

Supplementary Table 4. Selected hematological, serum chemistry, and urinalysis parameters at baseline (screening) and at the end of the study (Day 84) in cats treated with frunevetmab or placebo. Means and standard deviations (SD) are reported, as are the number of cases that were above ('High') or below ('Low') the reference range (provided in units used in the study). * n= 93(screening), n=85 (Day 84); for USG n=90 (screening), n=79 (Day 84) **n=182 (screening), n=165(Day 84); for USG n=175 (screening), n=149 (Day 84)
