

Supplemental Figure. Scoring method used for interpretation of planktonic phage susceptibility. Unaffected bacterial growth (NA) and zones of growth attenuation (ZGA) were recorded as no activity, while phage treatment that yielded observable activity was recorded as exhibiting plaques (P) or a zone of clearance (ZC).

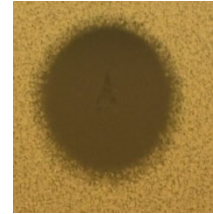

NA

ZGA

P

ZC

Supplemental Table. Planktonic phage susceptibility across all isolates tested. Cells corresponding to susceptibility are in blue and those corresponding to non-susceptibility are in yellow.
