

Figure S1. Relative miR-603 expression was detected by reverse transcription-quantitative PCR. The results revealed that miR-603 expression increased in FHCs co-transfected with miR-NC mimics and miR-603 mimics. However, miR-603 expression decreased in FHCs co-transfected with miR-NC inhibitor and miR-603 inhibitor. \*\*P<0.01 vs. miR-NC mimics/inhibitor. miR, microRNA; NC, negative control.
