**eTable 2:** Mental disorders included in GBD 2019

Cause	Definition	Corresponding DSM-IV-TR and ICD-10 codes
Major depressive disorder	Involves the presence of at least one major depressive episode, which is the experience of either depressed mood or loss of interest/pleasure, for most of every day, for at least two weeks.	DSM-IV-TR: 296.21–24, 296.31–34 ICD-10: F32.0–9, F33.0–9
Dysthymia	Involves the experience of chronically depressed mood for most of the day, more days than not, for at least two years (or at least one year in children and adolescents).	DSM-IV-TR: 300.4 ICD-10: F34.1
Anxiety disorders	Involves experiences of intense fear and distress, typically in combination with other physiological symptoms. Anxiety disorders were modelled as a single cause for “any” anxiety disorder to avoid the double-counting of individuals meeting criteria for more than one anxiety disorder. Epidemiological estimates reporting an outcome for “any” or “total” anxiety disorders were included if they reported on at least three anxiety disorders.	DSM-IV-TR: 300.0–300.3, 208.3, 309.21, 309.81 ICD-10: F40–42, F43.0, F43.1, F93.0–93.2, F93.8.
Schizophrenia	Involves the experience of positive symptoms (e.g., delusions, hallucinations, thought disorder) and negative symptoms (e.g., flat affect, loss of interest, and emotional withdrawal).	DSM-IV-TR: 295.10–295.30, 295.60, 295.90 ICD 10: F20
Bipolar disorder	Bipolar I is characterised by at least one manic episode, which can also alternate with a major depressive episode. Bipolar II is characterised by hypomanic episodes alternating with major depressive episodes. Cyclothymia is characterised by subsyndromal hypomanic and major depressive episode. Bipolar disorder not otherwise specified is characterised by clinically significant symptoms of bipolar disorder which do not meet criteria for the other diagnoses. We estimated burden for the entire spectrum of bipolar disorder simultaneously, rather than individually for each subtype of the disorder. At a minimum, epidemiological studies needed to report on bipolar I and bipolar II.	DSM-IV-TR: 296.0–296.7, 296.89, 301.13 ICD-10: F30.0–F30.9, F31.0–F31.6, F31.8–F31.9, F34.0
Anorexia nervosa	Characterised by refusal to maintain body weight at or above a minimally normal weight for age and height, intense fear of gaining weight, and disturbance in the way in which one’s body weight or shape is experienced.	DSM-IV-TR: 307.1 ICD-10: F50.0–50.1
Bulimia nervosa	Characterised by recurrent episodes of binge eating and inappropriate compensatory behaviour to prevent weight gain. These must occur, on average, at least twice a week for three months.	DSM-IV-TR: 307.51 ICD-10: F50.2
Conduct disorder	Occurs in those under 18 years of age and is characterised by a pattern of antisocial behaviour that violates the basic rights of others or major age-appropriate societal norms.	DSM-IV-TR: 312.81–312.89 ICD-10: F91
Attention-deficit/hyperactivity disorder	Characterised by persistent inattention and/or hyperactivity-impulsivity. Diagnosis requires six or more symptoms of inattention or hyperactivity-impulsivity to have persisted for at least six months, in two or more settings; with at least some impairing symptoms being present prior to 7 years of age.	DSM-IV-TR: 314.0, 314.01 ICD-10: F90
Autism Spectrum Disorder	Characterised by pervasive impairment in several areas of development, including social interaction and communication skills, along with restricted and repetitive patterns of behaviours and/or interests. Symptoms must be present in the early developmental period, cause clinically significant impairment, and not be better explained by intellectual impairment or global developmental delay.	DSM-IV-TR: 299.00, 299.80, 299.8, 299.8, 299.10 ICD-10: F84.0, F84.1, F84.2, F84.3, F84.4, F84.5, F84.8, F84.9
Other mental disorders	A residual cause within GBD which incorporates disability from an aggregate group of personality disorders. Personality disorders are characterised by pervasive, inflexible and maladaptive patterns of behaviour and inner experience which are markedly different from what is considered to be acceptable in the individual’s culture.	DSM-IV-TR: 300.3, 301.0; 301.2, 301.22, 301.5–301.9 ICD-10: F60
Idiopathic developmental intellectual disability	Idiopathic developmental intellectual disability modelled as part of the intellectual disability impairment envelop in GBD 2019. Idiopathic developmental intellectual disability arises from any unknown source after the prevalence of all other sources of Intellectual Disability is accounted for.	Involves borderline (IQ Score 70–85), mild (IQ score 50 to 69), moderate (IQ Score 35–49), severe (IQ score 20–34), and profound (IQ score 0–19) idiopathic intellectual disability.

Note: DSM-IV-TR: Diagnostic and Statistical Manual of Mental Disorders Fourth Edition, Text Revision; ICD-10: International Classification of Diseases and Related Health Problems 10th Revision.

Note: IDII = idiopathic developmental intellectual disability. Severity proportions for other mental disorders used the severity distributions from NESARC and the 1997 Australian National Survey of Mental Health and Wellbeing. <sup>a</sup>Equivalent to the disability weight estimated for mild major depressive disorder. <sup>b</sup>Equivalent to the disability weight estimated for moderate major depressive disorder. ADHD=attention-deficit/hyperactivity disorder. <sup>c</sup>A meta-analysis of severity levels of the ID envelope is conducted with data on proportion of those with IQ<70 who have an IQ from 50-69, and then for those with IQ <50 whose IQ is <20, 20-34 and 35-49. For IIDI, this is the subtraction of all secondary causes of ID, each with their own source of severity levels.

Note: This table shows YLD and DALY rankings for each mental disorder. Mental disorders are ranked out of all Level 3 causes within the GBD study. Disorders are ordered from highest to lowest ranking for the overall age group (ie, all ages). Each colour represents a different mental disorder. Cells marked 'N/A' (in grey) show disorders for which burden was not estimated within this age group. ID=idopathic developmental. ADHD=attention-deficit/hyperactivity disorder. DALYs=disability-adjusted life-years. YLDs=years lived with disability.
