

**Supplementary Table 8.** Anti-spike IgG levels in HD patients, treated or not with immunosuppressors (data presented in Figure 4).

	Age	n	Median [IQR]		
			t0	t1	t2
Immuno-suppression	42-63y	11	0.16 [0.13-0.25]	0.37 [0.19-0.59]	1.85 [1.27-2.17]
No immuno-suppression	42-69y	50	0.23 [0.15-0.34]	0.78 [0.57-1.21]	2.11 [1.94-2.26]
<i>p</i> -value* (treated vs controls)			0.1798	0.0127	0.0969

n, number of individuals with a given event; IQR, interquartile range; t0 – sera collected on day of 1<sup>st</sup> vaccine dose; t1 – sera collected 21 days post-1<sup>st</sup> vaccine dose; t2 – sera collected 42 days post-1<sup>st</sup> vaccine dose.

\*Wilcoxon rank sum test with BH method for *p*-value adjustment was used to compare Ig levels between patients treated or not with immunosuppressors.
