

Supplementary information, Fig. S7

Supplementary information, Fig. S7. Spatial relationship between HSCs/MPPs and niche cells. **a** Boxplots showing the enrichment fold of niche cells in intra-spots and inter-spots. Hep, hepatoblast; SC, stromal cell; Mac, macrophage. **b** Boxplots showing the enrichment score of macrophages in intra-spots^{Stereo-seq}, inter-spots^{Stereo-seq} and Other-spots^{Stereo-seq}. **c** The spatial organization of HSCs/MPPs and niche cells in the pseudo-space inferred by CSOmap based on the scRNA-seq data. **d** Normalized connection numbers of interactions between HSCs/MPPs and niche cells. **e** The section view at z=0 in HSCs/MPPs and niche cells. **f** The distance of HSCs/MPPs and niche cells to the center of the pseudo-space. **g** Co-expression pattern of *Mdk* and *Sorl1* in FL section. **h** Spatial feature plots of *Mdk-Sorl1* enriched HSC/MPP expansion units. **i** Schematic diagram indicating the *Mdk-Sorl1* enriched HSC/MPP expansion units.
