

Prevalence odds ratio (OR) per 10-dBA increment in noise level

Difference in baseline cognitive score per 10-dBA increment in noise level

Adjusted for calendar time, baseline age, age at exam, sex, race, income, education, neighborhood SES, smoking, alcohol use, and air pollution (NO_x). Rate of change stratified by age at time of examination.
 dBA = A-weighted decibels; NO_x = oxides of nitrogen; SES = socioeconomic status; AD = Alzheimer's disease dementia; MCI = mild cognitive impairment
