ONLINE RESOURCE 7

Full output from PHIM

This gives the results from all the runs of PHIM as well as an explanation of it.

This file gives the full output from the Main Analysis, the Pessimistic Analysis and the four Sensitivity Analyses described in the paper.

Introduction

This file provides the full computer output for all the simulations. There are six sets of detailed output, the main analysis (MA), the pessimistic analysis (PA) and then four sets of sensitivity analyses. For the MA and PA there are two runs, one for males then one for females. The four sensitivity analyses start with the values for the MA and then vary one factor. In sensitivity analysis 1 the effective dose (F) is varied from the MA value of 0.05, using values 0.4 (as in the PA), 0, 0.1, 0.2 or 0.3. This produces 10 runs, with the results for females following those for males. In sensitivity analysis 2 the switching rates (X) are varied from the MA value of 5% to 0.01%, 2.5%, 10% (as in the PA), 7.5% or 15% giving 10 runs. In sensitivity analysis 3 the MA quitting rates (Q) are multiplied by 0.5 (as in the PA), 0.75, 1.25 or 1.5 giving 8 runs. In sensitivity analysis 4 the MA initialisation rates (I) are multiplied by 0.5, 0.75, 1.25 or 1.5 (as in the PA).

For each set of output, the first page (see pages numbered 8, 123, 214, 667, 1120 and 1483 for the six sets of output) starts by giving details of when the simulations were run, the person who ran them, the version of the PHIM software that was used, and the input and output files used, followed by a table of contents. Within each set, each run starts with a page giving the control file details, which is then followed by the transition probabilities, the tobacco history output generated from the P-component, and the results for the E-component, firstly for drop in deaths and then for years of life saved. Full details of the NULL smoking prevalences are only given for the MA results, for which each run has 47 pages with a final 20 pages at the end giving details of years of life saved. For all other analyses each run has 35 pages. For the MA, the total output consists of 115 pages.

Further explanation of the output is given below, followed by the full computer output. Before that, it should be noted that the terminology on the output varies somewhat from that in the main paper. Thus:

<u>Terminology in paper</u>	<u>Terminology on output</u>
Null Scenario	Reference Scenario or NULL Scenario
Alternative Scenario	Test Scenario or MRTP Scenario
TP	TTP
CC	Product 1, PR1 or CC
ECig	Product 2, PR2 or Ecig
Dual	Product 4, PR4 or Dual

Below we use the terminology on the output.

Control File Details

When running the software, there are 52 variable parameters, not all relevant to all runs. Explanation of some parameters which may not be self-evident is given below.

- 12-13 Age limits for risk estimation. These are the limits for the baseline population. As individuals exceed 79 years of age they drop out of the analysis. The results concerning deaths or years of life lost only relate to those aged 30-79 years.
- 14-17 Effective doses in the Reference scenario. Only product 1 is relevant here. Current CC smokers have a dose of 1 unit.

- 18-21 Effective doses in the Test scenario. Current CC smokers have a dose of 1 unit, current ECig users have a dose of F units, and dual users have the dose “FROMF2” which implies the average of the doses for products 1 and 2, i.e. $(1+F)/2$.
- 23 Number of MC simulations. MC stands for Monte Carlo. Here we only have one simulation for each sex.
- 25-32 Files used. Parameter 26 is not used.
- 33-37 Assumption sets used. See section 3 below. Parameter 37 is not used.
- 38 Output choice file. The file determining which outputs are to be produced.
- 39-46 Further details of output. The user has the option to include or not include various parts of the output.
- 47-48 Run number for P-component and Results file for E-component. This is only relevant if results are only to be output for one of the components, so is not relevant here.
- 49 Components required. PE implies that both P-component and E-component results are to be produced.
- 50 Results folder for P to be used in E-component. This is not relevant here.
- 51 Fixed age of starting product use. This is the assumed age of starting for individuals whose product use history starts as a current or former user.
- 52 Output absolute risk file? This is an option for additional output, which is not used here.

Transition probabilities (TPs)

For the MA, pages 10 and 11 show the monthly TPs for the NULL Scenario and pages 13 to 16 show the monthly TTPs for the Alternative (ECig) Scenario. On pages 12 and 17 the values of special factors are shown. These factors are applied in special cases, such as Factor 1a which doubles the probability of the transition from current ECigs (PR2) to current cigarette smokers (PR1) when the individual has smoked current cigarettes in the past. The same factors have been applied through the analysis, but have only been shown for the MA.

For the NULL Scenario there are three TPs (initiation, cessation and re-initiation), while for the ECig Scenario there are 15 TPs, three relating each to initiation, cessation and re-initiation and six to switching. The TPs may vary by grouped age and by time period since baseline. Note that, in order to match the Levy results, TPs relating to re-initiation and dual usage have been set to zero in these simulations.

Tobacco history output from the P-Component

For the MA, the tobacco history output from the P-Component is then shown by time of follow-up from baseline in 1990 by five year period (0, 5, 10 ... 50), and by age group (18-19, 20-24, 25-29 ... 75-79, and for all ages combined).

The output on pages 18 to 29 for the first run for the NULL scenario gives results for three smoking groups: Never Any, CC (i.e. current conventional cigarettes) and former (i.e. former conventional cigarettes). The output on pages 30 to 45 for the first run for the ECig Scenario gives results for five smoking groups: never any, three current use groups (cigarettes [CC], ECig, Dual) and former (i.e. not a current user, but formerly used one or both products).

For each group, the output shows the total numbers and percentages in each group. For current CC smokers it also shows the number and percentage who have previously quit, while for former smokers it also shows the mean years quit, and the number and percentage of short term quitters.

Note that for scenarios other than the MA, when showing the prevalences for the NULL scenario only the results for the final year are shown. This is because the prevalence for the NULL scenario varies only by sex, but not by set or sensitivity analysis.

Results for drops in death from the E-Component

The results for drops in death from the E-Component are shown for all four diseases combined and then for the four diseases separately, with estimates unadjusted for differential mortality in the ECig Scenario shown on the first five pages and adjusted estimates shown on the next five pages. Each of the 10 pages for a given run (pages 46-55 and 93-102 for females in the MA) is laid out similarly, with results for all years combined shown first and then results for individual years. The results relate to the age groups 30-79 combined. The output shows the total number of deaths from the disease (or four diseases combined), followed by the number attributed to tobacco in the NULL and ECig Scenarios. The output also shows the drop in deaths associated with the ECig Scenario (compared to the NULL Scenario), expressed as a number, and as a percentage, both of the total deaths and of the attributable deaths in the NULL Scenario. Finally, the output shows the total death rate from the disease (or four diseases combined), the rate of attributable deaths in each scenario and the drop in rates. Rates are expressed per million of population.

Results for years of life lost from the E-Component

The final 20 pages (pages 103 to 122 for the MA) provide the full computer output for years of life lost for males and females. Each page gives data on the estimated cumulative years of life lost in the Reference (Null) Scenario and in the particular ECig Scenario of interest, as well as the difference, the cumulative years of life saved. The results are shown for the four diseases separately and combined, separately for males and females. Tables 1, 3 and 5 relate to results unadjusted for deaths in the Test Scenario, while Tables 2, 4 and 6 give the corresponding adjusted results. Tables 1 and 2 give overall results for the whole follow-up period and for ages 30-79 combined. Tables 3 and 4 give results by year of follow-up for ages 30-79 years combined. Tables 5 and 6 give results for the whole follow-up period by 5 year age group.

These 20 pages of output are repeated for every separate pair of runs (male and female). Thus for sensitivity analyses 1 and 2 there are five sets for results taking up 100 pages, while for sensitivity analyses 3 and 4 there are four sets of results taking up 80 pages of output.

Results for PHIM for Run 1 (Main_Analysis.RTF)

Main Results for E-Component for Run: 1, Simulation: 1, COD: STROKE, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	STROKE
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.05 Dual:0.525
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

Results for PHIM for Run 2 (Main_Analysis.RTF)

Main Results for E-Component for Run: 2, Simulation: 1, COD: LUNG CANCER

Variable Parameter	Value
1. Country	US (United States)
2. Sex	F (Females)
3. Year of start of process	1990
4. Cause of Death	LUNG CANCER
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.05 Dual:0.525
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population unadjusted for deaths in Ecig scenario,

System Date and Time: 20210220T083445
User: JohnS
SAS Version: 9.4
Project: Population Health Impact Model 7.3

The System is running in Test Mode

Maximum Upper Age for P Component = 79
Upper Age for ELL Calculations = 75
Report in E-component: Social Classes A and B combined
Description: Pessimistic Analysis for VeneBio on US
Assumption Files:

Results for PHIM for Run 1 (Pessimistic_Analysis.RTF)

Main Results for E-Component for Run: 1, Simulation: 1, COD: LUNG CANCER

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	LUNG CANCER
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.4 Dual:0.7
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population unadjusted for deaths in Ecig scenario,

Results for PHIM for Run 1 (Pessimistic_Analysis.RTF)

Main Results for E-Component for Run: 1, Simulation: 1, COD: STROKE, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	STROKE
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.4 Dual:0.7
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

Results for PHIM for Run 2 (Pessimistic_Analysis.RTF)

Main Results for E-Component for Run: 2, Simulation: 1, COD: LUNG CANCER, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	F (Females)
3. Year of start of process	1990
4. Cause of Death	LUNG CANCER
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.4 Dual:0.7
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

19. The effective dose for Product 2 (F2) - Test	0.4
20. The effective dose for Product 3 (F3) - Test	-
21. The effective dose for Product 4 (F4) - Test	FROMF2
22. Number in population to be simulated	100000
23. Number of MC simulations	1
24. The random number seed for the first simulation	15975263
25. Source for the population file (POP)	UN4
26. Source for the socioeconomic prevalence file (SEP)	-
27. Source for the current smoking prevalence file (CSP)	ISS3
28. Source for the former smoking prevalence file (FSP)	ISS3
29. Source for the quit-time distribution file (QTD)	NHIS2006
30. Source for the death file (MORT)	APR-20
31. Source for the relative risk file (RR)	PNLEST
32. Source for the half-life file (H)	PNLEST
33. Assumption Set for TTP Factor Reference	F1
34. Assumption Set for TTP Factor Test	F1
35. Assumption Set for TTP Reference	ISS3
36. Assumption Set for TTP Test	ISS3
37. Assumption Set for TP for socioeconomic group	-
38. Source for Output Choice file (OUTC)	BASIC
39. Output for DTP P1	N
40. Output for DTP P2	N
41. Output for Main P Component	Y
42. Output for DTP E1	N
43. Output for DTP E2	N
44. Output for DTP E3	N
45. Output for Main E Component	Y
46. Output file name	Sensitivity_Analysis_1
47. Run number for P-Component	-
48. Results file for E-Component	-
49. Components required	PE
50. Results folder for P to be used in E-Component	-
51. Fixed age of starting product use	16
52. Output absolute risk file?	N

Results for PHIM for Run 1 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 1, Simulation: 1, COD: COPD, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	COPD
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.4 Dual:0.7
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

Results for PHIM for Run 3 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 3, Simulation: 1, COD: STROKE

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	STROKE
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0 Dual:0.5
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population unadjusted for deaths in Ecig scenario,

Results for PHIM for Run 3 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 3, Simulation: 1, COD: STROKE, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	STROKE
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0 Dual:0.5
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

Results for PHIM for Run 5 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 5, Simulation: 1, COD: IHD

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	IHD
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.1 Dual:0.55
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population unadjusted for deaths in Ecig scenario,

Results for PHIM for Run 5 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 5, Simulation: 1, COD: IHD, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	IHD
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.1 Dual:0.55
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

Results for PHIM for Run 6 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 6, Simulation: 1, COD: Four Diseases Combined, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	F (Females)
3. Year of start of process	1990
4. Cause of Death	Four Diseases Combined
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.1 Dual:0.55
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

Results for PHIM for Run 7 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 7, Simulation: 1, COD: LUNG CANCER

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	LUNG CANCER
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.2 Dual:0.6
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population unadjusted for deaths in Ecig scenario,

Results for PHIM for Run 9 (Sensitivity_Analysis_1.RTF)

TTP values for Run: 9, Scenario: Ecig

Table with 2 columns: Variable Parameter and Value. Parameters include Country (US), Sex (Males), Assumption Set (ISS3), and Note (Period is in Months).

Main data table with columns: Age, Period, Initiation (Never CC, Never Ecig, Never Dual), Cessation (CC Former, Ecig Former, Dual Former), and Re-initiation (Former CC, Former Ecig, Former Dual). Rows list age groups and periods with corresponding numerical values.

Results for PHIM for Run 9 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 9, Simulation: 1, COD: Four Diseases Combined, Adjusted

Variable Parameter	Value
1. Country	US (United States)
2. Sex	M (Males)
3. Year of start of process	1990
4. Cause of Death	Four Diseases Combined
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.3 Dual:0.65
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population and Number deaths adjusted for Ecig scenario,

Results for PHIM for Run 10 (Sensitivity_Analysis_1.RTF)

Main Results for E-Component for Run: 10, Simulation: 1, COD: STROKE

Variable Parameter	Value
1. Country	US (United States)
2. Sex	F (Females)
3. Year of start of process	1990
4. Cause of Death	STROKE
5. Effective Dose NULL	CC:1
6. Effective Dose Ecig	CC:1 Ecig:0.3 Dual:0.65
Note:	Death rates are per million population

Results for Age Groups Combined and Years combined, Population unadjusted for deaths in Ecig scenario,
