

Supplemental table S1. Grading scheme for foveal hypoplasia according to Thomas *et al.*²⁰

Grade of foveal hypoplasia	Optical coherence tomography findings
Grade 0	Normal foveal structure
Grade 1	No extrusion of plexiform layers, a foveal pit is still present, other structures are normal
Grade 2	Absence of a foveal pit, underlying foveal structures are normal
Grade 3	No foveal pit, no lengthening of the outer segments, normal outer nuclear layer
Grade 4	No foveal pit, no lengthening of the outer segments, no widening of the outer nuclear layer
