Immune populations were defined as following, after gating for live singlets(24): CD4 and CD8 T naïve, effector and memory populations were identified based on CD45RA vs CCR7 expression, Tregs were identified based on FoxP3 expression. B cells were identified based on CD19 expression and further distinguished in memory vs naïve vs plasmablast based on expression of CD38 vs CD27. NK cells were identified based on CD56 expression and further subdivided based on CD56 vs CD16 expression. Monocytes were identified based on expression of CD14 and HLA-DR and further subdivided in classical, non-classical and intermediate based on the expression of CD14 vs CD16. Dendritic cells were defined as CD14 and CD16 negative monocytes and further distinguish between myeloid and plasmacytoid based on expression of CD11c vs CD123.
