

S3 Fig. Extended data for Figure 3.

(A) The growth of yeast $\Delta Sccox11$ and *COX11* overexpressing strains in the presence or absence of paraquat (PQ). **(B)** The growth of *COX11* overexpressing yeast strains on respiratory YPE (ethanol media). **(C)** Test of respiratory competence of yeast single and double mutants. YPD, media with glucose; YPG, media with glycerol; YPEG, media with ethanol and glycerol. **(D)** The growth of $\Delta Sccyt1$ mutants in the presence or absence of PQ. (A-D) Serial dilutions of indicated yeast strains were spotted in the appropriate media and cultured for 48-72 h.
