All values are Pearson's correlation coefficients. The figures in the upper row correspond to the outcome name with the same figure presented in the left most column. Mini-BESTest = the Mini-Balance Evaluation Systems Test, Frändin-Grimby = the Frändin-Grimby scale, MDS-UPDRS = Movement Disorders Society - Unified Parkinson's Disease Rating Scale, MoCA = the Montreal Cognitive Assessment score ABC = the Activities-specific Balance Confidence Scale, proBDNF = precursor BDNF, mBDNF = mature BDNF, PDQ-39 = the Parkinson's Disease Questionnaire-39, EQ5D- VAS = the EuroQol 5 dimensions visual analogue scale, HADS = the Hospital Anxiety and Depression scale.

Supplementary Table 2. Credibility assessments and expectations of the two interventions.

	HiBalance m (sd)	Active control m (sd)	t-value	p-value	adjusted p-value
How successful symptom alleviation	6.6 (1.4)	5.8 (1.1)	-3.1	0.0026	0.0070
Recommend to a friend	7.6 (1.2)	6.5 (1.3)	-3.9	0.00021	0.0021
How much better (%)	53.3 (23)	55.1 (20)	0.4	0.69	0.69
Challenging tasks	5.5 (1)	5 (1.6)	-1.6	0.11	0.14
Feels valuable to me	7.5 (1.2)	6.6 (1.6)	-3	0.0035	0.0070
Enhance my memory	5.3 (1.9)	5.9 (1.4)	1.7	0.094	0.14
Get to know my group members	5.9 (1.6)	6.3 (1.3)	1.2	0.22	0.25
Enhance my dual task ability	6 (1.4)	5.3 (1.7)	-2	0.046	0.077
Benefit	7.5 (1.2)	6.7 (1.3)	-3.1	0.0027	0.0070
Motivation	8.1 (1)	7.4 (1.2)	-3	0.0035	0.0070

Questionnaire answered at week 3 to 4 into the interventions. Range 1-9 for all questions but “How much better” where percentage was used. The questionnaire was inspired by Borkovec and Nau.¹⁵ P-values were adjusted using the false discovery rate with alpha = 0.05.

Supplementary Table 3. Blinding of the assessors at the post intervention assessments.

	Knew before n (%)	Guessed before n (%)	Correct guess before n (%)	No guess n (%)	Guessed after n (%)	Not reported n (%)
Mini-BESTest	5 (6.8)	1 (1.4)	1 (1.4)	44 (59.5)	9 (12.2)	15 (20.3)
MDS-UPDRS	3 (4.1)	0 (0)	0 (0)	49 (66.2)	2 (2.7)	15 (20.3)
MRI	3 (4.6)	4 (6.2)	1 (1.5)	24 (36.9)	32 (49.2)	12 (18.5)
Speech, cognition	6 (9.2)	9 (13.8)	8 (12.3)	43 (66.2)	9 (13.8)	6 (9.2)
All blinding scores were reported at the end of the assessment. Knew before = the assessor knew group allocation before the post assessment started, Guessed before = the assessor guessed group allocation based in information obtained before the post assessment started, Correct guess before = the assessor was right in the guessed group allocation based on information obtained before the post assessment started, No guess = the assessor had no guess on group allocation either before the start or at the end of the post assessment, Guessed after = the assessor obtained a guess on group allocation at the end of the post assessment, Not reported = missing blinding score. Mini-BESTest = the Mini-Balance Evaluation Systems Test, MDS-UPDRS = Movement Disorders Society - Unified Parkinson's Disease Rating Scale, MRI = magnetic resonance imaging.						

Supplementary Table 4. Medication changes over the course of the intervention.

	HiBalance group (n = 40)	Active control group (n = 35)	t-value	p-value
Number of participants who increased their medication during the intervention	5	6		
Increase mg, m (sd)	89.6 (23.3)	105.7 (35.4)	0.4	0.39
Number of participants who decreased their medication during the intervention	1	1		
Decrease mg (m)	-93.0	-49.5		
mg = milligram, m = mean, sd = standard deviation.				

Supplementary Table 5. Estimates of the MLM analyses based on the imputed data (by intention to treat).

The column reg. defines the type of multilevel model (mlm) used for the outcome; lin. = linear, log lin. = linear mlm on logged values, binom. = logistic, poiss. = poisson, beta = mlm based on beta regression.

Mini-BESTest = the Mini-Balance Evaluation Systems Test, Frändin-Grimby = the Frändin-Grimby scale, MDS-UPDRS = Movement Disorders Society - Unified Parkinson's Disease Rating Scale, ABC = the Activities-specific Balance Confidence Scale, mBDNF = mature BDNF, PDQ-39 = the Parkinson's Disease Questionnaire-39, EQ5D- VAS = the EuroQol 5 dimensions visual analogue scale, HADS = the Hospital Anxiety and Depression scale, proBDNF = precursor BDNF, ratioBDNF = proBDNF/mBDNF.

Supplementary Figure 1: The f-values map of the striatum from the time by group interaction analysis. A more yellow colour indicates a higher f-value, range: 0 (deepest red) to 8.9 (brightest yellow). Contrast: sequence trial blocks/random trial blocks. An interactive whole brain f-values map from the time by group interaction analysis can be found here: <https://neurovault.org/collections/DORLUDYE/>

Supplementary Table 6. Difference score correlations within the groups between the behavioural outcomes and the fMRI data and mBDNF.

		Mini-BESTest			Gait speed			Executive function

The column reg. defines the type of multilevel model (mlm) used for the outcome; lin. = linear, log lin. = linear mlm on logged values, binom. = logistic, poiss. = poisson, beta = mlm based on beta regression. Mini-BESTest = the Mini-Balance Evaluation Systems Test, Frändin-Grimby = the Frändin-Grimby scale, MDS-UPDRS = Movement Disorders Society - Unified Parkinson's Disease Rating Scale, ABC = the Activities-specific Balance Confidence Scale, mBDNF = mature BDNF, PDQ-39 = the Parkinson's Disease Questionnaire-39, EQ5D- VAS = the EuroQol 5 dimensions visual analogue scale, HADS = the Hospital Anxiety and Depression scale, proBDNF = precursor BDNF, ratioBDNF = proBDNF/mBDNF.
