

## Supplemental Material

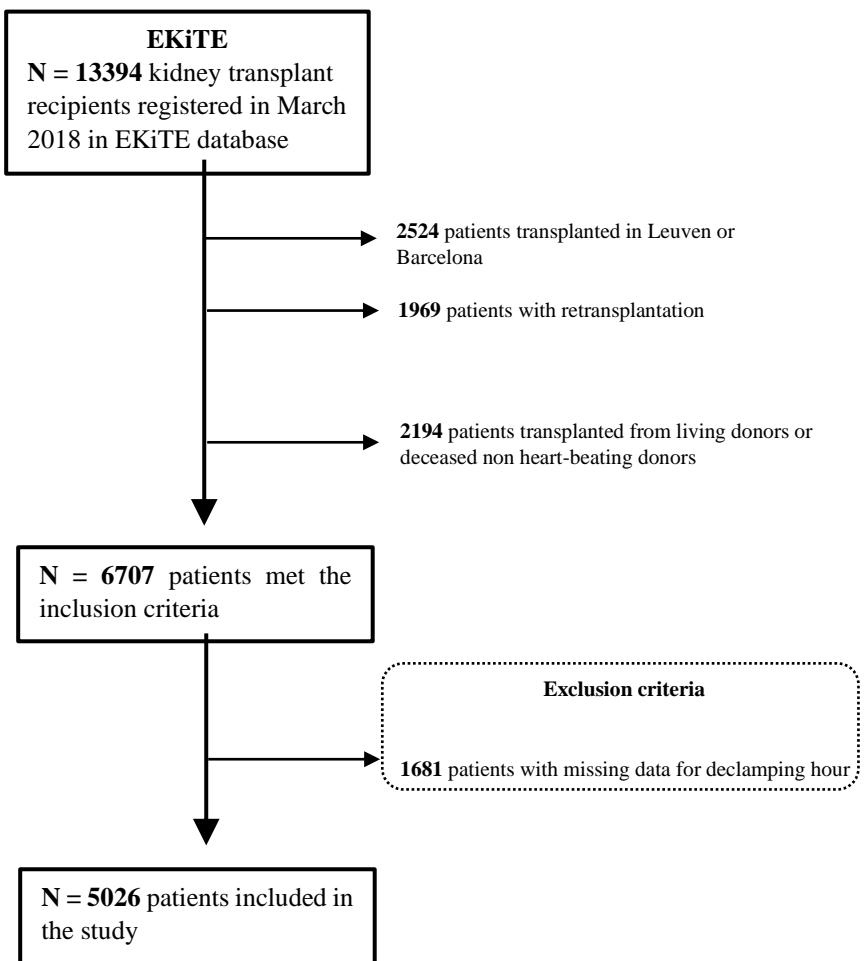

### FIGURES

1. Flow chart
2. **Supplemental Figure 1.** Incidence (percentage) of delayed graft function according to the clamping (A) declamping (B) time of the kidney transplant. Each cross corresponds to a 2-hour period.

### TABLES

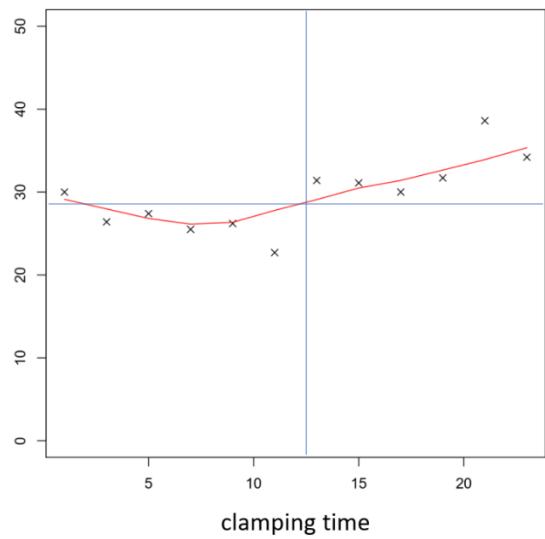

1. **Supplemental Table 1.** Multivariate logistic model regarding the risk of Delayed Graft Function (DGF) Declamping time categorized in 2 categories: 0-12 AM versus 0-12 PM.
2. **Supplemental Table 2.** Multivariate linear model studying the one-year renal function after transplantation. Clamping time categorized in 2 categories: 0-12 AM versus 0-12 PM.
3. **Supplemental Table 3.** Multivariate linear model studying the one-year renal function after transplantation. Declamping time categorized in 2 categories: 0-12 AM versus 0-12 PM.
4. **Supplemental Table 4.** Multivariable Cox model studying the risk of death or graft failure. Declamping time categorized in 2 categories: 0-12 AM versus 0-12 PM.
5. **Supplemental Table 5.** Multivariable Cox model studying the risk of graft failure. Declamping time categorized in 2 categories: 0-12 AM versus 0-12 PM.
6. **Supplemental Table 6.** Multivariable Cox model studying the risk of acute rejection. Clamping time categorized in 2 categories: 0-12 AM versus 0-12 PM.
7. **Supplemental Table 7.** Multivariable Cox model studying the risk of acute rejection. Declamping time categorized in 2 categories: 0-12 AM versus 0-12 PM.

## Flowchart

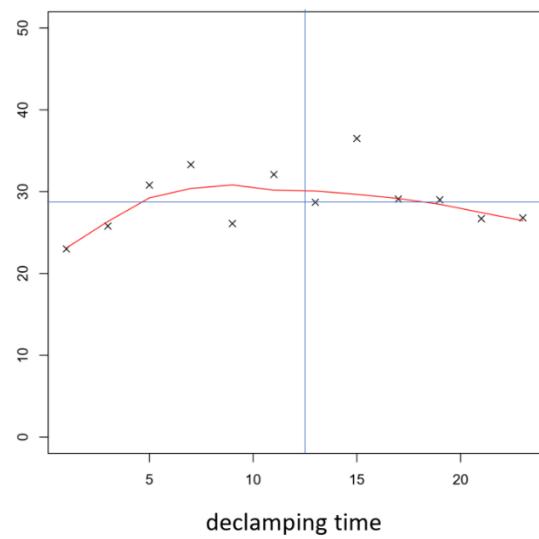

**Supplemental figure 1.** Incidence (percentage) of delayed graft function according to the clamping (A) declamping (B) time of the kidney transplant. Each cross corresponds to a 2-hour period.

A

B

**Supplemental Table 1**

MULTIVARIATE LOGISTIC MODEL (N = 2886) REGARDING THE RISK OF DELAYED GRAFT FUNCTION (DGF)  
AND ADJUSTED ON CENTER. DECLAMPING TIME CATEGORIZED IN 2 CATEGORIES: 0-12 AM (N=612)  
VERSUS 0-12 PM (N=2274).

	n (%)	OR [95% CI]	p-value
