

## 1. Survey validation

items	Numbers of questions in each item	Cronbach's Alpha	Cronbach's Alpha Based on Standardized Items
Domain II	7	0.811	0.813
Domain III	8	0.728	0.731
Total items	15	0.819	0.818

### 1.1.Domain II: the impact of COVID-19 on the environment

Questions	Mean	SD	alpha
<b>Q7</b>	3.333	0.992	0.787
<b>Q8</b>	3.346	1.024	0.789
<b>Q9</b>	3.125	1.042	0.785
<b>Q10</b>	3.466	1.235	0.773
<b>Q11</b>	3.803	1.03	0.806
<b>Q12</b>	3.264	1.376	0.778
<b>Q13</b>	2.856	1.421	0.778
<b>Reliability alpha</b>	0.811		
<b>Standardized alpha</b>	0.813		

### 1.2.Domain III: the impact of COVID-19 on pollution increase

Questions	Mean	SD	alpha
<b>Q14</b>	3.744	1.102	0.728
<b>Q15</b>	3.193	0.953	0.692
<b>Q16</b>	3.058	1.222	0.68
<b>Q17</b>	3.006	0.993	0.678
<b>Q18</b>	3.405	1.089	0.702
<b>Q19</b>	3.524	0.988	0.7
<b>Q20</b>	3.438	0.951	0.7
<b>Q21</b>	3.035	1.09	0.722
<b>Reliability alpha</b>	0.728		
<b>Standardized alpha</b>	0.731		

### **1.3. Total survey**

<b>Questions</b>	<b>Mean</b>	<b>SD</b>	<b>alpha</b>
<b>Q7</b>	3.333	0.992	0.806
<b>Q8</b>	3.346	1.024	0.805
<b>Q9</b>	3.125	1.042	0.805
<b>Q10</b>	3.466	1.235	0.802
<b>Q11</b>	3.803	1.03	0.813
<b>Q12</b>	3.264	1.376	0.803
<b>Q13</b>	2.856	1.421	0.798
<b>Q14</b>	3.744	1.102	0.815
<b>Q15</b>	3.193	0.953	0.809
<b>Q16</b>	3.058	1.222	0.804
<b>Q17</b>	3.006	0.993	0.807
<b>Q18</b>	3.405	1.089	0.817
<b>Q19</b>	3.524	0.988	0.817
<b>Q20</b>	3.438	0.951	0.817
<b>Q21</b>	3.035	1.09	0.814
<b>Reliability alpha</b>	0.819		
<b>Standardized alpha</b>	0.818		

## 2. Sample Size calculation

To calculate the sample size for the pilot study, the following equation was used.

$$n_0 = \frac{z^2 \times p(1-p)}{e^2}$$

<b><math>n_0</math></b>	-	Sample size, which was estimated
<b><math>z^2</math></b>	-	The selected critical value of the desired level of confidence or risk
<b><math>p</math></b>	-	The estimated proportion of an attribute that is present in the population or maximum variability of the population
<b><math>e</math></b>	-	The desired level of precision or margin of error

In our case, since the population number is unknown.

<b><math>n_0</math></b>	-	?
<b><math>z^2</math></b>	-	95% confidence level (The value of $(1-\alpha)$ in Standard Normal Distribution $z$ -table, which is 1.96 for 95%)
<b><math>p</math></b>	-	50% variability of the population (which is maximum)
<b><math>e</math></b>	-	5% margin of error

Put the value in the given formula-

$$n_0 = \frac{(1.96)^2 \times 0.5(1 - 0.5)}{(0.05)^2} = 384$$
