells stably expressing shWWP1 were treated
20 with BKM120 for 12 h. Bar, 10 μ m. **(C)** Binding of WWP1 to PTEN in MCF7 and MDA-MB-

21 231 cells upon PI3K inhibitor treatment. Total lysate from each cell was immunoprecipitated
22 with anti-PTEN beads 24 h after the treatment with 1 μ M of PI3K inhibitors. **(D)** PIP binding
23 assay for WWP1. 293T cells were transfected with MYC-WWP1 and subsequently
24 immunoprecipitated with PI(4,5)P₂, PI(3,4,5)P₃, or control beads.

25

26 **Supplemental Figure 2. *WWP1* depletion improved the efficacy of BKM120 in a PTEN-**
27 **dependent manner.**

28 **(A)** Dose response curve of BKM120 in indicated breast cancer cell lines. The upper panels show
29 cells in which PTEN is expressed and the lower panels show cell lines where PTEN is not
30 expressed. Each dot shows mean \pm SD of duplicated assay. **(B)** Dose response curve of BKM120
31 in MDA-MB-468 cells stably expressing Flag-PTEN and shWWP1. Each dot shows mean \pm SD
32 of triplicated assay. **(C)** Evaluation of AKT activity in MDA-MB-468 cells upon PTEN
33 expression in *WWP1* deficient setting. Cells were treated with 1 μ M of BKM120 for 48 h and
34 subjected to WB.

35

36 **Supplemental Figure 3. *WWP1* was upregulated in isogenic resistant cells and its inhibition**
37 **improved the sensitivity to PI3K inhibitors.**

38 **(A)** and **(B)** Dose response curve of BKM120 and IC₅₀ values in isogenic resistant MDA-MB-
39 231 **(A)** and MCF7 **(B)** cells. Each dot is shown as mean \pm SD in duplicated assay. **(C)** Relative
40 expression levels of WWP1 mRNA in isogenic resistant cells. Each plot is shown as mean \pm SD
41 in triplicated assay (*p < 0.05, **p < 0.01, one-way ANOVA followed by Tukey-Kramer
42 multiple comparisons test). **(D)** ChIP qPCR assay to evaluate MYC binding capacity on *WWP1*

43 promotor region. Chromatin fractions of MDA-MB-231 parental/resistant cells were
44 immunoprecipitated with anti-Myc or H3 beads and subjected to qPCR. JunB served as positive
45 control for MYC binding site. Data are shown as mean \pm SD (**P < 0.01, ***P < 0.005,
46 triplicate experiments, Student's *t* test). (E) Membrane and cytosol fractions of MCF7 cells
47 overexpressing HA-WWP1. Cells were treated with 1.0 μ M of BYL719 for 48 h and subjected to
48 WB. LRP6 and HSP90 served as membrane and cytosol markers, respectively. (F) Analysis of
49 AKT and S6 activity in MCF7 resistant HD cells upon stable expression of WWP1 shRNA. Cells
50 were treated with 1.0 μ M of BYL719 for indicated time and subjected to WB.

51

52 **Supplemental Figure 4. Combination therapy with PI3K and WWP1 inhibitor**
53 **synergistically suppressed cell growth in a PTEN dependent manner.**

54 (A) and (B) 3-D plot of synergy score and dose response curve of BYL719 in MCF7 parental
55 and resistant HD cells in combination with I3C treatment. Each dot is presented as mean \pm SD of
56 triplicated experiments. (C) 3-D plot of synergy score and dose response curve of combination
57 therapy of BKM120 and I3C in MDA-MB-468 cells. Each dot is presented as mean \pm SD of
58 duplicated experiments.

59

60 **Supplemental Figure 5. AMPK α 2 isoform was specifically activated by WWP1 inhibition**
61 **in the muscle tissue upon PI3K inhibition.**

62 (A) Normalized mRNA expression levels of AMPK α 1 and AMPK α 2 in multiple human normal
63 tissues. Data was obtained from the Human Protein Atlas database

64 (<https://www.proteinatlas.org/>). (B) and (C) Analysis of the expression profile of AMPK α

65 isoforms in mouse tissues **(B)** and human breast cancer cell lines **(C)**. Bar plots are shown as
66 mean \pm SD of triplicated experiments. **(D)** Assessment of the phosphorylation of AMPK α in
67 293T cells. Cells were transfected with wild-type and catalytically inactive (CA) MYC-WWP1,
68 and HA-AMPK α 2 upon treatment with 1.0 μ M BKM120 for 3 h and subjected to WB. **(E)**
69 Evaluation of AMPK expression in C2C12 cells upon BKM120 and I3C combination treatment.
70 Differentiated C2C12 cells were pretreated with I3C (150 μ M) for 3 days followed by BKM120
71 (2.0 μ M) treatment for 24 h. **(F)** Assessment of AMPK activity in MCF7 cells upon stable
72 expression of shWWP1. Cells were treated with 1.0 μ M of BYL719 for 24 h. **(G)** Intracellular
73 ADP/ATP ratio of C2C12 cells upon stable expression of shWWP1. Cells were treated with 1.0
74 μ M of BKM120 for 2h (n = 4, one-way ANOVA followed by Tukey-Kramer multiple
75 comparisons test). *p < 0.05, **p < 0.01.

76

77 **Supplemental Figure 6. Reduction of glucose uptake upon PI3K inhibitor treatment was**
78 **restored by WWP1 inhibition through the activation of AMPK α 2.**

79 **(A)** Relative expression levels of pAMPK in quadriceps muscle (representative image in Fig.
80 3G). Measured intensity of the bands in WB was normalized by total AMPK with Image J
81 software (n = 5, one-way ANOVA followed by Tukey-Kramer multiple comparisons test). **(B)**
82 Assessment of cell surface GLUT4 upon BKM120 treatment and *Wwp1* silencing in C2C12-
83 Myc-GLUT4-mCherry cells. Histograms show the representative distribution of Myc-tag-
84 GLUT4 intensity in indicated cells measured by flowcytometry. **(C)** Longitudinal measurement
85 of blood glucose levels upon BKM120 and AMPK inhibitor (Compound C) treatment.
86 Compound C (CC) or PBS were administrated intraperitoneally into *Wwp1*^{-/-} and *Wwp1*^{+/+} mice
87 30 min before peroral treatment of BKM120 (50 mg/kg). Data represent mean \pm SD of blood

88 glucose levels ($n = 6$ in each arm, two-tailed Student t test). **(D)** Glucose uptake in MDA-MB-
89 231 cells upon BKM120 treatment. Cells upon stable expression of WWP1 shRNA were treated
90 with BKM120 for 17h along with starvation. Each plot shows mean \pm SD of triplicated assay
91 (one-way ANOVA followed by Tukey-Kramer multiple comparisons test). * $p < 0.05$, ** $p <$
92 0.01 .

93

94 **Supplemental Figure 7. Combination therapy with I3C enhanced the efficacy of PI3K**
95 **inhibitor.**

96 **(A)** Soft agar colony formation assay with MDA-MB-231 cells treated with multiple PI3K
97 inhibitors. Cells with the expression of Scramble (shScr) or WWP1 shRNA (shWWP1) were
98 seeded in agarose gel and treated with indicated drugs for 28 days ($n = 3$ each). **(B)** and **(C)** Soft
99 agar colony formation assay of MDA-MB-231 parental **(B)** and resistant **(C)** cells. Each plot is
100 shown as mean \pm SD of triplicated assays. **(D)** Representative images of immunohistochemistry
101 staining with Ki-67 in tumor xenograft model. Scale bar represents 100 μm . Bar plot shows
102 mean percentage \pm SD of Ki-67 positive cells in three independent eye fields. **(E)** Activation of
103 caspase-3 in xenograft tumors. Dissected tumor derived from MDA-MB-231 resistant cells in
104 each treatment arm was subjected to WB. Relative expression levels of cleaved caspase-3 (CC3)
105 were plotted with mean value \pm SD (triplicated). * $p < 0.05$, ** $p < 0.01$. One-way ANOVA
106 followed by Tukey-Kramer multiple comparisons test was used in **A**, **B**, **C**, **D**, and **E**.

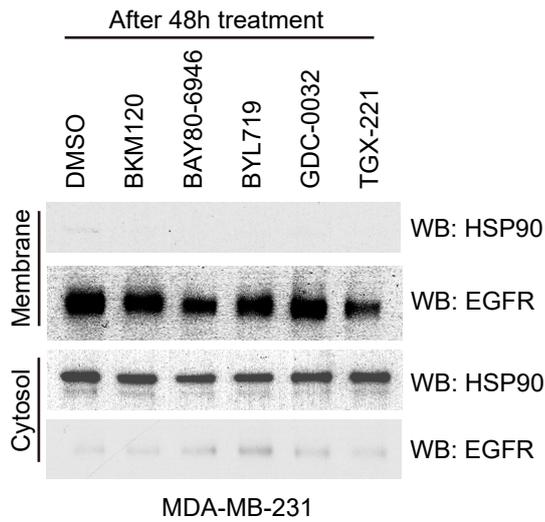

107

108 **Supplemental Figure 8. Combination therapy with I3C enhanced PI3K inhibitor efficacy**
109 **concomitantly mitigating drug induced hyperglycemia.**

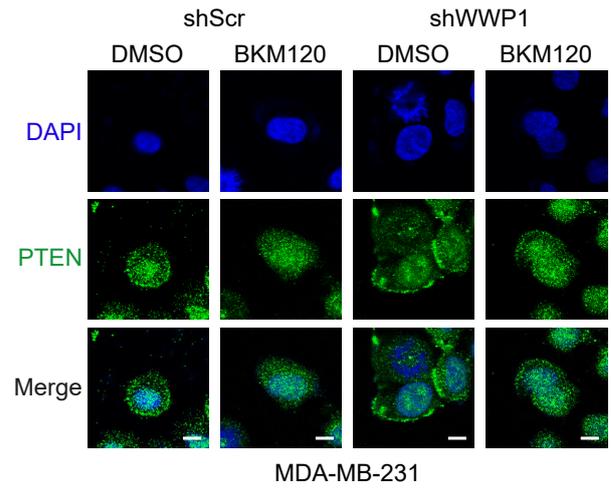

110 **(A)** and **(B)** Tumor xenograft assay was performed with subcutaneous implantation of MCF7
111 cells. Mice were treated orally with vehicle, BYL719 (20 mg/kg), I3C (100 mg/kg), or
112 combination of them 5 day a week from 7 days after implantation. Tumors were extracted at day
113 52 followed by weight measurement. Data are shown as mean \pm SD in weight. (n = 8 in BYL719
114 + I3C arm and n = 10 in the other arms). **(C)** and **(D)** Blood insulin measurement of mice bearing
115 MDA-MB-231 resistant **(C)** or MCF7 **(D)** xenografts upon indicated treatment (n = 5 per group).
116 **(E)** Blood insulin levels of mice bearing PDX TNBC tumors. Peripheral blood was obtained 3 h
117 after the treatment at the day of euthanasia (n = 7 in vehicle arm and n = 6 in the other arms). *p
118 < 0.05, **p < 0.01, and ***p < 0.001. One-way ANOVA followed by Tukey-Kramer multiple
119 comparisons test was used in **A**, **C**, **D**, and **E**.
