^aLog₂FC, Log₂ fold change; Adj. *P*_{value}, adjusted *P*_{value}; ND, not determined; NS, not significant.

^b CpxR regulon genes significantly upregulated at the protein level in *E. coli* exposed to colistin and CSA13.

^c Genes involved in colanic acid (GO:0009242) and lipopolysaccharide (LPS) (GO:0009103) biosynthetic processes and significantly upregulated at the protein level in *E. coli* exposed to colistin.

^d PhoB regulon genes significantly upregulated at the protein level in *E. coli* exposed to CSA13.

^e Genes involved in the heat response (GO:0009408) and significantly upregulated at the protein level in *E. coli* exposed to CSA13.
