

**Supplementary Table 1 Comparison between PCMDB and PlantscRNADB on number of marker genes, literature, and cell types.**

	Experimentally Validated		Identified by Bulk RNA-seq		Identified by scRNA-seq		Overlap between PCMDB and PlantscRNADB
	PlantscRNADB	PCMDB	PlantscRNADB	PCMDB	PlantscRNADB	PCMDB	
<b>Number of Marker Genes</b>							
<b>Arabidopsis</b>	353	1,718	249	4,004	14,717	17,022	12,750
<b>Rice</b>	72	623	26	3,690	5,362	17,003	5,306
<b>Maize</b>	84	442	0	11,516	5,817	7,015	NA(No GeneID)
<b>Soybean</b>	NA	79	NA	12,314	NA	0	NA(No GeneID)
<b>Tomato</b>	40	169	34	8,056	0	5,875	NA
<b>Tobacco</b>	NA	88	NA	1,045	NA	0	NA
<b>Number of Literatures</b>							
<b>Arabidopsis</b>	239	790	1	15	9	14	/
<b>Rice</b>	48	340	1	14	1	3	/
<b>Maize</b>	63	208	0	9	3	3	/
<b>Soybean</b>	NA	71	NA	7	NA	0	/
<b>Tomato</b>	27	149	2	11	0	1	/
<b>Tobacco</b>	NA	64	NA	2	NA	0	/
<b>Number of Cell Types</b>							
<b>Arabidopsis</b>	121	159	1	54	40	42	/
<b>Rice</b>	39	95	6	25	8	19	/
<b>Maize</b>	25	68	0	25	24	12	/
<b>Soybean</b>	NA	25	NA	14	NA	0	/
<b>Tomato</b>	25	69	8	27	0	9	/
<b>Tobacco</b>	NA	22	NA	6	NA	0	/

**Supplementary Table 2** The number of literatures for different source during process of literature.

	Round 1	Round 2	Round 3
<b>Number of Experimental Literatures</b>			
<b>Arabidopsis</b>	31,967	2,883	790
<b>Rice</b>	17,945	996	340
<b>Maize</b>	16,552	649	208
<b>Soybean</b>	11,593	336	71
<b>Tomato</b>	10,150	277	149
<b>Tobacco</b>	37,283	272	64
<b>Number of Bulk RNA-seq Literatures</b>			
<b>Arabidopsis</b>	11,011	47	15
<b>Rice</b>	3,169	17	14
<b>Maize</b>	1,593	34	9
<b>Soybean</b>	1,821	22	7
<b>Tomato</b>	609	22	11
<b>Tobacco</b>	1,727	8	2
<b>Number of scRNA-seq Literatures</b>			
<b>Arabidopsis</b>	28	14	14
<b>Rice</b>	6	3	3
<b>Maize</b>	3	3	3
<b>Soybean</b>	3	0	0
<b>Tomato</b>	2	1	1
<b>Tobacco</b>	3	0	0

Supplementary Figure 1 The number of marker genes for the top 20 cell types identified by bulk RNA-seq in each plant species.

Supplementary Figure 2 The number of marker genes for the top 20 cell types identified by scRNA-seq in each plant species.

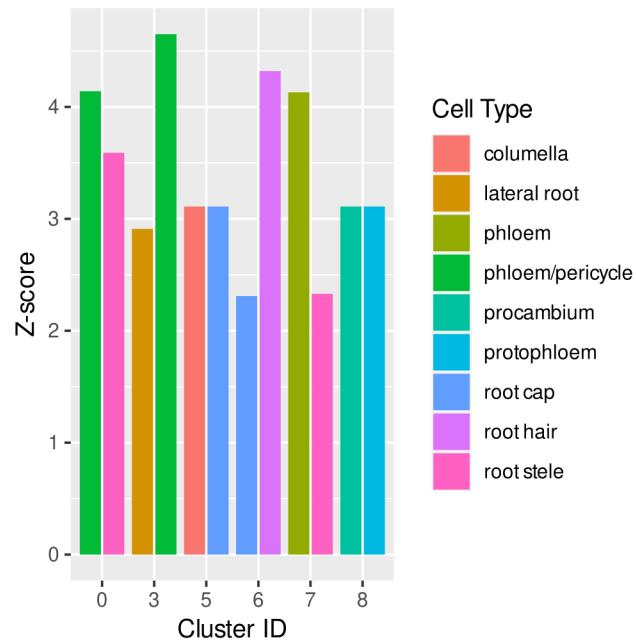

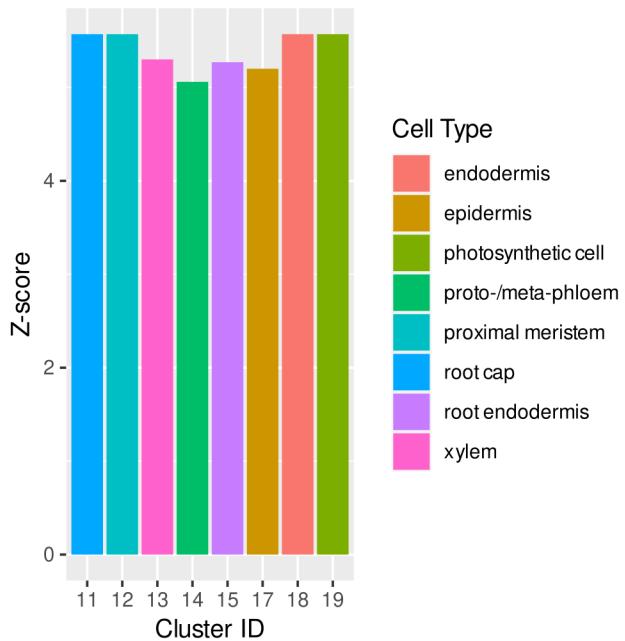

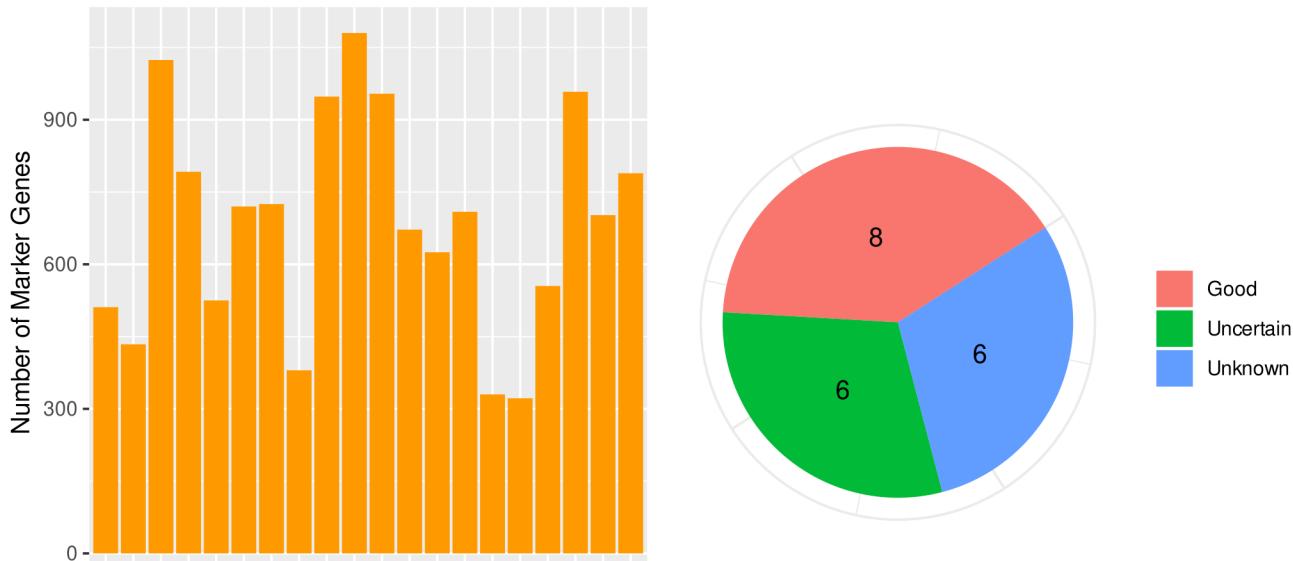

Supplementary Figure 3: The result of SCSA prediction for the scRNA-seq dataset of Zhang et al. (PMID:31004836) using marker genes from different sources.

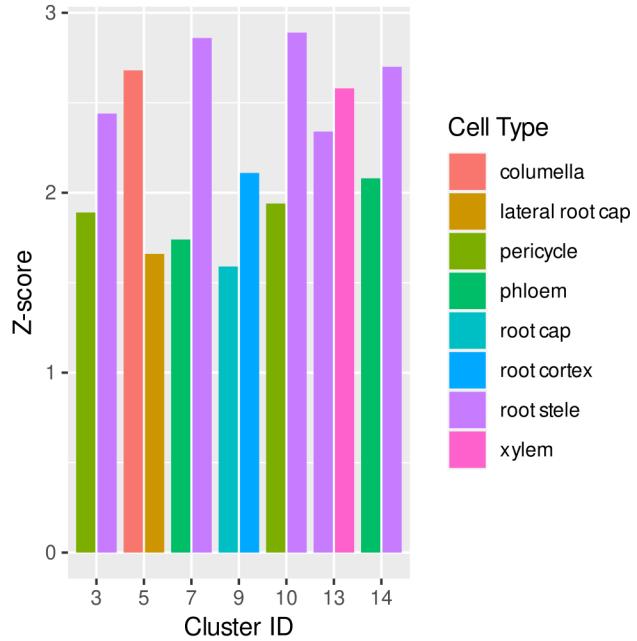

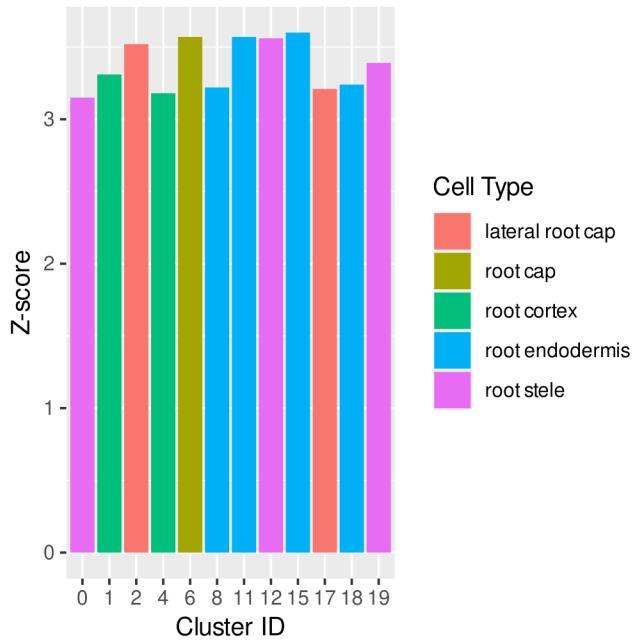

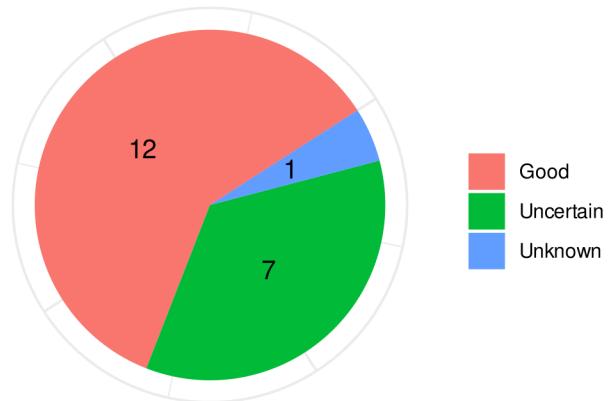

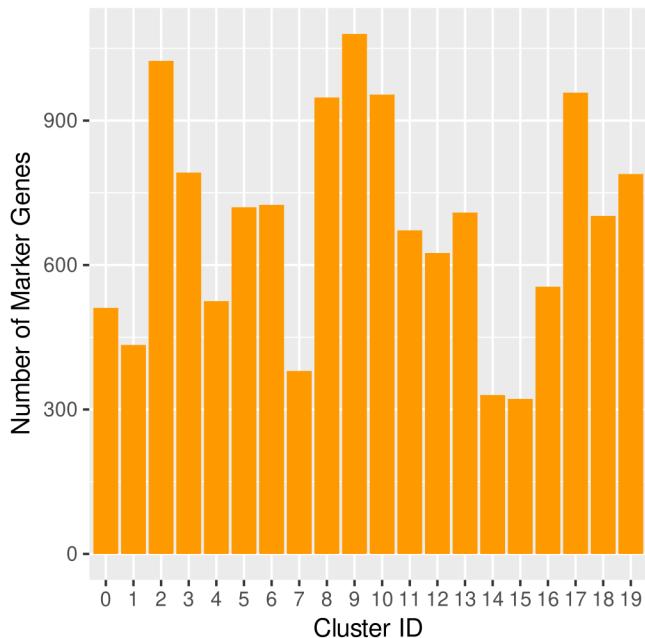

Left Top: The number of marker genes for each cluster of the input data. Right Top: The number of clusters classified into different types (Good, Uncertain, and Unknown) by SCSA. Left Bottom: Z-score of cluster label for clusters classified into the Good type. Right Bottom: Z-score of top 2 cluster labels for clusters classified into the Uncertain type.

- (A) The result of SCSA prediction using 103 known marker genes mentioned in Zhang et al.
- (B) The result of SCSA prediction using 923 experimental related root marker genes in PCMDB.
- (C) The result of SCSA prediction using 162 bulk RNA-seq related root marker genes in PCMDB.
- (D) The result of SCSA prediction using 11,654 scRNA-seq related root marker genes in PCMDB.
- (E) The result of SCSA prediction using all root marker genes in PCMDB.

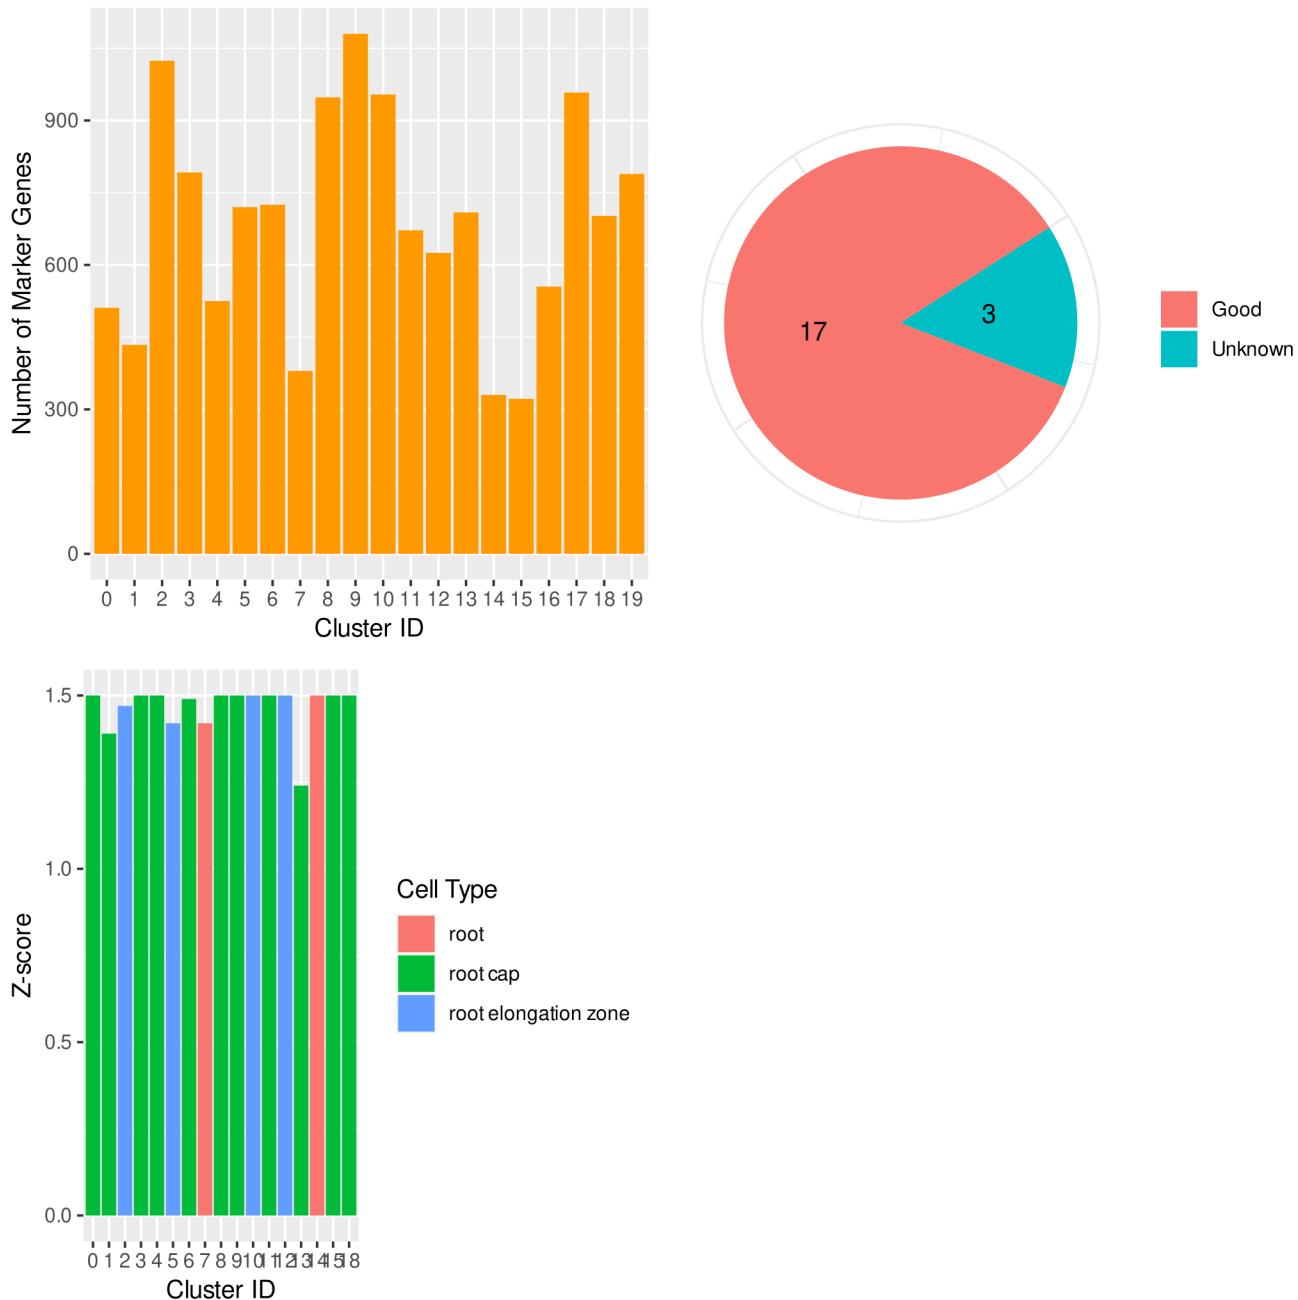

Supplementary Figure 3A. The result of SCSA prediction using 103 known marker genes mentioned in Zhang et al.
