

Supplementary information, Fig. S8

Supplementary information, Fig. S8. Macrophage depletion upon Clodronate-liposome treatment. **a** The proportion of macrophages (CD45⁺F4/80⁺ cells) in E14.5 FL after Clodronate-liposome and Control-liposome treatment. Clodronate-liposome, Clodronate-L; Control-liposome, Control-L, n > 3 biological replicates. **b** Flow cytometry analysis showing the proportions of CD45⁺F4/80⁺ cells in E14.5 FL after Clodronate-liposome and Control-liposome treatment. **c** The proportion of macrophages (CD45⁺CD68⁺ cells) in E14.5 FL after Clodronate-liposome and Control-liposome treatment, n > 3 biological replicates. **d** Flow cytometry analysis showing the proportions of CD68⁺ cells in E14.5 FL after Clodronate-liposome and Control-liposome treatment. The statistical results are presented as mean ± SEM. Student's t test: **, $P < 0.01$; ***, $P < 0.001$.
