Real study data characteristics and specification of predictors.

Table 1 General study population characteristics. For age we report the median and standard deviation. For the other variables, we report the number and the percentage of the whole population.

Table 2 Predictors used in each predictor set. \mathbb{R} refers to continuous predictors, and $\{0, 1\}$ refers to binary predictors. PCM refers to the pharyngeal constrictor muscle. Organs at risk were delineated following consensus guidelines [1]. Dose is expressed in Gray (Gy).
